WITHDRAWAL OF THE INLAND EMIGRATION ACT FROM THE DISTRICTS OF CHITTAGONG AND THE CHITTAGONG HILL TRACTS.

GENERAL DEPARTMENT - INLAND EMIGRATION.

Calcutta, the 8th January 1889.

RESOLUTION.

READ—

The following correspondence on the subject of the proposed withdrawal of the districts of Chittagong and the Chittagong Hill Tracts from the operation of the Inland Emigration Act No. I of 1882:—

- Letter from the Commissioner of the Chittagong Division, No. 767GM—IX-5, dated 13th August 1888.
- Letter to the Superintendent and Remembrancer of Legal Affairs, No. 95T—G, dated 18th October 1888.
- Letter from the Superintendent and Remembrancer of Legal Affairs, dated 31st October 1888.
- Letter from the Superintendent and Remembrancer of Legal Affairs, No. 1098, dated 9th November 1888.
- Letter to the Government of India, Revenue and Agricultural Department, No. 186, dated 3rd December 1888.
- Letter from the Government of India, Revenue and Agricultural Department No. 284—26-24E., dated 21st December 1888.

The special procedure provided by Act I of 1882 for enforcing labour contracts in certain specified areas is in force, as far as the Lower Provinces are concerned, only in the districts of Chittagong and the Chittagong Hill Tracts. The Commissioner of Chittagong has frequently urged their withdrawal as not required in his division; and in reviewing the departmental report for the year 1885, Sir Rivers Thompson so far accepted this view as to express a hope that the time was approaching when, considering the falling off in the number of labourers enrolled under the Act, it would be possible to adopt the course recommended. As the results of the following year showed a further decline, Sir Steuart Bayley called for a special report on the subject, which the Commissioner has since submitted. In this communication it is stated that such planters as had been consulted are unanimous in considering that the Act is not required, the ordinary law being sufficient to guard the interests both of employers and employed. This is the view of the District Officers also, and the Commissioner gives his own opinion as follows :—

"It is not adapted to a district where labour is as plentiful as it is here, and where there is, now at least, no objection to taking work on a garden. So far as I have seen, the Act here is entirely against the interests of the cooly and of the better class of planters, while it is favourable to the worst class of planters only. Happily this last class is so small that it may be said to be non-existent. I strongly recommend, therefore, that under the provisions of section 4, the Inland Emigration Act be withdrawn entirely from the districts of Chittagong and the Chittagong Hill Tracts."

2. In deciding whether the recommendation thus forcibly expressed by the local officers should be accepted, the Lieutenant-Governor has to give due weight to the consideration that the Government of India has repeatedly indicated for adoption the policy of dispensing with special legislation on the subject of labour contracts wherever it is possible to do so, leaving the matter to the operation of the ordinary law of the country. "Such legislation," the Secretary of State observed in a despatch No. 102, dated 4th November 1886, "should be considered as temporary only, and clearly ought not to be maintained longer than is absolutely necessary for the protection of both the classes concerned." Viewed from this standpoint, it seems clear that the retention of the system in the two districts referred to scarcely admits of defence. In the Hill Tracts the Act cannot be said to be necessary, as it is not now resorted to even in the case of a single labourer. In Chittagong the number of labourers placed under contract according to the provisions of the Act was never large, and has rapidly decreased in recent years: it was 915 in 1884 and had fallen to 433 in 1887, with the prospect of a further decrease in the immediate future. There is nothing in the condition of the tea industry in Chittagong to suggest that it should be placed under an exceptional system, different from that prevailing in the rest of the province, and particularly in the districts of Darjeeling and Julpigoree, which are now the chief seats of the cultivation of the tea plant. Chittagong is more densely populated than other tea districts in Bengal, local labour is more generally used, and the importation of coolies is resorted to only on a very minute scale. The maintenance of the statutory contract system cannot, therefore, be looked upon as really a necessity in that district, and there is even reason to believe that, so far as it has any effect at all, it is rather a hindrance than an aid to the progress of tea cultivation. It certainly has not effected the object which the late Commissioner of Chittagong had in view when recommending its introduction in the year 1877—that of modifying the system of task work in the interest of the labourer.

3. The Inland Emigration Act leaves to the Local Government, with the previous consent of the Government of India, the power of altering from time to time the area within which the law is in force. The Lieutenant-Governor considers that this power should now be exercised, and accordingly issues the appended notification with the approval of the Governor-General in Council. The Superintendent and Remembrancer of Legal Affairs to Government has advised that this measure will not affect existing contracts otherwise than by putting an end to the exceptional procedure by which they are at present enforced, leaving them in operation as ordinary engagements within the cognizance of the civil courts.

ORDER—Ordered that a copy of this Resolution and of the notification be forwarded to the Commissioner of the Chittagong Division, with reference to the correspondence ending with his letter No. $\frac{7670 G.M.}{IX-5}$, dated 13th August 1888, for information, and for favour of communication to the Inspectors of Labourers and Managers of tea-gardens.

Ordered also, that a copy of the Resolution and of the notification be forwarded to the Superintendent of Emigration, Calcutta, for information.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

Dated Calcutta, the 8th January 1889.

NOTIFICATION—By the Government of Bengal, General Department.

UNDER section 4 of the Inland Emigration Act I of 1882, the Lieutenant-Governor of Bengal, with the previous sanction of the Governor-General in Council, is pleased to declare that, on and from the 1st April 1889, the labour-districts of Chittagong and the Chittagong Hill Tracts shall cease to be subject to the provisions of the said Act by which they are declared to be labour-districts, and to all the provisions of the Act applicable only to labour-districts.

RESOLUTION ON THE REPORT ON PUBLIC INSTRUCTION IN BENGAL FOR THE YEAR 1887-88.

GENERAL DEPARTMENT—EDUCATION.

Calcutta, the 11*th January* 1889.

RESOLUTION.

READ—

The General Report on Public Instruction in Bengal for 1887-88.

Delay in submitting the report.

This report is exceptionally complete and clear, but the Lieutenant-Governor regrets that it is necessary in reviewing it to notice in the first instance the delay which has occurred in its preparation. The date fixed by Government as the latest for the submission of the annual reports of the Director of Public Instruction was originally the 1st of August, and Sir Alfred Croft proposed during the year that it should be postponed to the 1st of October. The present report was not, however, received until the 17th December, and no explanation has been given of the great delay thus indicated. The Director's attention will be drawn again to this important subject, and he will be requested to make arrangements which will secure the submission of the next annual report before the 1st October, 1889, or on that day at latest.

Controlling agencies.

2. The most important event in the educational history of the year under this head was the transfer of the control of primary education from District Magistrates, acting under the advice of Local Committees, to District Boards. On this subject the Director observes—

As to the general character of the work done by the District and Local Boards, it is too early yet to form any decided opinion It was natural to suppose that at the outset they would take no very strong or independent line, but simply conform to the traditions and practices of the Department to whose duties they succeeded. It appears, however, that the Boards have not followed a uniform policy in educational matters. The Assistant Inspector of the Bhagulpore Division writes of them :—" During the short time they have been at work, there has been not a single instance of any friction between them and the Department ; the suggestions and recommendations of the inspecting officers have been always duly considered and adopted, and the Inspector of Schools has been often consulted in important matters." Still, some inconvenience has been felt from delay in the despatch of business by the Boards. In the neighbouring division of Patna a less confident note is heard. In the districts of Patna and Sarun, there have been no particular changes, and the working of the Board has been satisfactory. Of Gya it is said that " the Board has done nothing in connection with education that would look like its own work." But of Shahabad—" it is a fact that the Shahabad District Board has not worked smoothly with the Department."

In the few differences that I have had with District Boards, I have found that on a candid representation of the facts the causes of difference have in every case disappeared. When more serious difficulties have arisen, and some form of arrangement or compromise was desirable, it has been readily accepted When the Boards were, one after another, coming into existence and assuming charge of their duties, I sometimes found it necessary at the outset to trench upon the province of the Boards, and to take action which I had ceased to have the right to take, in order to avoid obstructive delay and to hand over the business of administration as a going concern in working order. In no case has a Board finally refused to confirm the action taken. On a general review of the causes of friction that have arisen here and there, I should be disposed to say that while Boards are grateful for advice and suggestions when asked for, and even when not asked for if given with an obviously helpful purpose, they resent interference with the duties that have been entrusted to them. In saying this, I do not wish to utter one word of complaint against any departmental officer. It is only natural that officers who have hitherto had the work of education in their own hands should

still take a keen interest in its progress, and should seek to avert any lapse from the standard to which they have been accustomed, even though such lapses are inevitable incidents of a change of system. But it is no less necessary for departmental officers to remember that District Boards have rights secured to them under the Act, and that any attempt to limit those rights in the interests of education will certainly be resisted. It may be assumed that officers of the Department know for the present a good deal more about school management than a District Board knows. They can best utilise their knowledge in the interests of education by adopting towards the Board such an attitude of friendly vigilance as will make it clear that, while always ready to render help when help is desired or is necessary, it is equally their wish that the Board should learn how to do for itself, and to do well, the work which has been entrusted to its hands. I am glad to be able to state that this is the attitude which officers of the Department have almost uniformly taken up.

The view taken by the Director appears very judicious, and its expressions calculated to conduce to the harmonious working of the department. It may be added that some of the officers whose views are quoted seem to have an erroneous conception of the system which has been superseded by the management of Boards. Primary education since its introduction has never been placed under the control of departmental Inspectors, but of Magistrates and local Committees. In one of the districts referred to as administered by a Board in an independent spirit, it is within the Lieutenant-Governor's knowledge that this is nothing new, the former Education Committee having shown even more decided indications of a determination to promote the cause of popular education in its own way.

3. Two vacancies which occurred during the year in the superior inspecting staff were not filled up, the retrenchment being made in accordance with a recommendation of the Finance Committee, provisionally adopted by this Government, that the number of such officers should be reduced to nine, so as to correspond with that of Divisional Commissioners. The officers whose work has in this manner been increased by enlarging their jurisdiction report unfavourably of the arrangement, as was perhaps to have been expected. But, apart from obvious considerations of economy, it seems desirable to make the jurisdiction of Educational officers coincide with the administrative divisions of the country, and nothing has occurred during the year to alter the Lieutenant-Governor's opinion as to the expediency of the retrenchment proposed. The Director has very properly noticed the degree of activity shown by different inspecting officers, commending those who have done best, and dealing in different ways with those who have failed Such disciplinary action is particularly necessary, since the travelling allowance drawn for journeys of less than 20 miles has been curtailed on financial grounds, and the Director plainly indicates that tours have often been conducted inefficiently in order to secure the higher rate now given in the case of long journeys, or, as it is otherwise put, to avoid loss. The amendment of the rule which has been the occasion of this difficulty is now under consideration, a reference having been made to the Government of India; but, pending the issue of orders on this subject, the defect noticed by the Director may be remedied by calling upon Sub-Inspectors to submit beforehand programmes of their tours, which will then be regulated by their immediate superiors in the best interests of the schools to be visited. The Director will be requested to report upon the above suggestion.

University Education.

4. The history of higher instruction during the year is marked by three striking features—the foundation of new colleges, the increased attendance of pupils, and the development of private enterprise, which at first supplemented, and now rivals the efforts of the State in promoting this form of education. The new colleges are four in number—the Bangabasi, founded by Mr. G. C. Bose, M.A., F.C.S., a returned Agricultural Scholar, which had 53 students at the close of the year; the Roberts' Memorial College, with 3 students only; the Tej Narain Jubilee College at Bhagulpore, with 17 students; and the collegiate classes added by the late Baboo Joy Kissen Mookerjea to the Utterpara School, with 29 students. All these are private institutions, founded and kept up without direct aid from the State, and their establishment raises the number of

colleges in Bengal to 33, of which only one-third are maintained by Government. The increase in the attendance is shown in the following statement :—

Some annual addition to the number of students is to be expected as the natural result of the gradual progress of the educated classes in Bengal. The fact that the increase was unusually large this year is, as the Director remarks, explained by the results of the Entrance examination of 1887, at which 2,409 competitors were successful, or 69 per cent. of the candidates, against 913, or 29 per cent. in the previous year; and it is understood that this success was itself due to an alteration in the system of examination designed to facilitate admission to the University, the number of marks required for success being reduced from 33 to 30 per cent. in English, and from 33 to 25 per cent. in the second language and mathematics, while the aggregate minimum of 33 per cent. was not insisted on. The development of private enterprise, referred to above, as the third feature of college administration during the year, is illustrated by the fact that the increase has been greatest in the unaided colleges, both

absolutely and also in proportion to their previous attendance. With the figures showing the numerical strength of the several classes of institutions, the following statement should be considered, as it indicates their efficiency, ascertained by the only test readily applicable, that of success at public examinations—

Class of College.	Number of students.	Number of students passed at examinations in 1887-88.				
		F. A.	F. A. Scholarship.	B. A.	B. A. Honours.	M. A.
State	1,383	183	28	68	43	27
Private	3,111	287	23	152	42	13

It will be seen that the Government colleges, with reference to the number of their pupils, obtained more than their share of degrees of all kinds, and that the proportion in their favour was larger as the examinations progressed in difficulty. This is most marked in the M. A. course, and is there entirely due to the superior instruction given in the Presidency College, a most useful and necessary institution, which maintains by its example, as well as by direct support, the standard of education in the province. The Director's observations on this subject are in entire accordance with the views entertained by Government. He writes: "The Presidency College, with its high fee of Rs. 12 a month, has nearly doubled its numbers of two years back; and indeed in July, 1888, four months after the close of the year, the number on its rolls exceeded 500, a greater strength than it has ever before known. The demands made by the various courses of the University upon a limited educational staff have much increased of late years; and if, in accordance with the present policy, the strength of the Presidency College professoriate be maintained at such a level as to meet all requirements, the foregoing figures show that students will flock to its classrooms in such numbers as to more than repay the additional cost involved. The Presidency College must maintain its position among the colleges of Bengal as that in which the best and most varied education is given, realising as far as possible the idea of a 'teaching University.' That end must be secured even though, in order to attain it, we have to weaken the staff of some of the less important Government colleges in the province. Moreover, the rapid up-springing of private colleges throughout Bengal affords a clear proof that collegiate education to a moderate standard no longer demands the sustaining arm of Government as the necessary condition of its existence; and the policy to which I have adverted will render the gradual transition from Government control to private management a natural and easy process of development." The Presidency College is also the principal institution in which scientific knowledge is fostered, a very important consideration, as it appears that the science course is losing its popularity, and that higher education in Bengal is taking a character too exclusively literary. It has long been the policy of Government to give a practical bent to instruction, and yet, whether from the effect of the system on which University examinations are conducted, or owing to the predilections of the students themselves, the actual tendency is in the contrary direction. It is stated that of 51 senior scholars elected in 1888, only 21 chose the science course, which in former years was adopted by the great majority, and only 78 candidates passed by that standard, against 245 by the literary course. Even in the minor Government Colleges, where until lately the science course only was taught, it is now to a great extent superseded by the more popular form of instruction. The Krishnager Municipality was asked during the year to take over the Government College at that station, with a grant-in-aid, and the offer was declined. The Lieutenant-Governor can hardly view with regret the delay which has occurred in giving full effect to the policy recommended by the Education Commission, that of the gradual and cautious withdrawal of the State from the direct management of the minor colleges, as private institutions become year by year more equal to the task of conducting collegiate instruction. It is, however, well that those interested in higher education should understand that the policy in question has been accepted, and that the work of carrying it out, of which a beginning has been made in the case of the Berhampore and Midnapore Colleges, will eventually be completed.

Secondary Education.

5. The progress of secondary education during the year, as indicated by the multiplication of schools and the increased attendance of pupils, has been substantial and satisfactory, though it has not been as great as that made in collegiate instructions.

The following statement defines its extent :—

Class of Schools.		1886-87.		1887-88.	
		Schools.	Pupils.	Schools.	Pupils.
High English	... ...	272	61,227	292	67,430
Middle "	... ...	718	51,134	745	54,651
" Vernacular	... ...	1,157	64,478	1,189	67,022
Total	...	2,147	176,839	2,226	189,103

The expenditure of Government under this head was Rs. 5,17,235 in 1886-87, and increased in 1887-88 by the sum of Rs. 16,057. The Director notices that applications for new grants have been accumulating for the last two or three years, and observes that it is much to be wished that Government were in a position to afford more liberal aid. This is doubtless desirable, but the fulfilment of the wish is very improbable, considering not only existing financial conditions, but also the more urgent claims of primary and technical education. Under the circumstances, it is necessary to draw attention to the rule on the subject of grants-in-aid, quoted in the margin, which was framed to prevent existing grants from becoming permanent, and so preventing the concession of new grants in rising localities. It is not to be supposed that Government will be able to maintain all old grants-in-aid indefinitely, and at the same time to make new allowances from year to year.

Grants will be sanctioned ordinarily for a term of three years; but the Inspector may at any time during its currency recommend the revision of any grant. A grant should ordinarily be reduced on renewal, when this can be done without serious loss of efficiency. In this way money will, from time to time, be set free, and the Department will be able to aid new schools even though the grant-in-aid allotment remains stationary. Notice of any proposed reduction shall in all cases be given to the managers, who shall be allowed an opportunity of stating any objection that they may have to the reduction.

6. It is chiefly in connection with schools of the secondary class that the question of moral training and the maintenance of due discipline occurs. Under this head the Director observes—

"The question of school discipline continues to occupy the attention of the higher officers of the Department, and the subject has been discussed at length in a report recently submitted to Government. A school mainly dependent for support on the fees paid by its pupils is at times compelled to tolerate breaches of discipline which a well-endowed institution can punish without fear. In Bengal the number of educational institutions of really independent position is by no means large. The admittedly superior discipline of a Government or of a missionary school is justly attributed to its solvency."

By way of diminishing the evil noticed, he suggests that the Calcutta University should refuse to recognise any school until it has been two years in existence, and until the managers have supplied full particulars of the establishment and accommodation to be provided. Such a measure might do some small good; but as the only effect of the non-recognition of a school by the University is that its candidates at the Entrance Examination are entered as private students, no great result can be expected. The Lieutenant-Governor will be glad to receive in future reports a fuller account of the discipline and moral training enforced in public schools. The importance of the subject is undeniable, but, in the absence of provision for periodical notice, it may frequently be overlooked

Primary education.

7. There has also been some slight progress in the department of primary education, the number of schools having increased from 48,483 in 1886-87 to 48,621 in 1887-88, the number of pupils from 1,080,085 to 1,103,422; but here the gain in numbers is comparatively small, and does not compensate for a loss which occurred in 1885-86. Practically, primary education in Bengal has reached a stationary state, and such variations as occur from year to year in the numbers are due rather to alterations in the system of registration than to any real advance or retrogression. The Provincial Government has not in recent years been able to make any increase in the assignment under this head, and there is not, as in the case of English education, a spontaneous tendency to the spread of elementary instruction, irrespective of Government assistance, beyond the classes which it at present reaches. With regard to the point which has hitherto been attained

in the education of the people generally, the Director of Public Instruction writes—

"The population of Bengal, excluding Cooch Behar, Hill Tipperah, and the Tributary States of Chota Nagpore, of which the schools are not included in our returns, amounted by the last census to 68,160,598, of whom 33,917,217 were males, and 34,243,381 were females. Reckoned at the usual proportion of 15 per cent., the number of male children of school-going age would be 5,087,582, and the number of female children 5,136,507. Of the scholars in our returns, 1,362,119 are boys and 90,826 are girls. Hence, of all boys of a school-going age over one in four is at school; of girls, 1 in 56. It has recently, however, been argued that 20 per cent. more nearly represents the proportion of children of school-going age. As the number of towns and villages in Bengal is close upon 260,000, it appears that there is one school to every four villages."

The estimate that one boy in every four is at school indicates how much remains to be done, as it implies that three-fourths of the male population have not as yet been touched by our educational system: and there is reason to believe that the estimate itself is sanguine. If the school-going age be taken as from five to fifteen the proportion of children which it includes is not 15 or even 20, but 26·93 per cent. The population must have increased since the census of 1881, and there is reason to believe that the figures given, which are taken from the return of those on the rolls at the close of the year, include many children who never attend or never learn. Out of more than 1,100,000 pupils registered, only 330,921 were examined under the system of payment by results, of whom 199,880 were passed. The census report showed only one male in ten as able to read and write. The Lieutenant-Governor regrets the depletion of Provincial finances on no account more strongly than because it prevents him, at least for the present, from carrying out the recommendations of the Education Commission in regard to primary education, which included a considerable increase in the annual expenditure.

8. The total expenditure from Provincial and District Funds on primary education during the year was Rs. 6,82,089, against Rs. 7,36,243 in 1886-87, the decrease of Rs. 54,154 being apparently due to delay in payments, which caused large sums due in 1887-88 to fall over into the following year. There was certainly no desire on the part of Government to make the transfer of these schools to District Boards an opportunity for diminishing the grant, which was founded on the actual expenditure of 1885-86. The Director observes that "the total amount contributed by municipalities to the support of primary schools was Rs. 16,355, varying from Rs. 7,805 in the Presidency Division, Rs. 2,815 in Patna, and Rs. 1,968 in Burdwan, to smaller sums in other divisions. In the 24-Pergunnahs the municipal contributions fell off by Rs. 1,182. The new Municipal Act for Calcutta contains a section empowering the Commissioners to spend money on primary and technical schools." The Lieutenant-Governor notices with approval these contributions from municipal resources, considering the importance of popular education to be such that it has a fair claim to aid, even from an income on which there are numerous and urgent demands. The mofussil municipalities benefited at the expense of provincial funds to the extent of over three lakhs of rupees a year, when the police charges in urban areas were assumed by Government from the beginning of the year 1882, and it was then assumed that a part of the surplus thus created would be devoted to education.

9. The following statement shows the manner in which the available funds were utilised in the different divisions:—

Divisions.	Schools.	Pupils.	Expenditure.	Cost per school in rupees.	Cost per pupil in annas.
			Rs.		
Presidency	4,284	125,460	82,268	19 2	10·4

Orissa Tributary Mehals ...	89	1,274	1,850	20 7	23 2

The amount for expenditure being so limited in comparison with the population to be educated, it is of the utmost importance that the method should be adopted which produces the greatest effect at the smallest cost. Experience has shown that this system is for Bengal what is known as that of payment by results, as distinguished from the grant of fixed stipends to teachers, and the rules made for the guidance of District Boards recognise no other as permissible. These instructions appear to have been generally observed, except in the district of Rajshahye, as to which the Director states that the Board have during the past twelve months raised the cost of each school from Rs. 16·5 to Rs. 56·3 a year by the adoption of a system of stipends all round, in substitution of a mixed system of stipends and rewards. The number of schools in Rajshahye has at the same time been reduced from 578 to 291, that of pupils from 11,901 to 7,490. The Director was informed in December last that the change thus made was inconsistent with the rules, and he will now be asked to report what action has since been taken to place the administration of the grant in Rajshahye on a proper footing. A stipendiary school costs five or six times as much as one conducted on the principle of payment by results, and a general reversion to the former principle could only be interpreted, under present financial circumstances, as the abandonment of the attempt to give an elementary education to any considerable proportion of the population. In the 24-Pergunnahs, Moorshedabad, Midnapore, Hooghly, Howrah, the regulation districts of Chittagong, Shahabad, Sarun, Purneah, and Cuttack, the average cost of schools to Government has been kept below ten rupees a year. This economy can only have been obtained by a careful and intelligent adoption of small means to a great end, in particular by utilising to the utmost all indigenous methods and institutions. It is believed that results not dissimilar might be produced in some other districts, and the subject needs the most careful consideration on the part of the Educational authorities.

Special instruction.

10. There are in Bengal 37 institutions for imparting special instructions in some profession, art, or industry, as distinguished from the general education more commonly sought. Some details as to their strength are given below:—

	Number of institutions.	Number of pupils on the rolls on the 31st March 1888.	Average monthly roll number.	Expenditure— From public funds: From Provincial revenues.	From Municipal funds.	From private funds.	Total.	Average annual cost of educating each pupil: Cost to public funds.	Total cost.

IV.—Art and Industry.									
Government School of Art ...	1	158	148	24,978	......	3,168	28,146	168 12 3	190 2 9
Government Industrial Schools.									
Ranchi Industrial School ...	1	41	25	1,200	.....	600	1,800	34 4 6	51 6 10
Aided Industrial Schools ...	7	307	204	1,195	511	4,467	6,173	5 12 10	21 0 0
Unaided Industrial Schools ...	5	171	152	......	....	761	761	......	5 0 1
Total Art Schools ..	14	677	629	27,373	511	8,996	36,880	44 5 3	58 10 1

It will be observed that the law students are far the most numerous, that, excepting a small and decreasing minority, not constituting a ninth of the whole, they read in unaided schools, and that they cost the public nothing even when they attend Government schools. These facts and the increase in the number of law students illustrate the popularity of the profession, and its profitable nature. The study of medicine on the other hand, at least on the ordinary lines, is confined to Government institutions, and in its higher department is proportionately very expensive to the State, each student costing Government Rs. 877-8-1 a year, a sum far in excess of that reported in regard to any other form of instruction. The number of pupils in the Medical College has diminished from 172 last year to 160, though there has been an increase of ten in the free female class. On the other hand, the schools where instruction is given in the vernacular are advancing in number and reputation. There has been an increased attendance in the Engineering College, Seebpore, but it is marked as an unfavourable sign that only one student from that institution passed for the B. E degree. The condition of this most important school has formed the subject of enquiry during the year, with special reference to the small success which has attended it at the University examinations, and the report of the Committee appointed to investigate the subject has been very recently received by the Director of Public Instruction. The survey schools have done well during the year, and their pupils readily find employment. The number of pupils in the Government School of Art increased from 152 to 158. As to this valuable institution, which is somewhat of the nature of a technical college, the Director writes—

"In July, 1887, a revised course of instruction was framed for each class. Arrangements have also been made to hold annual examinations in free-hand drawing, model-drawing geometry, and perspective. Art certificates of the third or higher grade will be awarded to those students who execute the prescribed works in each class and pass the required examinations in each group These groups comprise advanced free-hand and light-and-shade drawing, elementary painting and design, advanced painting and drawing, architectural and mechanical drawing, and modelling. Certificates of proficiency will also be granted to competent students in the lithographic, wood-engraving, metal-chasing, and wood-carving classes. Four annual scholarships have been established by the Public Works Department for competition by students in the architectural and mechanical drawing classes. The successful students, after completing the preliminary course in the school prescribed by the Public Works Department, will have the advantage of one year's practical work in the drawing branch of the Chief Engineer's office, with an allowance of Rs. 15 a month each for the first six months, and an increase of Rs. 5 a month if satisfactory progress is made. There were seven competitors for the studentships, whose works were submitted for examination to Mr. W. Banks Gwyther, A.R.I.B.A., who expressed his satisfaction with the quality of the work done by this newly-inaugurated class.

"Their Excellencies the Viceroy and the Countess of Dufferin visited the school on the 27th March, 1888. His Excellency was pleased to award a silver and a bronze medal for competition: 'the silver medal to be awarded to the student who, at the end of the year, has executed the best series of works in any of the classes.'

"Mr. Jobbins reports that, as a result of the practical character of the instruction now imparted, the students are finding remunerative employment One has lately been appointed head-draftsman in the office of the Engineer-in-Chief, Sind-Pishin State Railway."

The industrial schools are conducted on a small scale, aiming at little more than the teaching of ordinary mechanical arts to a limited number of pupils of the artisan class; but on the whole they did well during the year. It may be said generally that the few technical institutions which exist in Bengal hold their own, without any marked advance or retrogression, being in this respect less successful than the colleges and schools for English education, which progress rapidly, though receiving much less assistance from Government. This remark does not apply to the law classes, which flourish of their own vitality, without assistance from the State. The question of promoting technical education in new directions has been examined during the year by the Seebpore College Committee, and will come before Government again when the report of that body is received with the remarks of the Director of Public Instruction. All schemes for instruction of this class involve considerable expense, and it has not been thought necessary to expedite their examination during a season of financial pressure.

11. The Lieutenant-Governor notices with satisfaction the statement of the Director of Public Instruction that the medical education of women made a decided advance

Female education.

during the year. In the Medical College five young ladies were reading as regular students for the L.M.S. or M.B. degree, and one of them (Miss Virginia Mitter) headed the list of successful candidates at the first M.B. examination. Besides the regular students, 21 young ladies attend lectures in the Medical College for a special certificate under the new regulations. A class for instructing females through the medium of the vernacular was opened in June, 1886, in the Campbell Medical School, and is attended by 15 students. The progress of female education generally is indicated by the figures given below:—

	1886-87.		1887-88.	
	Schools.	Pupils.	Schools.	Pupils.
Girls' schools	2,198	43,290	2,247	46,038
Girls in boys' schools ...	......	37,764	......	37,785
GRAND TOTAL ...	2,198	81,054	2,247	83,823

The Director draws attention to the fact that the greatest numerical results are produced in this department by rewarding the teachers of primary schools for the attendance of girls. He observes that "a grant-in-aid girls' school costs Rs. 178 a year, while a primary grant school costs only Rs. 20. There is no limit to the number of girls that can be educated in boys' schools, if the District and Local Boards, in whose hands the administration of the primary grant now rests, find it possible to maintain and increase the existing rates of aid." There has been a most satisfactory advance in the number of girls under instruction in the Dacca and Patna Divisions, counterbalanced, to some extent, by a falling off in some other divisions. In the higher walks of female education it is noticed that the Bethune College, the Free Church Normal School, and the Doveton Institution for Young Ladies, sent up successful candidates for the Entrance Examination of the Calcutta University, while the Bethune College also passed two candidates at the B.A. Examination.

Education of Europeans.

12. The number of European schools remained the same as in the previous year, being 72 in all; there was an increase in the attendance from 6,391 to 6,541. The Government expenditure under this head was Rs. 1,73,018 against Rs. 2,50,367 last year, the decrease being in the grants for buildings. The effort which has been made for some years to give to the education of Europeans a more practical turn, by substituting a special examination for that of the Entrance to the Calcutta University, has entirely failed, not a single boy having appeared as a candidate. It is evident that the authority of a University having a monopoly of the power to grant degrees is sufficient to regulate the course of study in all Bengal schools, of whatever class, and this is an additional argument in favour of introducing an alternative standard, adapted to the requirements of those who need a practical rather than a literary education. The allowances to high schools continue to be regulated by a very minute system of payment by results, involving the examination by a Government Inspector of every boy in every subject. The success of the schools may be roughly gauged by the percentage earned of the total possible grant, which was 73 per cent., a great improvement on the results of the previous year. This progress is, however, attributed in part to a change in the system of marking.

Education of Muhammadans.

13. The Director notices that there has been a satisfactory increase in the attendance of Muhammadans at the higher institutions of instruction. In Arts colleges such pupils have increased from 138 to 217; in English schools, from 13,218 to 14,864; in middle vernacular schools, from 9,053 to 9,860; and besides this absolute increase, the percentage is in each case higher than last year. The total number of Muhammadan students also rose from 366,886 to 401,671, and the percentage from 26·9 to 27·6, figures to be compared with the percentage of 31·5 borne by Muhammadans to the whole population of Bengal; the apparent improvement is not, however, due to any real development, but to the correction of an error made during the last two years in the method of registering certain Koran schools, which were removed from the aided list, without being placed on that of private institutions. There is still some doubt as to the expediency of the course adopted in withdrawing

aid from these schools, and the matter is under consideration The appointment of two Muhammadan Assistant Inspectors, which has been sanctioned for some time, and is now to be immediately carried into effect, will afford facilities for considering such questions from the Muhammadan point of view. Three scholarships were founded in July, 1886, of Rs. 20 a month each, tenable for a year-and-a-half, by any student of the Calcutta Madrassa who has obtained the B.A. degree with honours. This raises the total number of special Muhammadan scholarships to 134. The attendance at Madrassas generally increased from 1,120 to 1,229, in the Calcutta Madrassa (Oriental Department) from 339 to 362. The total number of students in the Calcutta Madrassa was 1,183 against 1,119 in the previous year. A change has recently been effected in the constitution of the College Department of the Madrassa, which, it is hoped, will give the students the advantage of the superior tuition of the Presidency College, without depriving them of the special attraction of a denominational institution.

General summary.

14. The progress made in the extension of education of all kinds during the year may be gathered from the following statement of the number of enrolled pupils:—

	1887.	1888.	Increase per cent.	Decrease per cent.
In public institution—				
Colleges	4,611	5,990	29·9	.....
Secondary schools	184,319	196,694	6·7	...
Primary schools	1,122,286	1,148,410	2·3	...
Special schools	5,378	5,195	......	3·5
Total ..	1,316,594	1,356,289	3·01	..
In private institution—				
Advanced	30,122	31 140	3·3	.. ...
Elementary	5,492	30,309	451·8	......
Teaching the Koran only ..	......	32,773	......	....
Other schools	9,894	2,434	.....	75
Total ...	45,508	96,656	12·3	......
GRAND TOTAL ...	1,362,102	1,452,945	6·6	......

It is observed with satisfaction that there has been an improvement in the general result, and also in all the more important departments.

15. The thanks of the Lieutenant-Governor are given to Sir Alfred Croft for his able management of the Education Department during the year.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Govt. of Bengal.

THE following report is published for general information.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPT., P. NOLAN,
The 10th January 1889. *Secy. to the Govt. of Bengal.*

METEOROLOGICAL SUMMARY OF THE MONSOON PERIOD OF 1888.

THE following statement is intended to give a very brief history of the more important features which have characterised the south-west monsoon period and the preceding months of 1888 in Bengal.

The month of January was of ordinary cold-weather character, and was rather free from the influence of land-formed storms, for, up till the 22nd, no depression affected the weather in the province. From this date the usual conditions were almost reversed in Bengal by the formation and advance of a depression from Northern India. The storm first made its appearance to the south of Quetta and west of Jacobabad on the 20th, having apparently been already fully formed before it crossed from Afghanistan into India. It then travelled through Central India and passed through the south of the province of Bengal, entering the Bay of Bengal near Gopalpore and crossing it to near Akyab, when it again passed inland or disappeared. As the result mainly of this storm, rainfall was decidedly heavier than usual in Chutia Nagpur, South Behar, Orissa, South-West Bengal and East Bengal, though it was below the normal in North Bengal and North Behar. Pressure was also above the normal by 0·033 inch, while temperature was below it by nearly a degree and a half. Humidity was also slightly below the normal, while on the other hand cloud proportion was above it.

In February two feeble low pressure areas drifted across Bengal in an easterly direction, which gave rainfall mainly to Chutia Nagpur and Orissa, and South-West and East Bengal, which divisions received falls in excess of the normal. Smaller amounts of rain than usual fell in North Bengal, while Behar was practically rainless. Pressure in February was practically normal, and temperature about one degree above it, and the normal steady rise in temperature during the month was clearly marked. There were also as usual some remarkable oscillations of humidity, due to the occasional setting in of moist sea winds from the head of the Bay, and their subsequent retreat on being driven back by the land winds.

In March there was again the usual continued rapid rise of temperature, and the mean temperature of the province at the end of the month was nearly 10° higher than at the commencement, while temperature remained about one degree above the normal. Two periods of disturbance, during which hot-weather storms or nor'-westers were numerous, also existed during the month, and these gave rainfall heavier than the normal to North Behar, North Bengal and East Bengal, while the falls in Chutia Nagpur, South Behar, South-West Bengal and Orissa were comparatively small and below the normal. Some of these storms were very intense, and probably two of them were of the nature of tornadoes. The first of these was on March 27th at Magura in the Jessore district, which did a moderate amount of damage, and the second was on the same day in the Pubna district, when several villages were much affected by it. Pressure in March was almost normal, while humidity and cloud proportion were somewhat below it.

In April ordinary hot-weather conditions prevailed for the first few days, and a few ordinary nor'-westers only were recorded up till the 7th, when one of the most violent storms on record in India occurred, Dacca being visited by an extremely fierce tornado at about 7 o'clock in the evening of April 7th. The breadth of the tornado path was about 200 paces, and the length about three and a-half miles, and it caused 118 deaths, while 1,200 persons were somewhat severely wounded. After the occurrence of this storm ordinary hot-weather conditions continued up till about the 18th, when again a period of disturbance set in accompanied by local storms or nor'-westers, which lasted up till the close of the month. Again, one of these storms was of the nature of a tornado, and Bhudressur, a small town close to Serampore, was partially demolished at about 8 p.m. on April 23rd, when several persons were killed and many injured. The rainfall brought up by these disturbed conditions was in excess of the normal amount in South-West Bengal, East Bengal, North Bengal, and North Behar,

while it was below the normal in Orissa, South Behar, and Chutia Nagpur. Pressure was also no less than 0·042 inch below the normal, while temperature was about half a degree above it.

In May there were three periods during which the weather was disturbed, and when local storms with rain occurred: the first period was for the first two or three days of the month, the second from the 6th to the 10th, and the third from the 16th to the end of the month, but except in North Behar, where rainfall was normal in amount, all divisions reported a rainfall rather decidedly in defect of the normal, the defect in South-West Bengal, Chutia Nagpur, and South Behar being large.

Up till the end of May therefore the general meteorological conditions in Bengal had not differed to any very large extent from the normal, and in the south of the Bay the first advance of south-west monsoon winds had been reported from the Ceylon stations on about the 8th and 9th of May, and in front of this advance a small cyclonic storm was formed, which crossed the Madras coast. This advance, however, does not appear to have progressed very far up the Bay. The second advance commenced about the 17th of the same month, and lasted about five days, as shown by the high wind velocities at the Ceylon stations, and it would appear that in this advance the monsoon winds reached about the centre of the Bay when they again died away. The third advance of the monsoon current commenced in the south of the Bay on the 27th, and very strong winds were reported at the Ceylon stations up till the 1st of June, and fairly strong winds for some days afterwards. This represented a very powerful advance of the monsoon current, and it is probable that squally unsettled weather obtained over the whole of the centre and south of the Bay at this time. This afterwards developed into a diffused depression, which advanced towards the west coast of the Bay, reaching the South Orissa coast on the morning of the 5th, and in its advance over the land it brought up moderate general rain to a large part of the province, which continued up till the 9th and 10th of the month. At this time all the meteorological conditions appeared favorable for the early setting in of the rains, and under ordinary circumstances the next advance of monsoon winds would have drifted over the province and the regular rains would have broken. But though strong winds continued to be reported in the south of the Bay, particularly for some days about the 6th, again from the 17th and from the 21st, indicating that there were successive waves of strong monsoon winds passing up the Bay, yet rainfall remained practically absent from Bengal from about the 10th up till the 27th to the 29th of the month. The cause of this almost complete stoppage of the progress of the rain-bearing current towards Bengal appears to have been that a feeble but very persistent area of comparatively low pressure with disturbed conditions generally existed at this period in the centre of the Bay off the Arakan and West Pegu coasts. This was accompanied by a feeble but distinctly marked whirl or cyclonic circulation of winds, and this had the effect of deflecting the rain-bearing current in an easterly direction towards Burma and Assam. This area of depression from the Bay apparently advanced over South-West Bengal at the end of June, and at the same time the monsoon current from the Arabian Sea began to make itself felt in Bengal, and general and rather heavy rain set in from June 27th to the 29th, and the rains may thus be said to have broken at this date or at least a fortnight later than the usual date for their commencement.

During this almost rainless interval, from the 10th to the 27th, a period of excessive heat set in over Bengal, and at some stations temperatures were most exceptionally high—higher than ever before recorded. At Calcutta, in particular, a temperature of about 1·2° higher than ever previously known at that station was registered. At many stations also during this period the mean temperature was from 10° to 15° higher than the normal for the period. Thus for June the mean temperature was generally rather largely in excess, while pressure was in distinct defect. The rainfall in June over the province averaged less than half the normal amount, and in such divisions as Orissa, Chutia Nagpur, and South Behar, it was only about a third of the normal. In this month rainfall was exceptionally deficient in the districts of Cuttack, Maldah, and Hazaribagh.

In July the south-west monsoon current was particularly strong, and the general rainfall of the province was nearly twenty per cent. in excess of the normal fall. The only division, indeed, which received a diminished fall was Orissa, where the actual only equalled about four-fifths of the normal, but in South-West Bengal, Behar, and Chutia Nagpur the falls were particularly heavy. Very large defects were in July again reported in the rainfall of the Cuttack district, while in the Pooree district the fall was less than half the usual amount. In North Bengal also the Bogra and Rungpore districts reported rather considerable defects. In this month three barometric depressions and one small cyclonic storm were formed. Two of the depressions were generated over the land and the third close to the Sunderbuns, while the small cyclonic storm formed in the centre of the Bay and crossed the Orissa coast between Pooree and Gopalpore.

In August, again, the monsoon current, as judged by the heaviness of the rainfall brought up by it, was exceptionally strong, and, generally speaking, the rainfall of the whole of the province was about 40 per cent. in excess of the normal. So heavy in fact was the rainfall in this month that in most districts the deficiency in the rainfall caused by the serious retardation of the monsoon current in June was more than neutralized, and the rainfall for the year up to the end of August was above the normal in all districts except North Bengal. Notwithstanding the heaviness of the general rainfall in August, the Purneah and Julpigoree districts received falls largely in defect of the normal, while in Rungpore, Cooch Behar, Darjeeling, Chumparun, and Durbhanga the falls were in moderate defect. On the other hand, some districts, such as Cuttack, Howrah, and Gya, received falls more than twice the normal. The falls in Orissa, South-West Bengal, and South Behar were in fact particularly heavy, and were partly brought about by the passage of a cyclonic storm which was generated over the Sunderbuns on the 19th, and passed through South-West Bengal into South Behar, breaking up in the North-West Provinces on the 29th. Besides this cyclonic storm, there were also two influential and two smaller and rather feeble depressions which influenced the province, three of which formed over the north-west angle of the Bay and part of South-West Bengal, and advanced in a north-westerly direction, while the fourth formed in North Bengal and moved in a westerly direction across the whole of India, only breaking up in the Runn of Cutch. In August pressure was decidedly in defect of the normal, while temperature was also rather lower than usual.

In September the monsoon current weakened much more rapidly than usual, and the total rainfall of the month was only equal to about three-fourths of the normal amount. In addition to the lightness of the rainfall, the greater part of the rain was received during the first half of the month, and rainfall was generally very light for the second half. Indeed, in some districts rainfall had entirely ceased before the close of September. Thus in Behar the south-west monsoon rains almost entirely ceased from about the 27th, and the same was to a great extent true in Chutia Nagpur. The largest defects in this month were reported in North Bengal and North Behar, where the falls were only from one-half to two-thirds of the normal amounts, while in the Pubna, Cooch Behar, Purneah, and Mozufferpore districts the falls varied from only one-half to one-third of the usual amounts.

Three depressions were formed over the Bay in this month—the first two were unimportant, and they occurred during the first seven days and gave moderate rain only, but the third was a very noticeable storm, and it lasted from the 12th to the 20th. This storm apparently originated in the Gulf of Siam, and it crossed from that place to the north of Tavoy into the Gulf of Martaban as a well-formed cyclone. It then crossed South Pegu a little to the north of Diamond Island, strengthening rapidly in its advance, and then advanced across the Bay of Bengal, striking the Orissa coast near False Point, and as it approached the land the velocity of advance of the storm was probably at least 20 miles an hour. The storm then passed through Orissa and afterwards advanced, first in a north-westerly and then in a northerly direction, finally breaking up in the Mussoorie and Simla Hills on the 20th or 21st. It brought very heavy rain in the line of its advance.

When the effects of this storm passed away, the monsoon current rapidly retreated from the province and commenced to retreat down the Bay, so that at the end of September practically no rain was falling. In front of the retreating current, however, a cyclonic storm of moderate intensity was formed near Diamond Island on October 1st, and this very slowly advanced up to the head of the Bay, striking the coast near Burisal on the night of the 6th, and then advancing in a north-easterly direction. This storm brought heavy rain to East Bengal, which received almost its normal fall for October; but in all other districts rainfall was much below the normal, the falls generally varying from a quarter to a third of the normal amount. In South-West Bengal, Orissa, and Chutia Nagpur, moderate showers fell in the early part of the month up to about the 7th, but the falls in North Bengal and South Behar were particularly scanty, and in North Behar practically no rain at all fell. Even the falls which were received were less valuable than they might have been, from the fact that they were confined to a few days only in the early part of the month, and rainfall was practically absent over the greater part of the province from the 7th, though a few showers fell in Chutia Nagpur and parts of South Behar on the 28th and 29th. It must also be added that general rain commenced to fall in the south of Orissa at the end of October.

In previous years it has been the custom to close the review of the monsoon season with the meteorology of October, but in the present year the meteorology of November has been so important that it is desirable to state briefly the general conditions during this month. At the close of October a violent cyclone was formed in the south of the Bay, which passed almost over Madras on the 31st, crossing the peninsula into the Arabian Sea. The wave of moist winds accompanying and following the cyclone then advanced up the west coast of the Bay of Bengal, and gradually and slowly spread over Bengal. This moist current gave moderate rain to Orissa from about the 30th October to the 14th of November; moderate rain to South-West Bengal from the 9th to the 14th; and moderate rain to East and North Bengal on the 14th November; and light, but rather local, rain in South Behar and Chutia Nagpur from the 12th to the 14th. The moist winds then retired, but at the end of November a land-formed disturbance from Upper India drifted over the province, and good general rain was received over practically the whole of Behar on about the 28th or 29th. All divisions therefore received fairly general, and in some cases rather heavy, rain in November, and the falls in all divisions, except East Bengal, were largely above the normal. Orissa received an average fall of nearly three inches, South-West Bengal one of about one and-a-half inches. In North Bengal, East Bengal, South Behar, and Chutia Nagpur the falls averaged from about four to five-tenths of an inch, but in North Behar the average was only about two-tenths. The districts in which the falls were smallest in November were—Chittagong, Noakholly, Durbhunga, Chumparun, Mozufferpur, Sarun, Backergunge, and Rajshahye.

The most important features of the monsoon season of 1888 and of the months preceding it in Bengal have been—

1. The occurrence of several tornadoes of an extremely violent type during March and April.

2. The general rainfall was fairly normal in character for the first five months of the year, *i.e.*, nearly up to the usual date of the commencement of the true rainy season.

3. There was a period of exceptionally intense heat in June owing to the serious retardation of the rains.

4. The advance of monsoon current took place at about the usual period in the south of the Bay; but owing to the existence of an area of barometric depression off the Arakan and Pegu coasts, the monsoon winds were deflected towards Burma and Assam during the greater part of June, and the true rains did not break in Bengal until the 27th June, or rather more than a fortnight later than usual.

5. The rainfall current was very strong during July and August, and gave exceptionally heavy rain.

6. The monsoon current was very light in September, and retreated more rapidly than usual, and rainfall in this month was only about three-fourths as large as usual.

7. In October, except at the commencement of the month and in East Bengal, rainfall was to a great extent absent.

8. In November good general, but in most cases rather light, rain fell over practically the whole province.

9. The following tables give briefly the amount and variation of the rainfall in each of the seven meteorological divisions of the province, month by month, for the monsoon season, May to October inclusive:—

Actual Rainfall.

Meteorological Divisions.	May.	June.	July.	August.	September.	October.	Year.
Orissa ...	3·60	2·65	10·18	20·70	9·80	1·47	47·90
South-West Bengal ...	3·33	5·76	15·71	20·05	6·98	1·49	53·32
East Bengal ..	8·38	9·70	19·60	21·02	8·55	4·75	72·00
North Bengal ...	8·40	12·22	14·03	12·22	7·40	0·77	55·04

Variation expressed in a percentage.

Orissa	— 9	— 70	— 19	+ 85	— 10	— 76	— 10
South-West Bengal ...	— 38	— 43	+ 31	+ 57	— 23	— 66	— 1
East Bengal ...	— 10	— 47	+ 20	+ 33	— 30	— 12	— 7
North Bengal ...	— 5	— 31	+ 0	— 14	— 46	— 83	— 25
North Behar ...	+ 3	— 40	+ 30	+ 18	— 35	—100	— 9
South Behar ...	— 41	— 61	+ 35	+ 75	— 19	— 84	+ 6
Chutia Nagpur ...	— 61	— 70	+ 28	+ 34	— 19	— 66	— 7

10. Finally, the rainfall of the whole province from May to October has averaged 52·22 inches, while the normal fall is 57·04 inches, or the actual fall has been 4·82 inches less than the normal. Expressed as a percentage, the actual rainfall in Bengal for this period has been nearly 9 per cent. in defect of the normal.

A. PEDLER,

Offg. Meteorological Reporter to the Govt. of Bengal.

METEOROLOGICAL OFFICE, BENGAL,

The 10th December 1888.

TABLE I.

Actual Monthly Rainfall of districts in Bengal for the months May to October 1888.

Meteorological Office, Bengal,
The 10th December 1888.

A. Pedler,
Offg. Meteorological Reporter to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 12th January 1889.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
		Western Districts.		
Burdwan Divn.	1	Burdwan Jan. 12 '89	Nil	Weather—cool and seasonable. *Rubbi* prospects continue good.
	2	Bankoora „ 12, '89	Nil	Weather—seasonable. *Rubbi* prospects continue fair in the Sudder, but not so favourable in the Bishenpore sub-division. Prices continue stationary at Sudder, but have slightly fallen at the Bishenpore mart.
	3	Birbhum „ 12 '89	Nil	Weather—cold. Threshing of *amun* paddy continues. Prospects of *rubbi* fair.
	4	Midnapur „ 12, '89	Nil	Weather—cold and dry. *Amun* harvesting completed. *Boro* being extensively cultivated. *Rubbi* crops doing well.
	5	Hugli „ 12 '89	Nil	Weather—seasonable. Condition and prospects of crops satisfactory.
		Howrah „ 14, '89	Nil	Weather—rather warm. South wind blowing. State and prospects of crops fair.
		Central Districts.		
Presidency Divn.	6	24-Perghs. Jan. 15, '89	Nil	Weather—hot for the season, with foggy mornings. Harvesting of *amun* paddy is practically over; outturn is expected to be from 8 to 11 annas. Prospects of other crops are fair. Sugar is being manufactured.
	7	Nuddea „ 12, '89	Nil	Weather—cool and seasonable. Prospects of *rubbi* crops good. Harvesting of *amun* paddy completed.
	8	Khoolna „ 12, '89	Nil	Weather—cool and clear. *Amun* is being reaped; outturn expected to be about 10 annas. Prospect of cold weather crop fair.
	9	Jessore „ 12, '89	Nil	Weather—cool with foggy mornings. *Amun* harvesting nearly completed. Other standing crops fair.
	10	Moorshedabad „ 12, '89	Nil	Weather—cold. Both *haimanti* rice and *kalai* are still being cut and threshed. *Rubbi* crops promising.
Rajshahye Divn.	11	Dinagepur „ 12, '89	Nil	Weather—seasonable. The rice harvest is nearly over, and yield has been better than was expected. The average outturn for the district will be over a ½ crop. *Rubbi* prospects fair.
	12	Rajshahye „ 12, '89	Nil	Weather—seasonable. Winter rice being harvested. Rain wanted for spring crops.
	13	Rungpur „ 12, '89	Nil	Weather—seasonable. Harvesting of *amun* is all but completed, with an average yield of 8 annas. Tobacco, pulse and wheat are doing well.
	14	Bogra „ 12, '89	Nil	Weather—seasonable; mornings foggy. The harvest of winter rice is still going on. Sugarcane and *rubbi* crops are growing. Potatoes are being sown. Rice is selling at 20 seers per rupee.
	15	Pubna „ 12, '89	Nil	Weather—fine. Outturn of *amun* only 8 annas on the average. Sugarcane moderate. *Rubbi* crops bad. Rain wanted.
	16	Darjeeling „ 12, '89	Nil	Weather—still unusually dry. Crops doing well.
	17	Julpigoree „ 12, '89	Nil	Weather—seasonable. Harvesting of *amun* nearly completed. Outturn is estimated at about 10 annas. Tobacco and other crops doing fairly well. Common rice selling at 18 seers per rupee.
		Eastern Districts.		
Dacca Divn.	18	Dacca Jan. 12, '89	Nil	Weather—very cold and fine. *Boro* paddy being planted. Pulses being gathered. Cutting of sugarcane continues. Prospects of winter crops good.
	19	Furreedpur „ 12, '89	Nil	Weather—seasonable and fine. No change of any sort to report. The *rubbi* prospects are good.
	20	Backergunge „ 11, '89	Nil	Weather—seasonable. Prospects of crops fair. Harvesting of *amun* still going on; outturn 12 annas.
	21	Mymensingh „ 11, '89	Nil	Weather—very cold for the last two or three days. Prospects of crops good.
Chittagong Divn.	22	Chittagong „ 15, '89	Nil	Weather—seasonable. *Amun* harvested; outturn moderate. Winter crops thriving. Prices steady.
	23	Noakholly „ 11, '89	Nil	Weather—seasonable. Reaping of *amun* completed. *Rubbi* crops getting on well.
	24	Tipperah „ 10, '89	Nil	Weather—dry and cold. Winter rice crop has yielded a very good outturn generally. *Rubbi* crops are coming on nicely.
	25	Chittagong Hill Tracts. „ 8, '89	Nil	Weather—very cold and foggy in the morning throughout the week. Mustard, tobacco, chillies, and other winter crops progressing. Prospects not good for want of rain.
		Hill Tipperah „ 9, '89	Nil	Weather—seasonably cold. Reaping of *amun* paddy finished. Prospects chillies, tobacco and mustard fair.

No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR				
Patna Divn.				
26	Patna	Jan. 12, '89	Nil	Weather—cold. Prospects of *rubbi* and poppy continue favourable. Prices stationary.
27	Gya	„ 12, '89	Nil	Weather—cold and seasonable. Paddy is being harvested and threshed. Prospects of *rubbi* and poppy promising.
28	Shahabad	„ 12, '89	Nil	Weather—rather warm. Paddy is being threshed. Prospects of *rubbi* crops fair, but rain wanted. Poppy doing well. Prices stationary.
29	Durbhunga	„ 12, '89	Nil	Weather—somewhat cloudy for the last two days. Rain much wanted especially in the north. *Rubbi* suffering in that part, but poppy and tobacco good. Prices slightly easier. Common rice selling at 15½ seers per rupee in Durbhunga.
30	Mozufferpur	„ 12, '89	Nil	Weather—cold and bright. Poppy doing well everywhere. Prospects of *rubbi* favourable in the Sudder and Hajeepur sub-divisions, and fair in South Sitamarhi, but unfavourable in North Sitamarhi. Rain would do good to all crops.
31	Sarun	„ 12, '89	Nil	Weather—occasionally cloudy, but no rain. Poppy and *rubbi* crops progressing satisfactorily and give excellent prospects. Lands are being prepared for indigo. Prices of food-grains falling.
32	Chumparun	„ 12, '89	Nil	Weather—too cold and fair. Prospects of both *rubbi* and poppy remain unchanged; a shower of rain will do immense good. *Arhar* doing well. Prices rising gradually, and affecting labouring classes in the distressed area.
Bhagulpore Divn.				
33	Monghyr	Jan. 12, '89	Nil	Weather—cold and seasonable. *Rubbi* crops doing well. *Kurthi* being harvested. Prices stationary.
34	Bhagulpur	„ 12, '89	Nil	Weather—seasonable. Outturn of late rice seems to be up to estimates already given. *Rubbi* doing fairly, but rain would now do good. *Cheena* being sown.
35	Purneah	„ 12, '89	Nil	Weather—fair and cold. *Rubbi* crops doing fairly well. *Aghani* outturn about an eight-anna crop.
36	Maldah	„ 12, '89	Nil	Weather—fair and cold Slight fogs. *Kalai* reaping continues with very good results. *Rubbi* crops thriving, but require rain.
37	Sonthal Perghs.	„ 12, '89	Nil	Weather—cold and clear. *Dhan* harvest nearly over. State of winter crops fair. Sugarcane is being cropped.
ORISSA				
Orissa Divn.				
38	Cuttack	Jan. 11, '89	Nil	Weather—seasonable. Reaping of *sarad* rice and *rubbi* in progress Price of rice stationary.
39	Pooree	„ 10, '89	Nil	Weather—dry and clear. Rain is wanted for *rubbi* crops. Harvesting of winter rice (late *sarad*) continues. *Dalua* crop doing well. Common rice 19 seers 7 chittacks per rupee in the Sudder sub-division and 20 seers 10 chittacks in the Khoorda sub-division.
40	Balasore	„ 11, '89	Nil	Weather—seasonable. *Sarad* rice is being threshed with an average outturn of nearly 10 annas. *Rubbi* crops yielding well.
CHOTA NAGPORE.				
South-West Frontier Agency.				
Chota Nagpore Divn.				
41	Hazaribagh	Jan. 11, '89	Nil	Weather—seasonable, but slightly cloudy to-day (11th). *Rubbi* beginning to suffer for want of rain. Poppy doing well; weeding and irrigation in progress. Grounds being prepared for sugarcane. Prices stationary.
42	Lohardugga	„ 12, '89	Nil	Weather—somewhat warm and cloudy. Rain urgently wanted for *rubbi* crops. Prices fluctuating. Coarse rice is rather dear in Palamow sub-division.
43	Singbhoom	„ 11, '89	Nil	Weather—seasonable. Prospects of *rubbi* crops have not improved. Prices almost the same as in last week.
44	Manbhoom	„ 12, '89	Nil	Weather—seasonable. Sugarcane pressing in progress; outturn varies from 14 annas in the south and west to 8 annas in the north. Prospects of *rubbi* moderate.

Published for general information.

The total fall from 1st to 12th January 1889	Nil
The average fall of the corresponding period for 24 years, S. G.'s Office ..	0·11

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

⌓ dew, ≡ fog.

* Means of six days.

Explanation.—Summary — The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years. The humidity of the atmosphere is expressed in percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number [illegible] determined from the returns sent in by the sub-divisional station for the period in question during the past 24 [illegible] are the numerical means of [illegible] in that district [illegible] stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

...for the week ending Friday, the 11th of January 1889.

Average humidity at 10 A.M.	Average cloud amount at 10 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. RAINFALL. Of week. Mean for district.	Of week. Normal mean.	Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 15th May 1888. Mean for district.	Since 15th May 1888. Normal mean.	Since 15th May 1888. Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—...... Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 15*th January* 1889.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 11TH OF JANUARY 1889.

DURING the week fine weather has again prevailed over the whole reporting area. The very high pressure over South Bengal, and the northern part of the Bay, which obtained during the early part of the week, was accompanied by light irregular breezes, and almost cloudless skies. These light winds had in Bengal and over the northern half of the Bay a westerly tendency, but further south, strong north-easterly winds have prevailed. From the middle of the week, the abnormally high pressure began to give way, and, with the exception of Thursday, the 10th, pressure continued to fall to the end of the week, the fall on the last day being rapid, and at some stations almost equalling a tenth of an inch. The temperature changed by small irregular amounts, humidity increased, and light variable winds became common in Bengal and over the Bay. Pressure was above the normal the first three days of the week, but during the latter half, the continued falls resulted in a defect. Temperature has been about normal, and humidity high. Slight clouds have been reported from some districts of Bengal, but generally fine cloudless weather has prevailed with light variable north-westerly winds, high pressure, and fairly steady temperature.

Pressure.—On Saturday, the first day of the week, a general small rise took place, and pressure was almost uniform over the province and the Bay. On Sunday a rapid rise began, the greatest changes being reported from the East Coast stations and those of North-East Bengal. The rise continued till Monday, the 7th, when abnormally high pressures were recorded in South-West Bengal and Orissa in some cases exceeding 30·2 inches. Gradients over the Bay became very steep. Afterwards the pressure began to fall, and this fall continued, with the exception of Thursday, the 10th, to the end of the week. The fall was most rapid at the head of the Bay. The total change during the week has been very small, and but for the difference of pressure in the Bay being not quite so large as they were, the pressure distribution at the end of this week is almost identical with that at the close of the preceding week.

The general average pressure for the week has been above the normal in all districts, the excess averaging 0·04 inch. The excess is, however, smallest in the north of the province as indicated by such stations as Purneah and Durbhunga, and in South-West Bengal as represented by Calcutta and Burdwan, while it is comparatively large in East and Central Bengal.

Temperature.—The changes of temperature have been small and irregular, and there has been no general variation from the mean, some stations reporting small excess, and the others a similar defect. At the beginning of the week a slight rise was reported from almost all stations. This rise continued in Bengal for the three first days of the week, but a fall, commencing in Burmah on Monday, became general, and slight falls were everywhere reported on Tuesday, the 8th. After that, though the changes were very irregular, slight falls were generally reported. On Friday, the 11th, a rise occurred over the whole of Bengal, but several Burmah stations and Chittagong reported a slight fall.

The mean temperature for the week for the whole province has been about one degree below the normal; but while defective temperatures have been recorded in the north and east of the province as indicated by such districts as North Behar, North Bengal, and East Bengal; on the other hand, South Behar and Chutia Nagpur have shown excess temperatures. The lowest temperature reported during the week is from Burdwan, where 44·0° was registered on the 7th. The minimum or night temperatures have indeed been distinctly low during the week. This is shown clearly in the following table, where the average maximum, minimum and mean temperatures for the week at nine typical stations in the province are compared with the normal values for the same period. At almost all these stations the minimum or night temperatures have been in defect of the normal, while the day temperatures have been in considerable excess.

Table showing the excess or defect of the actual mean temperature from the normal for the week ending the 11th of January 1889.

	Normal mean maximum temperature for the week ending 11th January.	Actual mean maximum temperature for the week ending 11th January 1889.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 11th January.	Actual mean minimum temperature for the week ending 11th January 1889.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 11th January.	Actual mean daily temperature for the week ending 11th January 1889.	Variation of actual mean from the normal.

Rainfall—Has been entirely absent from the province throughout the whole week, except for a few drops of rain which fell at Buxa in the Darjeeling Hills district on the 9th instant.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 11th of January 1889 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1888.

The total fall of rain from 6th to 12th January 1889	...		...	Nil (Inches.)

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h, and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA ;
The 14*th January* 1889.

A. PEDLER,
For Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

From the annexed table, exhibiting the mortuary statistics of the districts in Bengal for the month of October 1888, it appears—

1. That the deaths of 149,631 persons were registered out of a population of 66,055,695, presenting a death-rate of 27·12 per 1,000 per annum, against 22·20 per 1,000 during the preceding month, and 24·48 per 1,000 during the corresponding month of 1887, indicating, as compared with both the past periods, a considerable advance in the registration of deaths.

2. That the undermentioned districts returned the highest proportions of deaths :—

Districts.	Ratio per *mille.*	*Districts.*	Ratio per *mille.*
Shahabad	57·96	24-Pergunnahs	28·20
Gya	55·32	Murshedabad	28 20
Monghyr	40·56	Khulna	27 84
Maldah	40·08	Howrah	27 24
Hazaribagh	39·60	Purneah	26·88
Julpaiguri	38 52	Rajshahye	26 04
Lohardugga	37·92	Noakhali	25 56
Bhagulpore	34·68	Midnapore	25·44
Patna	33·60	Nuddea	25 32
Dinajpur	31·08	Backerganj	25·32
Darjiling	30·12	Serampore	25·20

3. That the diseases, as classified in the following table, furnish the death-rates exhibited below, in contrast with the results of the corresponding month of the preceding year :—

	Ratio per *mille* during— October 1888.	Ratio per *mille* during— October 1887.
Cholera	·84	·48
Small-pox	·02	·01
Fever	21·00	19·44
Bowel-complaints	·84	·72
Injury	·36	·36
Other causes	3·84	3·24

The above figures denote that there was an increase of mortality from all the death-causes (excepting injury), particularly from fever.

4. That cholera, fever, and the maladies classed under the head of "Other causes" were noticeably fatal in the following districts. The other diseases do not appear to have prevailed with more than ordinary severity anywhere :—

Cholera.	Ratio per *mille.*	*Fever.*	Ratio per *mille.*	*Other Causes.*	Ratio per *mille.*
Howrah	3·48	Shahabad	47·16	Puri	10·92
Maldah	3 48	Gya	46 68	Sarun	9·12
Shahabad	3 12	Julpaiguri	35·10		
Mozufferpore ..	3·00	Maldah	33 84		
24-Pergunnahs ..	2·64	Hazaribagh	33·60		
Bhagulpore ...	2 28	Monghyr	31·92		
		Dinajpur	29 64		
		Lohardugga	27·72		
		Bhagulpore	27·00		
		Murshedabad ...	24 96		
		Purneah	24 96		
		Rajshahye	23·88		
		Patna	23·64		
		Khulna	23·28		
		Jessore	22·32		
		Rungpore	22·08		
		Pubna	21·60		
		Nuddea	21·36		
		Bogra	21·00		
		Noakhali	21·00		
		Darjiling	20 88		

5. That the death-rates under the heads of *Sex*, *Class* and *Age*, stood as noted below :—

According to Sex.	Ratio per *mille.*	*According to Class.*	Ratio per *mille.*	*According to Age.*	Ratio per *mille.*
Males	28·56	Christians	21·60	Under 1 year ...	196·68
Females ...	25·68	Hindus	28 56	1 and under 5 years...	31 56
Ratio of male deaths to every 100 female deaths ...	109	Mahomedans ...	24·60	5 " " 10 " ...	15 00
		Budhists	15·00	10 " " 15 " ...	12·72
		Other classes ...	24·72	15 " " 20 " ...	16 56
				20 " " 30 " ...	16 32
				30 " " 40 " .	18·36
				40 " " 50 " ...	24·44
				50 " " 60 " ...	37 32
				60 years and upwards ...	67·20

W. H. Gregg, *Dip. Publ. Health, Camb.*,

OFFICE OF SANITARY COMMISSIONER FOR BENGAL,

The 11th January 1889.

W. H. GREGG, *Dip. Publ. Health, Camb.*,

Offg. Sanitary Commissioner for Bengal.

MEMORANDUM.

The principal municipalities in Bengal returned, during the week ending 22nd December 1888, the birth and death-rates of 27·6 and 31·1 per 1,000 of population, respectively, as opposed to 25·7 and 29·8 per 1,000, respectively, in the preceding week ending 15th December, indicating an improvement in the registration of both events.

2. These events were returned in the highest proportions from the following municipalities:—

Births.	Ratio per *mille.*	*Deaths.*	Ratio per *mille.*
Narainganj	49·7	Narainganj	86·9
Serampore	47·1	Suburbs of Calcutta	53·8
Comillah	46·2	Rampore Beauleah	49·9
Chupra	44·9	Serampore	49·1
Rampore Beauleah	44·6	Jessore	42·8
Durbhanga	42·5	Comillah	38·5
Monghyr	41·6	Purneah	38·1
Arrah	34·7	Utterpara	37·7
Dacca	33·1	Burdwan	36·6
Bhagulpore	32·6	Hughli	36·3
Howrah	31·5	Dacca	35·0
Purneah	31·2	Bali	31·6
		Puri	31·5

3. The subjoined table, taken from the general statement appended to this memorandum, indicates chiefly that, as compared with the results of the preceding week, cholera exhibited a decrease of mortality, while the number of deaths from bowel-complaints increased to a noticeable extent:—

	Ratio per *mille* during the weeks ending—	
	22nd December 1888.	15th December 1888.
Cholera	3·5	4·5
Small-pox	..	·2
Fever	12·4	11·6
Bowel-complaints	5·9	4·1
Injury	3	·2
Other causes	9·0	9·2

4. No death was reported from small-pox, and the casualties from injury were nowhere great. The other maladies enumerated above caused the greatest loss of life in the following municipalities:—

Cholera.	Ratio per *mille.*	*Fever.*	Ratio per *mille.*	*Bowel-complaints.*	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Narainganj ...	41·5	Purneah ...	31·1	Utterpara ...	28·3	Rampore Beauleah	23·6
Jessore ...	18·3	Comillah ...	26·9	Narainganj ...	16·5	Narainganj ...	16·5
Rampore Beauleah	10·5	Durbhanga ...	22·8	Burdwan ...	15·3	Serampore ...	15·7
Santipore ...	8·8			Suburbs of Calcutta ...	13·0	Bhagulpore ...	15·4
Howrah ...	8·0			Serampore ...	11·8	Puri ...	14·7
Suburbs of Calcutta	7·0					Dacca ...	14·3
Hughli ...	4·0					Bali ...	14·0
Dacca ...	3·2					Suburbs of Calcutta ...	13·9
						Midnapore ...	12·4
						Gya ...	10·9

5. With reference to *Sex*, *Class* and *Age*, the mortality of the week stood as follows:—

According to Sex.	Ratio per *mille.*	*According to Class.*	Ratio per *mille.*	*According to Age.*	Ratio per *mille.*
Males	32·9	Christians ...	34·8	Under 1 year ...	190·4
Females	29·0	Hindus ...	29·8	1 and under 5 years ...	43·1
Ratio of male deaths to every 100 female deaths	128	Mahomedans ...	34·1	5 „ 10 „ ...	14·7
		Other classes ...	36·4	10 „ 15 „ ...	9·5
				15 „ 20 „ ...	15·7
				20 „ 30 „ ...	19·8
				30 „ 40 „ ...	25·3
				40 „ 50 „ ...	27·6
				50 „ 60 „ ...	39·9
				60 years and upwards ...	83·8

W. H. Gregg, *Dip. Publ. Health, Camb.*,
Offg. Sanitary Commissioner for Bengal.

The 11*th January* 1889.

Statement showing the Results of the Registration of Births and Deaths in the Principal Municipalities in Bengal during the week ending 22nd December 1888.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*" the ratios under which have been omitted, inasmuch as the census of the European above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

OFFICE OF SANITARY COMMISSIONER FOR BENGAL;
The 11th January 1889.

W. H. GREGG, *Dip. Publ. Health, Camb.,*
Offg. Sanitary Commissioner for Bengal.

MEMORANDUM.

THE returns from the principal municipalities in Bengal for the week ending 29th December 1888 present the following results:—

1. Births and deaths were recorded in these municipalities at the rates, respectively, of 23·6 and 29·6 per 1,000 of population, as opposed to 27·6 and 31·1 per 1,000 in the preceding week ending 22nd December, indicating a falling off in the registration of both events.

2. The following municipalities returned the highest proportion of births and deaths:—

Births.

	Ratio per *mille.*
Narainganj	70 4
Utterpara	47 2
Monghyr	45·2
Durbhanga	40·1
Santipore	31 5
Chupra	31·2
Chittagong	30·6

Deaths.

	Ratio per *mille.*
Utterpara	56 6
Suburbs of Calcutta	54 8
Narainganj	53 8
Rampore Beauleah	44·7
Puri	44 1
Santipore	43·8
Serampore	41 2
Burdwan	36 6
Midnapore	32 5
Gya	32 1

3. In comparison with the preceding week, there was a decrease in the death rate from fever, small differences in the mortality from the other diseases, and no difference in the death-rate under the head "Other causes:—"

	Ratio per *mille* during the weeks ending—	
	29th Dec. 1888.	22nd Dec. 1888.
Cholera	3·7	3 5
Small-pox	·1	.
Fever	11·3	12 4
Bowel-complaints	5·0	5 0
Injury	·4	·3
Other causes	9 0	9·0

4. The municipalities named below appear to have suffered most from the diseases indicated in the foregoing table, excepting small-pox and injury, the deaths from which were nowhere above normal:—

Cholera.

	Ratio per *mille.*
Narainganj ...	20·7
Santipore .	14 0
Suburbs of Calcutta ...	10·1
Serampore . .	9·8
Howrah ...	7·4
Dacca ...	4·5

Fever.

	Ratio per *mille.*
Rampore Beauleah .	23·6
Burdwan	21·3
Santipore ...	21 0

Bowel-complaints.

	Ratio per *mille*
Utterpara ...	28·3
Serampore ...	13·7
Suburbs of Calcutta	13·2

Other causes

	Ratio per *mille*
Utterpara . .	28 3
Puri .	27 3
Midnapore ...	24 8
Chittagong ...	14·1
Suburbs of Calcutta ...	13·2
Narainganj	12 4
Serampore ...	11·8
Burdwan ...	10·7
Chupra ...	10·7

5. The mortality in relation to *Sex*, *Class* and *Age* stood as follows:—

According to Sex.

	Ratio per *mille.*
Males	30·6
Females	28·4
Ratio of male deaths to every 100 female deaths ...	121

According to Class.

	Ratio per *mille.*
Christians	39 1
Hindus	29 5
Mahomedans ...	29 7

According to Age.

	Ratio per *mille*
Under 1 year .	200 6
1 and under 5 years ...	27 [illegible]
5 " 10 " .	15 9
10 " 15 " ...	[illegible]
15 " 20 " ...	21 4
20 " 30 " ...	18 [illegible]
30 " 40 " ...	1[illegible] 6
40 " 50 " ...	2[illegible] 0
50 " 60 " ...	37 7
60 years and upwards ...	95 [illegible]

W. H. GREGG, *Dip. Pub. Health, Camb.*,
Offg. Sanitary Commissioner for Bengal.

The 14*th January* 1889.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending 29th December 1888.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

INCREASES.

	Tons
Coal	3,010
For Railway and Steamer purposes. Includes coal for Kidderpore docks.	
Cotton piece-goods	350
Poojah traffic.	
Grains (Rice)	4,896
From Kumar Khali and Goalundo principally, also from the Northern Section The Southern Section shews a falling off.	
Jute	35,227
A good outturn and advance in rates.	
Oil-seeds	1,245
Continued improvement in the London market.	
Railway plant, &c	523
For repairs and renewals.	
Salt	890
Increased despatches from Chitpore to Dacca and other hide-curing stations up country.	
Firewood	457
The Southern Section contributed this increase.	
Tobacco	372
From the Northern Section notwithstanding very serious decreases from Rungpore and Kaunia.	

DECREASES.

The decreases during the month are very insignificant, aggregating only 169 tons.

Calcutta, the 15th January 1889. F. P. QUINLAN, *Examiner of Accounts.*

Comparative Statement of the principal commodities carried over the Bengal Central Railway during the month of October 1888.

INCREASES.

	Tons.
Coal ...	617
For railway and Bengal Central Flotilla principally.	
Cotton piece-goods ...	139
Poojah traffic.	
Rice ...	110
Increase due to a favourable market in Calcutta.	
Jute ...	7,757
Every jute-despatching station on the Bengal Central Railway shows a substantial increase in despatches, notably K. L. with 1,29,313 maunds and Singhia with 17,709 maunds. It is said that insurances are being effected by a company in Calcutta on country-boat traffic.	
Oilseeds ...	105
Improvement in the London market.	
Railway plant, &c. ...	106
Due to transfer of Engineering workshop from Khulna to Bongong.	
Salt ...	102
Increased despatches from Chitpore succeeding the recent depression.	

DECREASES.

The decreases during the month were insignificant, aggregating only 63 tons.

CALCUTTA, *the 5th January* 1889.

WITHDRAWAL OF THE INLAND EMIGRATION ACT FROM THE DISTRICTS OF CHITTAGONG AND THE CHITTAGONG HILL TRACTS.

GENERAL DEPARTMENT INLAND EMIGRATION.

Calcutta, the 8th January 1889.

RESOLUTION.

READ—

The following correspondence on the subject of the proposed withdrawal of the districts of Chittagong and the Chittagong Hill Tracts from the operation of the Inland Emigration Act No. I of 1882:—

Letter from the Commissioner of the Chittagong Division, No. 767GM—IX-5, dated 13th August 1888.

Letter to the Superintendent and Remembrancer of Legal Affairs, No. 95T—G, dated 18th October 1888.

Letter from the Superintendent and Remembrancer of Legal Affairs, dated 31st October 1888.

Letter from the Superintendent and Remembrancer of Legal Affairs, No. 1098, dated 9th November 1888.

Letter to the Government of India, Revenue and Agricultural Department, No. 186, dated 3rd December 1888.

Letter from the Government of India, Revenue and Agricultural Department, No. 234—26-24E., dated 21st December 1888.

The special procedure provided by Act I of 1882 for enforcing labour contracts in certain specified areas is in force, as far as the Lower Provinces are concerned, only in the districts of Chittagong and the Chittagong Hill Tracts. The Commissioner of Chittagong has frequently urged their withdrawal as not required in his division; and in reviewing the departmental report for the year 1885, Sir Rivers Thompson so far accepted this view as to express a hope that the time was approaching when, considering the falling off in the number of labourers enrolled under the Act, it would be possible to adopt the course recommended. As the results of the following year showed a further decline, Sir Steuart Bayley called for a special report on the subject, which the Commissioner has since submitted. In this communication it is stated that such planters as had been consulted are unanimous in considering that the Act is not required, the ordinary law being sufficient to guard the interests both of employers and employed. This is the view of the District Officers also, and the Commissioner gives his own opinion as follows :—

"It is not adapted to a district where labour is as plentiful as it is here, and where there is, now at least, no objection to taking work on a garden. So far as I have seen, the Act here is entirely against the interests of the cooly and of the better class of planters, while it is favourable to the worst class of planters only. Happily this last class is so small that it may be said to be non-existent. I strongly recommend, therefore, that under the provisions of section 4, the Inland Emigration Act be withdrawn entirely from the districts of Chittagong and the Chittagong Hill Tracts."

2. In deciding whether the recommendation thus forcibly expressed by the local officers should be accepted, the Lieutenant-Governor has to give due weight to the consideration that the Government of India has repeatedly indicated for adoption the policy of dispensing with special legislation on the subject of labour contracts wherever it is possible to do so, leaving the matter to the operation of the ordinary law of the country. "Such legislation," the Secretary of State observed in a despatch No. 102, dated 4th November 1886, "should be considered as temporary only, and clearly ought not to be maintained longer than is absolutely necessary for the protection of both the classes concerned." Viewed from this standpoint, it seems clear that the retention of the system in the two districts referred to scarcely admits of defence. In the Hill Tracts the Act cannot be said to be necessary, as it is not now resorted to even in the case of a single labourer. In Chittagong the number of labourers placed under contract according to the provisions of the Act was never large, and has rapidly decreased in recent years: it was 915 in 1884 and had fallen to 433 in 1887, with the prospect of a further decrease in the immediate future. There is nothing in the condition of the tea industry in Chittagong to suggest that it should be placed under an exceptional system, different from that prevailing in the rest of the province, and particularly in the districts of Darjeeling and Julpigoree, which are now the chief seats of the cultivation of the tea plant. Chittagong is more densely populated than other tea districts in Bengal, local labour is more generally used, and the importation of coolies is resorted to only on a very minute scale. The maintenance of the statutory contract system cannot, therefore, be looked upon as really a necessity in that district, and there is even reason to believe that, so far as it has any effect at all, it is rather a hindrance than an aid to the progress of tea cultivation. It certainly has not effected the object which the late Commissioner of Chittagong had in view when recommending its introduction in the year 1877—that of modifying the system of task work in the interest of the labourer.

3. The Inland Emigration Act leaves to the Local Government, with the previous consent of the Government of India, the power of altering from time to time the area within which the law is in force. The Lieutenant-Governor considers that this power should now be exercised, and accordingly issues the appended notification with the approval of the Governor-General in Council. The Superintendent and Remembrancer of Legal Affairs to Government has advised that this measure will not affect existing contracts otherwise than by putting an end to the exceptional procedure by which they are at present enforced, leaving them in operation as ordinary engagements within the cognizance of the civil courts.

ORDER—Ordered that a copy of this Resolution and of the notification be forwarded to the Commissioner of the Chittagong Division, with reference to the correspondence ending with his letter No. $\frac{707G.M.}{IX-5}$, dated 13th August 1888, for information, and for favour of communication to the Inspectors of Labourers and Managers of tea-gardens.

Ordered also, that a copy of the Resolution and of the notification be forwarded to the Superintendent of Emigration, Calcutta, for information.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

Dated Calcutta, the 8th January 1889.

NOTIFICATION—By the Government of Bengal, General Department.

UNDER section 4 of the Inland Emigration Act I of 1882, the Lieutenant-Governor of Bengal, with the previous sanction of the Governor-General in Council, is pleased to declare that, on and from the 1st April 1889, the labour-districts of Chittagong and the Chittagong Hill Tracts shall cease to be subject to the provisions of the said Act by which they are declared to be labour-districts, and to all the provisions of the Act applicable only to labour-districts.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 19th January 1889.

Division	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.					
		Western Districts.			
BURDWAN DIVN.	1	Burdwan	Jan. 19, '89	Nil	Weather—rather warm for the season. Prospects of sugarcane, potato and *rubbi* crops generally good. Price of rice stationary.
		Raneegunge	...	0·18	
	2	Bankoora	" 19, '89	Nil	Weather—hot for the season. *Rubbi* coming up well. Mustard is being gathered. Prices continue stationary.
	3	Birbhum	" 19, '89	0·32	Weather—rather warm for the season. Prospects of *rubbi* crops good.
	4	Midnapur	" 19, '89	Nil	Weather—unseasonably warm. Rain wanted for *rubbi* crops.
	5	Hugli	" 19, '89	Nil	Weather—hot and cloudless. Crops doing well.
		Howrah	" 21, '89	Nil	Weather—a little cooler than last week. State and prospects of crops fair.
		Central Districts.			
PRESIDENCY DIVN.	6	24-Perghs.	Jan. 22, '89	Nil	Weather—warm and bright; latter part of the week rather cooler. Harvesting of *amun* all but over. Prospects of winter crops not good owing to want of rain. Manufacture of sugar progressing.
	7	Nuddea	" 19, '89	Nil	Weather—hot and close for the time of year. *Rubbi* crops as yet promising, but rain is urgently wanted in most parts of the district.
	8	Khoolna	" 19, '89	Nil	Weather—foggy and hot. *Amun* harvesting is nearly over; outturn expected to be 10 annas. Cold-weather crops fair.
	9	Jessore	" 19, '89	Nil	Weather—unseasonably warm. *Rubbi* crops doing well, but they want rain badly.
	10	Moorshedabad	" 19, '89	0·21	Weather—rather hot for the season. Both *haimanti* rice and *kalai* are still being harvested. *Rubbi* crops are promising.
		Lalbagh	..	0·08	
		Jangipur		0·82	
RAJSHAHYE DIVN.	11	Dinagepur	" 19, '89	0·06	Weather—getting warm. The average outturn of winter rice for the district is estimated at 9 annas. Sugarcane is being cut; outturn expected to be 14 annas. Prospect of *rubbi* fair. Coarse rice selling at 18 seers per rupee.
	12	Rajshahye	" 19, '89	0·38	Weather—warm. Rain has done much good. Price of rice has fallen. It is now 19½ pucka seers per rupee at the Sudder station. In Manda it sells at 18¼ seers per rupee.
		Nattore	...	1·03	
		Nowgong	...	0·41	
	13	Rungpur	" 19, '89	0·22	Weather—seasonable. Harvesting of *amun* completed with an average outturn of 8 annas. *Rubbi* crops coming up well. Prices of food-grains steady.
	14	Bogra	" 19, '89	0·38	Weather—calm and a little warm. Seven slight shocks of earthquake during the week. Reaping and storing of winter paddy continue. Sugarcane and *rubbi* crops growing well. Price of rice increasing slightly.
		Sherpore	..	0·61	
		Nowkhila		0·15	
	15	Pubna	" 19, '89	Nil	Weather—rather hot for the season. *Rubbi* crops suffering for want of rain. Sugarcane fair.
		Serajgunge	...	1·70	
	16	Darjeeling	" 19, '89	Nil	Weather—still unusually dry and clear. *Aghani dhan* has almost all been reaped in Silliguri sub-division. Crops generally doing well.
	17	Julpigoree	" 19, '89	Nil	Weather—cool and seasonable. Reaping of *haimanti* rice nearly over; average yield for the district will be about 10 annas. Standing crops doing well. Prices have slightly fallen. Common rice selling at 19 seers a rupee at the Sudder station.
		Eastern Districts.			
DACCA DIVN.	18	Dacca	Jan. 19, '89	Nil	Weather—cold and fine. Transplanting of *boro dhan* nearly completed. Cutting of sugarcane going on. Mustard and *kalai* being gathered. Prospects of winter crops good.
	19	Furreedpur	" 19, '89	Nil	Weather—hot. Prospects of crops continue good, but a little rain now would be beneficial.
	20	Backergunge	" 18, '89	Nil	Weather—hot for the time of the year. Propects of crops fair. Harvesting of *amun* crop is nearly finished; outturn reported to be 12 annas.
	21	Mymensingh	" 18, '89	0·11	Weather—cloudy in the beginning of the week; cool and fine in the latter part. Prospects of crops good.
		Jamalpur	..	0·15	
		Kishoregunge	...	0·65	
		Attia	...	0·72	
		Netrokona	...	Nil	
CHITTAGONG DIVN.	22	Chittagong	" 22, '89	Nil	Weather—seasonable. Prospects of winter crops good. Prices steady.
	23	Noakholly	" 18, '89	Nil	Weather—rather warm for the season. Harvesting of *amun* completed. *Rubbi* crops doing well. A little rain will do good to the crops.
	24	Tipperah	" 17, '89	Nil	Weather—warm for the season. Spring crops generally doing well. The shower in Brahmanberiah will aid them in that sub-division. Price of rice falling.
		Brahmanberiah	...	0·39	
	25	Chittagong Hill Tracts.	" 15, '89	Nil	Weather—very cold in the morning. Mustard, chillies, tobacco and other winter crops progressing. Mustard is in flower. Prospects not good for want of rain.
		Hill Tipperah	" 16, '89	0·42	Weather—rather warm. Sugarcane is being cut. Cotton, *til* and mustard are being gathered. Chillies and tobacco are doing well.

	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.				
PATNA DIVN.	26	Patna Jan. 19, '89	0·04	Weather—occasionally cloudy. Poppy doing well everywhere. Prospects of *rubbi* favourable. Prices almost stationary.
	27	Gya „ 19, '89	Nil	Weather—hot and cold. Paddy is being harvested and threshed. Prospects of *rubbi* and poppy promising. Prices almost stationary.
	28	Shahabad „ 19, '89	0·01	Weather—cool and bright with occasional clouds. Threshing of paddy and pressing of sugarcane going on. Prospects of *rubbi* and poppy continue favourable, but more rain wanted. Prices stationary.
	29	Durbhunga „ 19, '89 Tajpore ... Madhubani ...	0·02 0·25 0·30	Weather—occasionally cloudy. *Rubbi* prospects generally fair. Poppy and tobacco continue promising. A little injury is reported to have been done to *rahar* crop by hail in Tajpore sub-division. Common rice selling at 14 seers (pucka) per rupee in Durbhunga.
	30	Mozufferpur „ 19, '89 Sitamarhi ...	0·50 0·08	Weather—cold and cloudy. Poppy doing well everywhere. Prospects of *rubbi* favourable in Sudder and Hajipore sub-divisions, and fair in South Sitamarhi, but unfavourable in North Sitamarhi. The rainfall on the 13th instant has been beneficial to *rubbi* crops, but it was not general. Hail did some damage on same date.
	31	Sarun „ 19, '89 Sewan ..	0·10 0·48	Weather—cloudy. Slight rain on 13th, and a few showers this morning (19th). *Rubbi* and poppy much benefited by rain, but slightly damaged by hail in some places in the Sewan sub-division. Prospects, however, continue excellent.
	32	Chumparun „ 19, '89	Nil	Weather—cloudy off and on; unusually warm for this time of year. Prospects of standing *rubbi* and poppy crops fair, but rain is needed. Prices ruling very high as compared with the corresponding period of last year. Pressure in the affected tract increasing, but not acute.
BHAGULPORE DIVN.	33	Monghyr Jan. 19, '89 Begueerai ...	0·14 0·24	Weather—seasonable, cloudy at times. The hail which accompanied the rain on the 13th has done a little injury to the crops in flower; otherwise the rain has been beneficial to the young *rubbi* crops. Prices steady.
	34	Bhagulpur „ 19, '89	0·34	Weather—too warm for the season. The rain, though lighter in the north and south, has done good; but more is wanted for the cereals. It was heaviest in the chief *rubbi* tract. Prospects very fair. Mustard being gathered. Prices pretty steady.
	35	Purneah „ 19, '89	0·15	Weather—cloudy and chilly. *Rubbi* crops doing fairly well.
	36	Maldah „ 19, '89 Chanchal ... Shibgunge ... Gajole ...	0·48 0·13 0·07 0·09	Weather—cool and seasonable. The rain has done good to the *rubbi* crops, and prospects are now favourable.
	37	Sonthal Perghs. „ 19, '89 Jamtara ... Rajmahal ...	0·19 0·30 0·46	Weather—rather hot for the season. *Dhan* harvest is over. The little rain of this week did some good to the *rubbi* crops, which promise well.
ORISSA				
ORISSA DIVN.	38	Cuttack Jan. 18, '89	Nil	Weather—seasonable. Reaping of *sarad* rice in progress. Prices rising. Common rice sells at 18 seers 6 chittacks per rupee in town.
	39	Pooree „ 17, '89	Nil	Weather—seasonable. Threshing of winter rice going on. *Dalua* crop doing well. *Moong* is being sown. Common rice 20 seers 13 chittacks per rupee in the Sudder sub-division, and 19 seers 9 chittacks in the Khoorda sub-division.
	40	Balasore „ 18, '89	Nil	Weather—rather hot for this time of year. *Rubbi* crops being harvested. Prospects favourable. Price of rice ranges from 21 to 32 seers per rupee in the district.
CHOTA NAGPORE.				
South-West Frontier Agency.				
CHOTA NAGPORE DIVN.	41	Hazaribagh Jan. 18, '89	0·24	Weather—warm for the season Very slight rain on the 13th. It has not improved prospects of *rubbi* materially. Poppy doing well except in Bogodur, where it is suffering for want of proper irrigation Prices show a slight tendency to rise in the towns of Hazaribagh and Chutra.
	42	Lohardugga „ 19, '89	0·02	Weather—getting warm. Some slight rain during the week; more urgently wanted for *rubbi* crops. Prices almost steady.
	43	Singbhoom „ 18, '89	Nil	Weather—getting hotter every day. Sky was cloudy for a few days of the week. Paddy nearly harvested; outturn would be about 14 annas. Prospects of *rubbi* crops bad owing to want of rain. Sugarcane seems to be good, and outturn will be about 14 annas and in some places 16 annas. Outturn of *biri* crop will be about 10 to 12 annas, of mustard about 4 annas, and of gram about 6 or 7 annas. Prices same as in last week.
	44	Manbhoom „ 19, '89 Gobindpur ...	0·12 0·12	Weather—for the time being very hot. Sugarcane pressing is going on; outturn varies from 8 to 14 annas. *Rubbi* suffered greatly for want of rain; outturn as follows:—*Surso* (mustard) 7 annas, *surguja* 8 annas, gram 8 annas. Paddy harvest almost over; outturn about 12 annas.

Published for general information.

* Means of six days.
† Do. of five "

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years. The *humidity* of the atmosphere is expressed at percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past [illegible] stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

for the week ending Friday, the 18th of January 1889.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Rainfall. Of week. Mean for district.	Of week. Normal mean. * Mean of six days.

The variations are *negative* when the mean for the week is less than the correspon[illegible] [illegible] mean, and *positive* when greater. Denoting cloud amount rep[illegible]sents the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall the normal mean [illegible] years. The means of the distri[illegible] are the numerical average of the rainfall return received in the district, i.e., from total rainfall at the sub-divisional [illegible]

Statement of Rainfall in Bengal for the week ending Friday (6 p.m.), the 18th of January 1889.

Meteorological division.	District.	Station.	Rainfall. Saturday, 12th January 1889.	Sunday, 13th January.	Monday, 14th January.	Tuesday, 15th January.	Wednesday, 16th January.	Thursday, 17th January.	Friday, 18th January.	Total. Number of rainy days.	Total. Rainfall of week.	Total rainfall since 1st of month.	Average total rainfall from 1st of month.	Total rainfall since 15th May 1888.	Average rainfall from 15th May to date.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 22*nd January* 1889.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 18TH JANUARY 1889.

At the end of the previous week the barometer was falling at all stations. On the 12th a brisk fall of pressure occurred over the greater part of the province which resulted in the formation of a shallow but distinct low-pressure area over Central and West Bengal and over the greater part of Behar. In consequence of this depression moist southerly winds set in over the north of the Bay and the neighbouring districts, though northerly winds still continued to blow in the centre and south of the Bay. With the reversal of the winds in Bengal temperature increased very rapidly in the southern districts and became abnormally high, while at the same time humidity became very high, and in some cases the air was almost saturated with moisture. On the 13th pressure rose briskly in Bengal and the shallow depression filled up, but still southerly winds continued to blow at most of the stations near the sea coast. At this time also it would appear that the disturbed conditions which had been travelling south-eastwards along the line of the Himalayas existed over the hills to the north of Bengal, and there is little doubt that the southerly moist winds blowing from the head of the Bay went to feed this disturbance, for on the 13th fairly general rain was reported over almost the whole of Behar, and on the 14th the rainfall had extended over considerable parts of North Bengal and Chutia Nagpur and to a few districts in Central and East Bengal. The disturbance, however, rapidly passed away, and on the 15th practically no rain was reported from any station. The rainfall was decidedly heaviest in North Bengal, but falls exceeding an inch were only received at two or three stations. Notwithstanding the filling up of the depression and the disappearance of the disturbance, light and rather variable, but usually southerly winds still continued to blow at the head of the Bay for several days, and temperature in South Bengal continued to increase, while humidity remained very high, and these conditions remained almost unchanged over this district until the close of the week. Northerly winds were, however, commencing to blow from the middle of the week in North Bengal and North Behar, and were slowly driving back the moist southerly winds which prevailed in South Bengal; and thus while at the close of the week conditions over the north of the province were normal for the cold weather, very abnormal conditions as to temperature and humidity prevailed over the whole of South Bengal.

Pressure.—Pressure has been slightly in defect over almost the whole province, a few stations only in East Bengal and Chutia Nagpur reporting slight excess. On the 12th a very abnormal distribution occurred. There was a general fall, in some cases amounting to nearly a tenth of an inch, in South Bengal, and causing there a slight depression, which decidedly influenced the wind directions and weather during the whole of the week. On Sunday, the 13th, the depression began to fill up, though, owing to a slight fall on the following day, the normal distribution was not restored till about the middle of the week. Though pressure has been highest over Orissa, there has been a slight defect there. The largest defect is in South-West Bengal in the neighbourhood of Calcutta, where it amounts to about ·05 inch. The principal changes have thus been the general fall reported on Saturday, 12th, and, with some exceptions, a slight steady rise until the last day of the week, when there was again a general fall.

Temperature.—The main feature in the temperature changes during the week was the extraordinarily rapid rise which took place from the 11th to the 12th at the southern stations, and from the 12th to the 13th further inland. The rise was most rapid in South-West Bengal, where at several stations the minimum temperature increased 10° and upwards in the 24 hours. Temperature also continued generally to increase in all districts except the north of the province, and thus the average temperature for the week for the greater part of the province has been largely in excess. The excess in the mean temperature for the week in South-West Bengal has been nearly 7°, while in Chutia Nagpur it has been nearly 8°. Smaller excess temperatures have been registered in all other districts except North Behar, where a defect of 1·4° is registered.

The general range of temperature during the week and its large variation from that usually obtaining at this season is shown in the table below, where the average maximum, minimum and mean temperatures at nine typical stations in different districts of the province are given, compared with the normal values for the same period:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending the 18th of January 1889.

	Normal mean maximum temperature for the week ending 18th January.	Actual mean maximum temperature for the week ending 18th January 1889.	Variation of actual mean from the normal. Darjeeling	44·4	48·6	+4·2	35·8	36·5	+0·9	40·0	42·6	+2

Rainfall.—The average rainfall in North Bengal during the week has equalled nearly three-tenths of an inch, while in East Bengal, Behar, and Chutia Nagpur it has averaged from one to two-tenths. In South-West Bengal the average fall has been smaller than this, while Orissa has been rainless. Taking up the rainfall district by district, the following districts have received an average fall from half to one inch:—Pubna and Rajshahye; the following falls averaging from a quarter to half an inch:—Beerbhoom, Moorshedabad, Mymensing, Bogra and Maldah; and the following falls from a tenth to a quarter of an inch:—Comillah, Dinagepore, Rungpore, Mozufferpore, Sarun, Bhagulpore, Sonthal Pergunnahs, Lohardugga, and Manbhoom.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 18th of January 1889:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1888.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, ≡ fog, ⌓ dew.

A. PEDLER,
For Offg. Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;
Calcutta, the 21st January 1889.

MEMORANDUM.

From the annexed table exhibiting the vital statistics of the principal municipalities in Bengal for the week ending 5th January 1889, it appears—

1. That during the week in question births and deaths were registered in the proportions, respectively, of 25·4 and 28·9 per 1,000 of population, as opposed to 23·6 and 29·6 per 1,000, respectively, during the preceding week ending 29th December 1888, indicating an improvement in the registration of births.

2. That births and deaths were recorded at the highest rates from the following municipalities:—

Births.

	Ratio per mille.
Utterpara	56·6
Monghyr	41·6
Howrah	37·8
Puri	37·8
Naraingani	37·3
Chupra	36·1
Rampore Beauleah	34·2
Darjiling	32·6
Durbhanga	32·3
Bhagulpore	30·8
Gya	30·1
Ranaghat	29·9

Deaths.

	Ratio per mille.
Suburbs of Calcutta	59·6
Serampore	45·1
Utterpara	37·7
Naraingani	37·3
Puri	35·7
Rampore Beauleah	34·2
Burdwan	33·6
Darjiling	32·6
Howrah	29·2

3. That the only noticeable point, in connection with the incidence of the specific death-causes in comparison with the outcome of the preceding week, is a sensible abatement in the mortality from cholera, *vide* subjoined table:—

	Ratio per mille during the weeks ending— 5th January 1889	29th December 1888.
Cholera	2·7	3·7
Small-pox	·2	·1
Fever	11·3	11·3
Bowel-complaints	5·3	5·0
Injury	·5	·4
Other causes	8·9	9·0

4. That no municipalities suffered much from small-pox, or presented a large number of casualties from injury. The following municipalities returned high death-rates from the other diseases specified in the foregoing table:—

Cholera.

	Ratio per mille.
Naraingani	16·6
Suburbs of Calcutta	7·7
Mozufferpore	4·9
Howrah	4·0

Fever.

	Ratio per mille.
Rampore Beauleah	26·3
Suburbs of Calcutta	22·1

Bowel-complaints.

	Ratio per mille.
Serampore	13·7
Suburbs of Calcutta	13·0

Other causes.

	Ratio per mille.
Puri	25·2
Suburbs of Calcutta	15·7
Midnapore	15·5
Serampore	13·7
Howrah	10·9
Gya	10·9

5. That under the heads of *Sex, Class* and *Age*, the mortality stood as follows:—

According to Sex.

	Ratio per mille.
Males	32·4
Females	25·0
Ratio of male deaths to every 100 female deaths	146

According to Class.

	Ratio per mille.
Christians	30·4
Hindus	29·3
Mahomedans	28·4

According to Age.

	Ratio per mille.
Under 1 year	197·2
1 and under 5 years	30·8
5 " 10 "	9·9
10 " 15 "	9·5
15 " 20 "	15·7
20 " 30 "	18·4
30 " 40 "	21·0
40 " 50 "	24·3
50 " 60 "	39·3
60 years and upwards	93·7

W. H. Gregg, *Dip. Publ. Health, Camb.*,
Offg. Sanitary Commissioner for Bengal.

The 21*st January* 1889.

Statement showing the Results of the Registration of Births and Deaths in the Principal Municipalities in Bengal during the week ending 5th January 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

ROAD CESS.

No. 438R.C.

Dated Calcutta, the 24th January 1889.

READ—

Letter from the Accountant-General, Bengal, No. 613L.F., dated 18th January 1889, submitting an abstract of the receipts and expenditure of the several District Road Committees in Bengal for the quarter ending 30th September 1888.

RESOLUTION.—The Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees for the second quarter of the year 1888-89 be published in the *Calcutta Gazette* and circulated to the officers concerned.

ORDER.—Ordered that a copy of this Resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette*.

Ordered also that a copy of this Resolution, and of the abstract referred to, be forwarded to the Commissioners of the Rajshahye, Bhagulpore, Chittagong and Chota Nagpore Divisions; to the Superintending Engineers of the Eastern and Western Circles; and to the Financial Department of this Government, for information.

By order of the Lieutenant-Governor of Bengal.

W. B. BESTIC,

E. T. ATKINSON,

Accountant-General, Bengal.

SANITARY CONTROL OF EMIGRANTS TO THE LABOUR DISTRICTS OF ASSAM.

GENERAL DEPARTMENT—INLAND EMIGRATION.

Calcutta, the 28th January 1889.

RESOLUTION.

READ—

The undermentioned letters and previous correspondence regarding the outbreak of cholera amongst emigrants from Bengal to Assam.

From the Superintendent of Emigration—

(1) No. 1036, dated the 1st September, 1888.
(2) No. 1037, dated the 3rd September, 1888.

From the Sanitary Commissioner for Bengal—

(1) No. 6676, dated the 26th October, 1888.
(2) No. 8569, dated the 22nd December, 1888.

The Lieutenant-Governor has had under consideration the circumstances connected with the outbreaks of cholera among emigrants on their way from Bengal to the labour districts of Assam, and the means best calculated to check such epidemics. The present law (Act I of 1882) recognises two distinct systems of emigration; labourers executing engagements under the first are kept under strict sanitary supervision from the date of recruitment to that of their arrival in Assam, every detail as to their lodging in depôts, their journey, their food, and their clothing being regulated on an elaborate plan, while those who adopt the second system, known as that of free emigration, do not execute any formal engagements until they reach Assam, and are on that account, as ordinary travellers, exempted from any special sanitary supervision while passing through Bengal. The latter constitute the great majority, and it has been ascertained that they are conveyed in large bodies, and detained for a considerable period in depôts, so that their position, so far as the necessity for sanitary control is concerned, does not differ from that of labourers engaged under the Act. The depôts now used for their reception at Raneegunge were recently inspected at the instance of the Indian Tea Association by the Superintendent of Emigration, who reported that he had found the sanitary arrangements to be very defective, the water-supply to be drawn in many cases from more or less unclean tanks, the cooking of the food to be imperfectly attended to, and the total absence of special hospital accommodation for the treatment of coolies attacked with cholera or other contagious diseases, and of satisfactory arrangements for the disposal of the dead or of their belongings. It seems to the Lieutenant-Governor to be most necessary that these depôts or rest-houses should be brought under sanitary supervision; and the question whether the law should not be amended with this object has been submitted for the consideration of the Government of India. In the meantime it seems desirable to take such temporary measures as are within the power of Government for the prevention of the more flagrant sanitary abuses, without having recourse to the suspension of emigration, which had to be enforced in 1886 in certain districts.

2. A cholera shed and place of inspection for coolies going to Assam, with the necessary establishment required for the proper treatment and care of the sick, was last year established at Kurigram, and the agency sanctioned for medical inspection at Mugra was at the same time transferred to Naihatti, emigrants having ceased to break the journey at the former place. Arrangements were also made for the proper treatment of emigrants during the transit by rail, and for reporting by telegram to the Emigration authorities at Dhubri all cases of cholera occurring along the line of railway and at Goalundo. The Commissioners of the Chota Nagpore and Burdwan Divisions were further instructed, pending the contemplated amendment of the law, to take such executive measures as they could adopt with the co-operation of municipalities to mitigate the sanitary abuses brought to light by the inspection of the depôts in both divisions by the Sanitary Commissioner for Bengal. These orders are now repeated; and, in addition, the Lieutenant-Governor desires

that the Sanitary Commissioner or the Superintendent of Emigration, as they may agree between themselves, in conjunction with a Magistrate to be deputed for the purpose by the District Magistrate, should inspect the private depôts at Raneegunge, and indicate to the owners any sanitary improvements which the inspection may show to be urgently necessary. It is hoped that such requisitions will be obeyed, but if they are not, it will probably be necessary to take further steps under the municipal law, or by stopping emigration from infected areas. The depôts at Calcutta should be similarly inspected, in communication with the Commissioner of Police. The Municipality will be requested to ensure the due disposal at Raneegunge of the bodies of coolies dying at the depôts: cremation need not be insisted on, but all interments should be duly performed. The Superintendent of Inland Emigration will also be instructed to open a temporary cholera hospital at Raneegunge for infected coolies on a plan which he has prepared. In the event of an outbreak of cholera a medical officer will be deputed to the Sealdah station, and another to the Raneegunge station, to examine emigrants, and, in communication with the Railway authorities, to prevent those infected from starting. The depôt from which an infected coolie comes should be ascertained in each case with a view to the adoption of precautionary measures.

The increased expenditure involved in these arrangements should be borne by the Inland Labour Transport Fund.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

DONATION MADE BY MAHARANI SURNOMOYEE, C.I.E., OF CASSIMBAZAR FOR THE RELIEF OF DISTRESS IN ORISSA.

THE following correspondence is published for general information.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secy. to the Govt. of Bengal.

REVENUE DEPARTMENT;
CALCUTTA,
The 29th January, 1889.

No. 28R, dated Cuttack, the 7th January, 1889.

From—C. F. WORSLEY, ESQ., Commissioner of the Orissa Division,
To—The Secretary to the Government of Bengal, Revenue Department.

IN forwarding copy of the correspondence noted in the margin, relative to a donation of Rs. 1,000 presented by Maharani Surnomoyee, Member of the Imperial Order of the Crown of India, for the relief of distress in Orissa, I have the honour to suggest that the thanks of Government may be given to the Maharani for her benevolent act, and that my retention of the money in deposit against future contingencies may be approved.

Margin: The Maharani's letter, No. 301, dated 9th November, 1888. This office letter, No. 2114, dated 7th December, 1888. The Maharani's letter, No 336, dated 13th December, 1888.

No. 301, dated Cassimbazar Rajbaree, the 9th November, 1888.

From—MAHARANI SURNOMOYEE, Member of the Imperial Order of the Crown of India, Cassimbazar.
To—The Commissioner of the Orissa Division.

I AM grieved to learn that scarcity is on its utmost height in the province of Orissa, and that actual distress has already prevailed in some parts of the country. I feel it, under the circumstances, a duty incumbent on me to come forward at this critical moment with my humble aid on behalf of the suffering people, and beg to enclose a donation of Rs. 1,000* (one thousand rupees) towards their relief.

An acknowledgment is solicited.

* Half Government Currency Note R/95 68113 for Rs 1,000

No. 2114R, dated Cuttack, the 7th December, 1888.

From—C. F. WORSLEY, ESQ., Commissioner of the Orissa Division,
To—MAHARANI SURNOMOYEE, Member of the Imperial Order of the Crown of India, Cassimbazar.

WITH reference to your No. 309 of the 26th November, 1888, I have the honour to acknowledge receipt of the right half of the currency note for rupees one thousand, and to thank you for your liberal donation for the relief of distress in Orissa.

2. I am happy to inform you that at the present time, owing to the late seasonable rains and the improved prospects of the crops, there is no necessity for the administration of relief in any district of this division. With your approval I propose to keep the money in deposit for some months, and should it not be required, as I trust it will not, for charitable relief during the next hot season, I will again communicate with you as to its disposal. Though happily your anticipation of continued distress has not as yet been realized, I none the less warmly appreciate your kind motives and solicitude for the people of Orissa.

No. 336, dated Cassimbazar Rajbaree, the 13th December, 1888.

From—MAHARANI SURNOMOYEE, Member of the Imperial Order of the Crown of India, Cassimbazar,
To—The Commissioner of the Orissa Division.

I HAVE the honour to acknowledge the receipt of your letter, No. 2114R, dated the 7th instant, and in reply beg to state that I feel a pleasure which I know no words to express at the happy turn the events have taken of late I am really glad of the agreeable disappointment of my hopes of affording relief in distress which is no longer apprehended. If, however, on some future occasion, my humble help goes to meet even in the slightest measure the wants of the suffering humanity or to promote the cause of any public interest, I shall consider myself amply repaid. I respectfully leave to you the disposal of the amount of my donation. I shall only be happy to hear how it is appropriated when occasion occurs.

No. 351—23Fam., dated Calcutta, the 28th January 1889.

From—H. W. C. CARNDUFF, ESQ., Under-Secretary to the Government of Bengal, Revenue Department,
To—The Commissioner of the Orissa Division.

I AM directed to acknowledge the receipt of your letter No. 28R, dated the 7th instant, and annexures, regarding a donation of Rs. 1,000 made by Maharani Surnomoyee, C.I.E., of Cassimbazar, for the relief of distress in Orissa.

2. In reply, I am to say that the Lieutenant-Governor approves your proposal that the sum referred to should be kept in deposit for the present against future contingencies, and I am at the same time to request that the Lieutenant-Governor's thanks may be conveyed to the Maharani for her benevolence.

PROJECTED TRAMWAY FROM JULPIGOREE TO THE WESTERN DOOARS.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

Communications.

No. 309C, dated Calcutta, the 29th January 1889.

READ—

Letter No. 2D.T.R., dated the 31st August 1888, from the Inspector of Local Works in the Rajshahye Division, submitting the Dooars Tramway project.

Letter No. 257, dated the 20th September 1888, from the Inspector of Local Works, submitting the statements referred to in the report on the project.

Read again—

Letter dated the 19th September 1887, from Messrs. Finlay, Muir and Company and others, urging the necessity for the construction of a tramway between the tea-gardens in the Dooars and the Northern Bengal State Railway.

Letter No. 2015C., dated the 21st February 1887, to the Inspector of Local Works in the Rajshahye Division, communicating orders for making a survey for the line of tramway proposed, and preparing an estimate of the cost of constructing the tramway.

Letter No 2149C., dated the 13th December 1887, to Messrs. Finlay, Muir and Company and others, informing them of the steps that have been taken to have a project prepared for the tramway.

RESOLUTION.—The question of improving the means of communication between the Dooars tea districts and Julpigoree has been brought several times to the notice of the Government of Bengal. In September 1887, Messrs. Finlay, Muir and Company and others again urged upon the Government the pressing necessity for connecting the tea-gardens in the Dooars with the Northern Bengal State Railway, and asked for a guarantee of four per cent. for a fixed period to enable them to raise the capital required. The Lieutenant-Governor then determined to have the surveys for the line carried out by the Public Works Department and expressed his willingness to give, free of charge, the land, and at a nominal rate such timber as might be available from the adjoining Government forests; also favourable rates for the carriage of the tramway material over State Railways: and His Honour further stated that when the result of the survey was received he would consider any fresh proposals that might be made, and see if terms could be arrived at for a work which would be of great utility to the tea districts.

2. In November 1887, the Government of Bengal ordered the commencement of the surveys and the preparation of the necessary plans and estimates of the cost of constructing the tramway.

3. Two proposals had been submitted for connecting the tea-gardens with the railway. The first, and that which had received the most support, was for a tramway starting from the bank of the river Teesta opposite Julpigoree and running north through the country to the west of the Durlah river to a point above its junction with the Chel and below its junction with the Mal and the Neora. Crossing the Durlah in this locality, the line would run along the general alignment of the Mal road to near the Mal post-office, thence running west *viâ* the Bullabaree bungalow to the Chel. To serve the Nagracotta gardens there would be a branch leaving this line at a point below the crossing of the Durlah and running in an easterly direction to the point where the Nagracotta road crosses the Juldaka river. The length of the main line would be 35 miles and that of the branch about 6 miles.

The second proposal was for a line joining the Northern Bengal State Railway at Silliguri. This line would run in a north-easterly direction to a point on the Teesta below its junction with the Gheesh, where there would be a steam ferry. From this point the line would trend towards the north, running between the Gheesh and the Chel rivers to some point on the latter at which it could be bridged. It would then run in an easterly direction as far as the Mal river, beyond which it was understood it could not be carried except at great cost.

4. The survey for the line was begun in December 1887, and, after some correspondence as to the proper route to be adopted, was completed in August

1888. The plans and estimates of the cost of constructing the tramway have now been completed, and the whole project is sufficiently matured for the consideration of any definite proposals that may be made.

5. The project as it now stands is for a tramway from a point opposite Julpigoree on the east side of the Teesta river to Mal, a mart in the centre of the Western Dooars, with branches to Dam-Dim and Ramsahai, the whole being 40 miles in length. The reasons for placing the line as laid down are given in detail in the report on the estimate which accompanies this Resolution. The line will provide access to most of the tea-gardens, and it is capable of being extended to the Chalsa gardens hereafter.

6. The total cost of the tramway was estimated by the Inspector of Local Works who had charge of the surveys at Rs. 12,56,682. The estimate has been revised and corrected in this office, and now stands at Rs. 11,26,017, as shown in the accompanying note (Appendix F). The estimate as it now stands is believed to be a reliable one, but the Government can undertake no responsibility for its accuracy.

7. The estimate of the traffic can at best be only approximate, and the Government of Bengal cannot be responsible for its correctness. Returns of traffic will be found appended to this Resolution, and it is for those who propose to take up the scheme to estimate what portion of this traffic would be carried on the tramway, and what receipts would be derived from it.

8. It is now left to those interested to submit proposals framed in accordance with the "Bengal Tramways Act, 1883," for the construction of this tramway. The demands on the District Fund are such as to preclude the District Board from giving any guarantee for the payment of interest on the capital required for the undertaking, and the concessions which the Government is prepared to make must be considered as limited to those specified in the first paragraph of this Resolution.

ORDER.—Ordered that this Resolution be published in the Supplement to the *Calcutta Gazette* for general information.

By order of the Lieutenant-Governor of Bengal,

E. J. MARTIN,

Offg. Secy. to the Govt. of Bengal,
P. W. Dept.

FINANCIAL DEPT.,
The 29th January 1889.

H. J. S. COTTON,
Offg. Secy. to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 26th January 1889.

Division	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.					
		Western Districts.			
BURDWAN DIVN.	1	Burdwan	Jan. 26, '89	Nil	Weather—cool. Spring prospects fair. Prices stationary.
	2	Bankoora	„ 26, '89	Nil	Weather—seasonable. No change in prospects of standing crops. Mustard and sugarcane are being cut. Prices continue stationary.
	3	Birbhum	„ 26, '89	0·05	Weather—seasonable. Paddy is being threshed out. *Rubbi* crops promising.
	4	Midnapur	„ 26, '89	Nil	Weather—rather warm for the time of year. The *rubbi* will be poor for want of rain. *Boro* is still being transplanted in parts.
	5	Hugli	„ 26, '89	Nil	Weather—fair. *Rubbi* crops promising.
		Howrah	„ 28, '89	Nil	Weather—seasonable. State and prospects of crops fair, but a little rain is wanted.
		Central Districts.			
PRESIDENCY DIVN.	6	24-Perghs.	Jan. 29, '89	Nil	Weather—cloudy and foggy. Harvesting of *amun* nearly over. Winter crops suffering from want of rain. Manufacture of sugar continues.
	7	Nuddea	„ 26, '89	Slight rain.	Weather—cool and seasonable; slight rain on 24th. *Rubbi* crops promising, except in Kushtea and in parts of the Meherpore sub-division. Rain urgently wanted.
	8	Khoolna	„ 26, '89	0·07	Weather—cool and clear. Cold-weather crops fair. *Amun* harvest nearly over with 10 annas outturn.
	9	Jessore	„ 26, '89	Nil	Weather—pretty cool towards the latter part of the week. *Amun* harvesting over. Rain wanted for the *rubbi* crops, the prospects of which are fair.
	10	Moorshedabad	„ 26, '89	0·10	Weather—a portion of the week was cloudy and hot for the season; cold from the 25th. *Haimanti* harvesting almost completed. *Kalai* being cut and gathered still. *Rubbi* promising.
RAJSHAHYE DIVN.	11	Dinagepur	„ 26, '89	Nil	Weather—seasonable. Harvesting of *haimanti* paddy almost over. Sugarcane is still being cut. Prospects of *rubbi* fair. Coarse rice selling at 18 seers per rupee.
	12	Rajshahye Nattore	„ 26, '89 ...	0·13 0·20	Weather—seasonable. *Amun* harvest nearly over. Recent rain will be beneficial to standing crops. Prospects of spring crops generally fair.
	13	Rungpur	„ 26, '89	0·04	Weather—cloudy and cool. The standing crops are doing well, but some rain is urgently needed. Land is being prepared for *aus* paddy and jute.
	14	Bogra Sherpore Nowkhila	„ 26, '89 ... 	0·06 0·05 0·10	Weather—seasonable; slight showers fell on 24th. Harvest of winter rice over. Spring crops growing fairly, but more rain needed. Sugarcane is being cut. Common rice selling at 20 seers per rupee.
	15	Pubna Serajgunge	„ 26, '89 ..	Nil 0·09	Weather—fine. *Rubbi* crops are becoming worse for want of rain.
	16	Darjeeling	„ 25, '89	0·51	Weather—cold and cloudy. More rain wanted. Crops doing fairly well.
	17	Julpigoree	„ 26, '89	0·46	Weather—cool, occasionally cloudy. Harvesting of *haimanti* rice completed except in a few places. Rain, which fell on the 24th, will do much good. Prices stationary.
		Eastern Districts.			
DACCA DIVN.	18	Dacca	Jan. 26, '89	Nil	Weather—fine and cold. Pulses and mustard are being gathered. Cutting of sugarcane continues. Prospects of winter crops good.
	19	Furreedpur	„ 26, '89	Nil	Weather—warm; another threat of rain has passed off without any rain. State and prospects of crops good. Rain would benefit them, and the absence of it is certainly disappointing. But in this district rain is less needed than in most other districts, for the land lies low, and the rivers are numerous, and the soil is never dry, and for the cold-weather crops the absence of rain is not of much importance.
	20	Backergunge	„ 25, '89	Nil	Weather—seasonable. Prospects of crops fair. Harvesting of *amun* crop is still going on; outturn 12 annas.
	21	Mymensingh	„ 25, '89	Slight rain.	Weather—cool with foggy mornings. Slight rain on the 24th at the Sudder sub-division. Prospects of crops good. Mustard is being harvested.
CHITTAGONG DIVN.	22	Chittagong	„ 29, '89	Nil	Weather—seasonable. Winter crops thriving, but rain wanted. Prices steady.
	23	Noakholly	„ 25, '89	Nil	Weather—seasonable. Mornings sometimes foggy. *Rubbi* crops going on well. Rain wanted.
	24	Tipperah	„ 25, '89	Nil	Weather—seasonable and dry. Cold-weather crops are everywhere reported good, and their area is normal. Prices easy.
	25	Chittagong Hill Tracts.	„ 22, '89	Nil	Weather—mornings and nights foggy and cold, but at noon very sultry throughout the week. Mustard, chillies and other winter crops progressing. Mustard is forming into seeds in some places. Prospects not good for want of rain.
		Hill Tipperah	„ 24, '89	Nil	Weather—gloomy. Sugarcane still being cut. Prospects of chillies and tobacco fair.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.			
Patna Divn.			
26	Patna Jan. 26, '89 Behar ...	Nil 0·07	Weather—cold and cloudy. Prospects of standing *rubbi* and poppy crops favourable. Early mustard is being harvested in the Barh sub-division. *Boro* rice is being transplanted. Prices stationary.
27	Gya „ 26, '89	0·05	Weather—cold. Harvesting of paddy is being finished. Prospects of *rubbi* and poppy are promising.
28	Shahabad „ 26, '89 Buxar ... Sasseram .	0·11 0·45 0·20	Weather—cloudy and foggy. Showers have done some good to the *rubbi* crops, the prospects of which are on the whole fair. The outturn of the *aghani* crop is better than was formerly estimated, and probably does not fall short of ten annas. Prices stationary.
29	Durbhunga „ 27, '89 Madhubani ..	0·21 0·14	Weather—bleak and cloudy at times, but on the whole hot and bright. Tobacco and poppy promise well and *rahar* very fair. *Rubbi* has been benefitted in Madhubani by the rain. Food-grains slightly falling in prices. Common rice ranging from 18 to 19 seers per rupee throughout the district.
30	Mozufferpur „ 26, '89 Hajipur ... Sitamarhi ..	0·15 0·16 0·15	Weather—cloudy during the greater part of the week and temperature low The slight rain has been beneficial to the *rubbi* crops in the Sudder and Hajipur sub-divisions and in the southern part of Sitamarhi, and some good has also been done to the scanty crops in North Sitamarhi. Poppy is prospering satisfactorily.
31	Sarun „ 26, '89 Gopalgunge	0·36 0·53	Weather—cloudy throughout the week, with occasional rain and heavy morning fogs. Rain has been very beneficial to the young *rubbi* crops, of which the prospects are very favourable. Poppy is also doing well everywhere. Lands are being prepared for indigo. Prices stationary
32	Chumparun „ 26, '89	0·23	Weather—foggy, cloudy and fair alternately. Very cold since 25th. Prospects of standing *rubbi* and poppy crops improved to an appreciable extent by a shower of rain on the 24th. Prices show no tendency to fall, and pressure continues in the area affected by failure of the winter rice crop.
Bhagulpore Divn.			
33	Monghyr Jan. 26, '89	0 02	Weather—cold and occasionally cloudy. *Rubbi* crops doing well. Prices have risen slightly.
34	Bhagulpur „ 26, '89 Banka ...	Nil 0 13	Weather—seasonable; cloudy with slight drizzle on 24th. Mustard is being harvested. Planting of sugarcane is in progress. Lands are being ploughed in places. Prospects of *rubbi* crops favourable. Prices fairly stationary.
35	Purneah „ 26, '89	Nil	Weather—cold and foggy at night and in the morning. Paddy has been harvested with deficient outturn. *Rubbi* crops doing well, but rain is badly wanted.
36	Maldah „ 26, '89 Shibgunge ...	0 05 0·10	Weather—fair, occasionally cloudy. *Rubbi* crops are in good condition.
37	Sonthal Perghs. „ 26, '89 Godda ... Rajmahal ...	0·11 0·20 0·12	Weather—seasonable. Prospects of *rubbi* crops continue favourable. The rain of this week will do great good to the standing crops.
ORISSA.			
Orissa Divn.			
38	Cuttack Jan. 25, '89	Nil	Weather—fair and seasonable. *Sarad* rice is being threshed. Common rice sells at 18 seers 6 chittacks per rupee in town.
39	Pooree „ 24, '89	Nil	Weather—seasonable. Rain is wanted for *rubbi* crops. Winter rice is being threshed. *Dalua* crop doing well. Common rice 19 seers 11 chittacks per rupee in the Sudder sub-division and 17 seers 12 chittacks per rupee in the Khoorda sub-division.
40	Balasore „ 25, '89	Nil	Weather—seasonable *Rubbi* is being harvested. Prospects of *dalua* rice in the Bhudruck sub-division are good.
CHOTA NAGPORE.			
South-West Frontier Agency.			
Chota Nagpore Divn.			
41	Hazaribagh Jan. 25, '89	Nil	Weather—cold and seasonable. Rain, if it fall even now, will do good to *rubbi*; estimated outturn between 8 and 10 annas. Poppy doing well. Mustard being gathered; outturn about 9 annas. Sugarcane pressing continues, yield may be estimated at about 10 annas. Prices stationary, but high for the season.
42	Lohardugga „ 26, '89	0 05	Weather—cool. Slight rain with high winds on the 24th. Weather is now cool and bright. Prospect of *rubbi* not good. Prices steady.
43	Singbhoom „ 25, '89	Nil	Weather—seasonable, sky somewhat cloudy. Prospect of *rubbi* crops has not improved. Prices nearly the same as in last week.
44	Manbhoom „ 26, '89	Nil	Weather—seasonable with occasional clouds. Sugarcane pressing nearly over, outturn 8 to 12 annas. *Rubbi* crops coming up fairly.

* Means of six days.
† Do. of five „

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years. The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 21 stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

for the week ending Friday, the 25th of January 1889.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Rainfall. Of week. Mean for district.	Of week. Normal mean.	Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 15th May 1888. Mean for district.	Since 15th May 1888. Normal mean.	Since 15th May 1888. Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the 29th January* 1889.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 25TH JANUARY 1889.

THE meteorological conditions in Bengal at the end of the previous week were very abnormal from the fact that temperature was excessive, while humidity was also high, and the most important weather changes during the present week have been—first, the reduction of temperature in Bengal, in some districts of which an excess of 7° continued during the two first days of the week; second, the decrease of humidity reported on Sunday, the 20th, especially in South Bengal with the renewal of northerly winds; and third, the changes consequent on the extension towards the end of the week to Behar, South Bengal, and Orissa, of two disturbances which had formed in Central and Northern India.

On Saturday, the 19th, a few showers fell in Behar, but the skies were everywhere rapidly clearing, and fine weather became general over the whole of the province. Temperature was still abnormally high, and southerly winds recommenced at the head of the Bay, in consequence of the low-pressure area which prevailed over North Bengal. This low-pressure area filled up, however, on the following day, and northerly winds returned over South Bengal and the Bay, and these caused a large reduction of humidity, though the temperature still remained rather high, specially in the southern districts. The excess temperature was generally largest during the day, and when the high temperature began to give way, the change was greatest in the night temperatures. On the 21st pressure increased rapidly in South Bengal and Orissa, and was accompanied by a large reduction of temperature, the fall amounting in some cases to almost 10°. From the 21st to the 24th fine weather prevailed in all districts, until the fall of the barometer and increase of humidity in Orissa and Behar were caused by the eastward movement of the disturbances in Central and Northern India. During these days the pressure and temperature were falling in South-West Bengal and Orissa, giving a slightly defective temperature in the western parts of these districts. On the 24th pressure continued falling in Orissa, due to the easterly movement of the depression which had formed in Central India but rose elsewhere, and a low-pressure area became distinctly marked over Orissa and part of South-West Bengal. This affected the weather in Bengal on Thursday, giving cloudy weather and slight showers. The disturbance rapidly passed away, and had almost ceased to exist on Friday, the 25th. The few showers and humid cloudy weather which obtained in Behar on Thursday were caused by the eastward passage of the second depression which had formed in Northern India, but its influence also rapidly disappeared, and with the rising pressure on Thursday fine weather was quickly restored, and ordinary north-east monsoon conditions obtained generally at the end of the week.

Pressure.—Pressure was almost normal at the beginning of the week, and for the first two days only small irregular changes took place, without sensibly altering the variation from the normal at the different stations. On Monday, the 21st, a general, and in some districts a rapid, rise occurred, giving everywhere an excess. The rise was most rapid in Behar, North Bengal and Assam, the greatest change of over one-tenth of an inch being at Purneah. This was partly removed on the following day, when there was a general fall, largest in Behar, where it averaged about ·05." On Wednesday the fall continued with great rapidity in Orissa and the western districts of the Province, in connection with the low-pressure areas which had formed in Central India and the Punjab, both of which moved eastward On Thursday the low pressure over Orissa and the north-west corner of the Bay intensified, and was made more decided by a rise elsewhere, especially towards the east. The depression rapidly filled up, a general rise being reported on Friday, especially in Orissa and South-West Bengal. The important changes during the week were therefore the rise on Monday, the fall on Tuesday and Wednesday, and the filling up of the Orissa low-pressure area. The changes were otherwise irregular, and the normal pressure conditions with which the week opened were almost restored at the close, though the average pressure for the week was slightly higher than the normal.

Temperature.—Notwithstanding the rapid fall of temperature which took place in the early part of the week, the average mean temperature for the Province has been about 3° above the normal, the excess being strongly marked in Orissa and Chutia Nagpur, where it has equalled from 4° to 5°

The general range and distribution of temperature for the week and its variation from the normal is shown in the following table, where the average maximum, minimum and mean temperatures at nine typical stations in the Province are compared with the normal

values for the same period. In both day and night readings it will be seen that temperature has been considerably in excess :—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending the 25th of January 1889.

	Normal mean maximum temperature for the week ending 25th January.	Actual mean maximum temperature for the week ending 25th January 1889.	Variation of actual mean from the normal. Rainfall —The average rainfall in North Bengal, Behar, and Chutia Nagpur for the week has been between a tenth and a fifth of an inch ; elsewhere it has been practically rainless. The largest falls have actually occurred in the Sarun, Darjeeling, Jupigooree, Cooch Behar, and Shahabad districts ; but even here the falls have averaged considerably less than half an inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 25th of January 1889 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE						RAINFALL

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, ≡ fog, ⩍ dew.

A. Pedler,
For Offg. Meteorological Reporter to the Govt. of India.

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h, and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
The 28th January 1889.

A. PEDLER,
For Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

THE mortuary statistics of the districts in Bengal for the month of November 1888 present the following results:—

1. The deaths of 140,186 persons were registered among a population of 66,055,695, representing an annual death-rate of 25·44 per 1,000, against 27·12 per 1,000 in the preceding month, and 26·76 per 1,000 in the corresponding month of 1887, indicating, as compared with both the past periods, a large decrease in mortality.

2. The following districts returned the highest proportions of deaths:—

Districts.	Ratio per mille.	*Districts.*	Ratio per mille.
Maldah	70·32	Rungpore	31·56
Shahabad	39·48	Hazaribagh	30·36
Julpaiguri	35·64	Serampore	29·76
Murshedabad	33·48	Noakhali	29 04
Gya	33·48	Nuddea	28 92
Purneah	33·36	Darjiling	28·32
Jessore	33 24	Backerganj	27·96
Dinajpur	33 12	Hughli	27 84
Khulna	32 76	Pubna	27 84
24-Pergunnahs	32 52	Rajshahye	26 64
Monghyr	32·04	Tipperah	26 52
Bhagulpore	32·04	Bogra	25 44

3. The mortality from the principal diseases under record stood, during the month under review, contrasted with similar information for the corresponding month of the preceding year, as follows:—

	Ratio per mille during— November 1888.	
	November 1888.	November 1887.
Cholera	1·32	·48
Small-pox	·03	·02
Fever	19 56	21·48
Bowel-complaints	·60	·72
Injury	·01	·12
Other causes	3·48	3 60

The only noticeable fact disclosed by the above comparison is that the death-rate from fever was considerably lower in November 1888 than in November 1887.

4. The undermentioned districts suffered pre-eminently from cholera, fever and the maladies classed under the head of "Other causes." The other diseases (indicated in the above table) exhibit no noticeable fluctuation:—

Cholera.

	Ratio per mille.
Maldah	27·48
Monghyr	9 84
Suburbs of Calcutta	5·88
Serampore	4 56
Murshedabad	3 96
Jessore	3·84
Howrah	3·12
Nuddea	3·12
Hughli	2 52

Fever.

	Ratio per mille.
Maldah	41 04
Shahabad	33 24
Julpaiguri	32 76
Dinajpur	31·08
Purneah	30·48
Rungpore	29 52
Gya	29 28
Jessore	27·36
Murshedabad	27 00
Hazaribagh	26 64
Khulna	26 04
Bhagulpore	26 04
Monghyr	25 44
Noakhali	24 12
Pubna	23 88
Rajshahye	22 80
Nuddea	22 56
Darjiling	21 62
Bogra	20 28
24-Pergunnahs	20·16

Other causes.

	Ratio per mille.
Puri	10 56
Backerganj	9 36
Tipperah	8·16

5. In relation to *Sex, Class* and *Age*, the death-rates during the month under notice stood as follows:—

According to Sex.

	Ratio per mille.
Males	27·00
Females	23·88
Ratio of male deaths to every 100 female deaths	111

According to Class.

	Ratio per mille.
Christians	15·48
Hindus	24·84
Mahomedans	27·12
Buddhists	15 84
Other classes	18·60

According to Age.

	Ratio per mille.
Under 1 year	172·32
1 and under 5 years	28 68
5 " 10 "	14 40
10 " 15 "	11 88
15 " 20 "	15 96
20 " 30 "	15·96
30 " 40 "	17·52
40 " 50 "	23·88
50 " 60 "	35·04
60 years and upwards	64·68

W. H. GREGG, *Dip. Publ. Health, Camb.*,
Offg. Sanitary Commissioner for Bengal.

The 25*th January* 1889.

OFFICE OF SANITARY COMMISSIONER FOR BENGAL,

The 25th January 1889.

W. H. GREGG, *Dip. Publ. Health, Camb.*,

Offg. Sanitary Commissioner for Bengal.

MEMORANDUM.

The table annexed to this memorandum shows—

1. That during the week ending 12th January 1889, births and deaths were registered in the principal Municipalities in Bengal at the rates respectively of 25 9 and 26·6 per 1,000 of population, against 25·4 and 28·9 per 1,000, respectively, during the preceding week ending 5th January, indicating a falling off in the registration of deaths.

2. That the following Municipalities furnished the highest proportions of births and deaths:—

Births.

	Ratio per mille.
Bali	52 6
Naraingunj	49·7
Bhagulpore	38·0
Monghyr	36·2
Comillah	34·6
Purneah	34·6
Rampore Beauleah	34·2
Serampore	33·4
Howrah	33·2
Gya	30·7

Deaths.

	Ratio per mille.
Serampore	56·9
Suburbs of Calcutta	45·9
Burdwan	42·7
Bali	35·1
Howrah	34·4
Puri	31·5

3. That as compared with the results of the preceding week, there was a sensible diminution of mortality from fever and bowel-complaints, but no important differences in the death-rates from the other diseases, *vide* figures given below:—

	Ratio per mille during the weeks ending— 12th Jan. 1889.	5th Jan. 1889.
Cholera	2 8	2·7
Small-pox	·1	·2
Fever	10·2	11·3
Bowel-complaints	4 3	5·3
Injury	·6	·5
Other causes	8·6	8 9

4. That the mortality from small-pox and injury was nowhere high, and that the other diseases mentioned above caused the highest mortality in the following Municipalities:—

Cholera.

	Ratio per mille.
Serampore ...	11 8
Howrah ...	8·6
Suburbs of Calcutta ...	6·8
Dacca ...	3 2

Fever.

	Ratio per mille.
Burdwan ...	24·4
Rampore Beauleah ...	21·0

Bowel-complaints.

	Ratio per mille.
Serampore ...	11·8
Suburbs of Calcutta ...	11·0

Other causes.

	Ratio per mille.
Puri ...	21·0
Serampore ...	17·7
Monghyr ...	12·7
Midnapore ...	12·4
Burdwan ...	12·2
Suburbs of Calcutta ...	12·2
Bhagulpore ...	10 0

5 That the mortality of the week distributed under the heads of *Sex*, *Class* and *Age* stood as follows:—

According to Sex.

	Ratio per mille.
Males	27 2
Females	26·0
Ratio of male deaths to every 100 female deaths	118

According to Class.

	Ratio per mille.
Christians	39·1
Hindus	27·0
Mahomedans ...	25·6

According to Age.

	Ratio per mille.
Under 1 year ...	193·8
1 and under 5 years ...	24·2
5 „ 10 „ ...	8·3
10 „ 15 „ ...	9·0
15 „ 20 „ ...	14·1
20 „ 30 „ ...	19·2
30 „ 40 „ ...	21·0
40 „ 50 „ ...	24·0
50 „ 60 „ ...	38·8
60 years and upwards ...	69·8

W. H. Gregg, *Dip. Publ. Health, Camb.*,
Offg. Sanitary Commissioner for Bengal.

The 25th January 1889.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending 12th January 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated from the revised population under all heads in the above table except "Age," the ratios under which have been omitted, inasmuch as the census of ... [illegible] ... as a basis of calculation owing to the results of the census made ... not having been recorded under the authorized form of age classification.

CONTENTS.

No. 18Mne., dated Calcutta, the 30th January 1889.

THE following report of the seventh quarterly inspection of the Dock Works at Kidderpore, which are being carried out by the Commissioners for making improvements in the Port of Calcutta, is published for general information.

By order of the Lieutenant-Governor of Bengal,

W. B. BESTIC,

Under-Secy. to the Govt. of Bengal, P. W. Dept.

QUARTERLY INSPECTION OF THE KIDDERPORE DOCK WORKS.

Dated Calcutta, the 28th January 1889.

From—MESSRS. H. CLOETE AND W. CONNAN,

To—The Secretary to the Government of Bengal, P. W. Dept.

WE have the honour to report that, in accordance with the instructions contained in the Government of Bengal's letter No. 103M., dated the 12th instant, we made the seventh quarterly inspection of the works at the Kidderpore docks, as shown in the progress report submitted by the Superintending Engineer of the docks on the 10th instant.

2. The index plan with tabular statement showing work done during the quarter under report, and the total quantity of work executed from the commencement of the docks, which have been prepared by the Superintending Engineer in charge of the works, are with Government.

PERMANENT WORKS.

Sixty-feet Lock.—About 3½ lakhs of excavation were taken out, and over 1½ lakhs masonry and 2,500 square feet of foundation were done during the quarter. The two end and centre sections of the lock have been built up to coping level. The founding of the intervening sections was well in hand on our inspection, and arrangements were being made for the erection of the gates.

Eighty-feet Entrance.—Over 6½ lakhs of excavation were taken out, and 56,300 cubic feet of masonry and 5,440 square feet of foundation were done during the quarter. The foundation of this work is now well in hand.

Tidal Basin.—Over 6¼ lakhs of excavation were taken out. Work on the quay walls was stopped, pending further progress on the eighty-feet and double entrances.

Graving Dock.—This work is now well in hand, and good progress may be expected. During the quarter over 9 lakhs of excavation were removed, and nearly 1½ lakhs of masonry and 7,840 square feet of foundation were done.

Double Entrance.—Over 5¼ lakhs of excavation were taken out, and nearly 3 lakhs of masonry and 17,280 square feet of foundation were done. This work is now in good progress.

Dock No. 1.—Up to date about 75 per cent. of the total quay wall masonry has been completed, and about half the total excavation taken out. During the quarter 251 running feet foundation and 240,346 cubic feet masonry were done and 34 lakhs of excavation removed.

Boat Canal.—The piers and abutments for the road bridges were commenced, and good progress was made with them, and excavation for the foundations for the lift lock and syphon culvert was commenced.

Expenditure.—The total expenditure up to end of the quarter was reported to be Rs. 1,19,51.253, of which Rs. 93,83,903 were spent on account of works and Rs. 25,67,350 for land.

SANITARY.

The average number of work-people employed was 8,974, among whom there were 85 deaths (56 of these being from cholera), showing a death-rate of 35 82 per thousand per annum.

GENERAL REMARKS.

We are of opinion that fair progress has been made with the works, and that, so far as we have been able to judge from our inspection, the character of the work is satisfactory.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 2nd February 1889

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
		BENGAL.		
		Western Districts.		
Burdwan Divn.	1	Burdwan Feb. 2, '89	0·36	Weather—cool and seasonable. Standing crops doing well. Prospects fair.
		Culna ...	0·73	
		Cutwa ...	0 60	
		Raneegunge ...	1·25	
	2	Bankoora " 2, '89	0·55	Weather—cold and cloudy. The rainfall on the night of Wednesday (30th January) has been much beneficial to the *rubbi* plants. Prices continue stationary.
	3	Birbhum " 2, '89	0·75	Weather—seasonable. *Rubbi* prospects good. Sugarcane pressing has begun.
		Rampur Hât ..	2·02	
	4	Midnapur " 2, '89	1 67	A storm of rain on the night of 28th January. The wind is now from the north, and the weather is cooler. The rain will do some good to the *boro* crop. Harvesting of *rubbi* going on.
	5	Hugli " 2, '89	0·18	Weather—warm for the time of year. *Rubbi* crops doing well.
		Serampur ..	0 15	
		Jehanabad ...	0 68	
		Howrah " 4, '89	0·15	Weather has become co'der again. *Amun* reaped. Rain expected to do good to *boro* paddy.
		Ooloberiah ...	0·42	
		Central Districts.		
	6	24-Perghs. Feb. 5, '89	0·72	Weather—variable. Prospects of standing crops have somewhat improved since the recent rain Pressing of sugarcane continues.
Presidency Divn.	7	Nuddea " 2, '89	1·07	Weather—cool and cloudy with good rain on 30th. *Rubbi* crops on the whole very fair and reported to have greatly benefited by the rain.
		Kooshtea ...	0 57	
		Meherpur ..	2 1›	
		Chooadanga ...	0·94	
		Ranaghat ...	1 72	
	8	Khoolna " 2, '89	0·26	Weather—cloudy and warmer during the early part of the week, since then cooler. *Amun* crop harvested. Cold weather crops doing well.
	9	Jessore " 2, '89	0 59	Weather—seasonable and occasionally cloudy The recent rainfall has been beneficial to the spring crops. Prospects of winter crops fair.
		Jhenidah	0 65	
		Magoora ..	0 65	
		Narail ..	0 73	
		Bongong ..	0 ‹5	
	10	Moorshedabad " 2, '89	1 04	Weather—a shower of rain with hail-stones on the night of the 29th January. The following day was rainy and cloudy. Cold and damp from the 31st *Haimanti* harvesting is almost completed; outturn estimated to be 12·6 annas on the average. Prospects of *rubbi* good, but the hail-stones will injure linseed and gram to some extent.
		Lalbagh ...	1·80	
		Kandi ..	0·58	
		Jangipur ..	2 15	
Rajshahye Divn.	11	Dinagepur " 2, '89	2·36	Weather—cold and cloudy. The rain will facilitate the preparation of lands for *bhadoi* and jute Prospects of *rubbi* reported fair. Price of rice stationary.
		Thakurgaon ...	2 47	
	12	Rajshahye " 2, '89	1 27	Weather—very cold. A severe hail storm in the Nowgong sub-division has done damage to houses and crops, especially to ganja crop. Rain has improved the prospects of the *rubbi* crops Price of rice varies from 15 to 22½ seers per rupee.
		Nattore ...	1·47	
		Nowgong ..	2·30	
	13	Rungpur " 2, '89	2 49	Weather—fine and bright, but unusually cold. The *rubbi* crops are doing well. The heavy rainfall of the 30th and 31st January has been of immense benefit. Ploughings are now in active progress for the rice and jute crops.
		Gaibanda .	1·16	
		Nilphamari ...	0 40	
	14	Bogra " 2, '89	1·76	Heavy rain on 30th and 31st January. Weather now cold and fine, with high winds. Rice harvest finished. The rain has done much good to the *rubbi* crops. Sugarcane is being cut. Price of rice stationary.
		Sherpore ...	0 70	
		Nowkhila ...	1·19	
	15	Pubna " 2, '89	0·53	Weather—cloudy. *Rubbi* crops are likely to thrive from the little shower of rain. More rain is wanted.
		Serajgunge ...	0·33	
	16	Darjeeling " 2, '89	2 34	Weather—wet, foggy and cold. The rain during the week has materially benefited the crops.
	17	Julpigoree " 2, '89	2 00	Weather—cloudy and foggy with rain on the 30th and 31st January. Sugarcane pressing has commenced in places. Potatoes are being gathered. Yield may be estimated at 10 annas. Tobacco crop is said to have been injured in places by hail-stones. Prices stationary.
		Eastern Districts.		
Dacca Divn.	18	Dacca Feb 2, '89	1 21	Weather—cold and mostly fine. Mustard and pulses are being gathered. Cutting of sugarcane continues. Transplanting of *boro* paddy nearly completed. Recent rain has done much good to the standing crops.
		Manickgunge ...	0 45	
		Munshigunge ...	0 45	
		Naraingunge ...	0 29	
	19	Furreedpur " 2, '89	0·86	The recent rain has done all that could possibly be desired. The prospects of the *rubbi* crops are now excellent.
		Madaripur ...	0·40	
	20	Backergunge Jan 31, '89	0·60	Weather—hot for the time of the year. Prospects of crops fair. Harvesting of *amun* crop is still going on in some places. Outturn reported to be 12 annas.
	21	Mymensingh Feb. 1, '89	0 35	Weather—chilly, rainy and cloudy. State and prospects of crops good. The recent rain has done good to the standing crops and will facilitate the work of ploughing.
		Netrokona .	0 13	
Chittagong Divn.	22	Chittagong " 5, '89	0·59	Weather—seasonable. Winter crops progressing but rain wanted. Prices rising
	23	Noakholly " 1, '89	Nil	Weather—cloudy and rather warm for the [illegible] State of the *rubbi* crops continues to be good.
	24	Tipperah Jan. 31, '89	Nil	Weather—hot and cloudy. Winter crops doing well. Rice is selling at from Rs 2-6 to Rs. 2-8 per maund in the Sudder station. Rain is much wanted.
	25	Chittagong Hill Tracts. " 29, '89	Nil	Weather—very cold. Foggy up to 9 A. M. in the morning. Tobacco and chillies progressing. Mustard is in flower and is forming seed.
		Hill Tipperah " 31, '89	Nil	Weather—cloudy and windy. Chillies and tobacco promising. No other important crops now in the fields.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.			
PATNA DIVN.			
26	Patna Feb. 2, '89	1·76	Weather—clear and cold. Prospects of *rubbi* and poppy continue favourable Prices stationary.
	Dinapur .	1·23	
	Behar ...	1·82	
	Barh ...	2·14	
27	Gya „ 2, '89	0·67	Weather—seasonable but stormy Harvesting of paddy almost completed. The rain of the week has benefited the *rubbi* crops of late sowings, but has damaged those in flower. Hail-stones have done injury to the poppy as well as to the *rubbi* crops.
28	Shahabad „ 2, '89	1·12	Weather—stormy with showers Prospects of *rubbi* crops improved by rain, though some further damage caused by hail-storm. Prices stationary. Poppy crop promising.
	Buxar ..	0·91	
	Sasseram .	0·39	
	Bhabuah ...	0·03	
29	Durbhunga „ 2, '89	3·00	Greater part of the week cloudy. Heavy rain on 30th and 31st The rainfall of the week will do incalculable good to the *rubbi* crops. The people have set to work to sow *cheena*, *dhan* and *mung*. The rain has, however, done some injury to the *rahar* and tobacco crops. Prices of common rice range between 14 and 19 seers per rupee
	Tajpur ..	1·88	
	Madhubani ...	1·30	
30	Mozuffurpur „ 2, '89	2·79	Weather—cloudy, wet and cold. The heavy rain has been most beneficial. Some, but not serious, damage has been done to *rahar*, tobacco and *rubbi* crops in flower. In North Sitamurhi prospects have materially improved. The backward *rubbi* has been saved, and *cheena* and *mung* will now be sown. The land will be in excellent condition throughout the district for indigo sowing.
	Hajipur ...	1·76	
	Sitamarhi ...	3·75	
31	Sarun „ 2, '89	1·63	Heavy rain throughout the district with hail in places on the 29th and 30th. Weather fine and cold since with strong west wind *Rubbi* excellent. Some slight damage to peas and linseed. Poppy in Sewan a good deal damaged by hail
	Sewan	1·49	
	Gopalgunge .	2·76	
32	Chumparun „ 2, '89	2·61	Weather—fair and chilly. The rainfall of the week has considerably benefited the standing crops, though slight damage is apprehended to wheat and barley where the fall has been excessive. Slight damage is also reported to young poppy by hail in places. Prospects, on the whole, much improved.
BHAGULPORE DIVN.			
33	Monghyr Feb. 2, '89	2·14	Weather—bleak and cloudy throughout the week with occasional fogs at night and morning Rain has been beneficial to the young *rubbi* crops, but somewhat injurious to all other standing crops which are in flower.
	Begoserai ...	2·14	
	Jamooe ...	2·21	
34	Bhagulpur „ 2, '89	1·61	Weather—cloudy with rain and thunder-storms for two days, since then bright and cold. The rain has on the whole greatly benefited the *rubbi* crops, but the hail in places has damaged those approaching maturity. In the north the *rubbi* is poor in the tract where the *bhadoi* and *aghani* failed, and mustard and wheat there will probably yield a six-anna outturn only, but prospects along the Kusi are better Ploughing in progress
	Soopool (up to 30th January 1889)	1·23	
	Madhepurah (up to 31st January 1889).	3·96	
35	Purneah Feb. 2, '89	2·43	Weather—dry, cold and seasonable. The late rain has done much good to the standing crops which are now coming on nicely
	Kishengunge ..	1·98	
	Araria ...	2·19	
36	Maldah „ 2, '89	3·29	Weather—fair in the early part of the week; then cloudy and rainy. Heavy rain with hailstones on Wednesday night (30th) Hail has destroyed 8 annas of the *rubbi* crops in thana English Bazar and outpost Manickchuk, and also to some extent in thana Maldah. In other places rain has done much good.
	Shibgunge ...	2·52	
	Gajole ..	2·50	
37	Sonthal Perghs „ 26, '89	1·72	Weather—cold Heavy rain and hail have done some injury to the standing crops. Rain has, however, benefited the sugarcane and late wheat and barley crops.
	Deoghur ...	1·41	
	Godda ...	3·45	
	Jamtara ...	0·72	
	Pakur ...	2·82	
	Rajmahal ...	1·76	
ORISSA.			
ORISSA DIVN.			
38	Cuttack Feb. 1, '89	Nil	Weather—fair and seasonable. *Sarad* rice being threshed. *Rubbi* crops being gathered. Price of rice stationary.
39	Pooree Jan. 31, '89	Nil	Southerly high winds towards the close of the week. Threshing of winter rice (late *sarad*) going on. *Dalua* rice doing well. *Rubbi* crops promising Rain wanted for ploughing. Common rice 17 seers 1 chittack per rupee in the Sudder sub-division and 17 seers 6 chittacks in the Khoorda sub-division.
40	Balasore Feb. 1, '89	Nil	Weather—variable. Hardly any crops on ground, except some *dalua* rice in the Bhudruck sub-division.
	Bhudruck ...	½ inch.	
CHOTA NAGPORE.			
South-West Frontier Agency.			
CHOTA NAGPORE DIVN.			
41	Hazaribagh Feb 1, '89	0·36	Weather—cloudy in the early part of the week; bright since. The little rain of the 29th has slightly improved the prospects of the standing *rubbi* and poppy crops, and will facilitate ploughing for early paddy. Prices again show a slight tendency to rise.
42	Lohardugga „ 3, '89	Nil	Weather—changeable in the beginning of the week; now bright and cold. Rain in Palamow has benefited the *rubbi* crops to some extent. More rain wanted. Prices as before.
	Palamow ...	0·35	
43	Singbhoom „ 1, '89	0·21	Weather—cloudy and rather hot for some days during the week. Rain has fallen in various parts of the district Prospect of *rubbi* crops has slightly improved. Price of paddy has risen to 1 maund 24 seers per rupee at some places within the jurisdiction of the Kalkapore outpost from 1 maund 30 seers during the previous week. At other places prices are stationary.
44	Manbhoom „ 2, '89	0·86	Weather—seasonable. Sugarcane pressing still going on; probable outturn 8 to 12 annas. Probable outturn of oil-seeds 8 annas. New rice selling at 18 to 20 seers per rupee.

* Means of six days.
† Do. of five ,,

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years. The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 21 stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

for the week ending Friday, the 1st of February 1889.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Rainfall. Of week. Mean for district.	Of week. Normal mean. Explanation. ... Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the 5th February* 1889.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 1ST FEBRUARY 1889.

THE week commenced with fine settled weather everywhere, pressure was generally a little above the normal, and was increasing with moderate rapidity; temperature was high, and was also undergoing slight irregular upward changes; winds were northerly, and humidity fairly low. The important changes have been, first, the fall of pressure, which began everywhere on Sunday, and continued in North Bengal till the end of the week; second, the rapid fall which occurred in Bengal about the middle of the week in consequence of the eastward movement of the low-pressure areas in Central and Northern India; third, the rapid increase of humidity and temperature, and the general rainfall lasting almost everywhere for about two days.

The fine weather with which the week commenced continued everywhere in Bengal till Monday, and except Behar and South Bengal till Tuesday. The barometer continued rising on Saturday, but on the following day the fall set in, and continued without interruption for some days During those days changes of temperature were somewhat irregular, but generally it was falling slightly on Saturday and Sunday, and rising about the same the following two days. On Monday the fall of pressure was fairly rapid in South-West Bengal, and on Tuesday it fell there more rapidly. The greatest change on Tuesday, however, was in the extreme north-west of the province, where pressure gave way about a tenth of an inch. The humidity and temperature increased, and the wind direction in South-West Bengal became south-westerly, forming part of the cyclonic circulation of winds in Central India The sky was overcast in Behar and Assam, and a few showers fell in parts of these districts and South-West Bengal, the heaviest fall being 1·6 inches at Midnapore. On Wednesday the barometer continued to fall, and the disturbed conditions extended over the whole province. Except in Orissa, rain fell everywhere, more especially in Behar and some parts of South-West Bengal. The south-westerly winds had extended over almost the whole province, and the temperature was still increasing. On Thursday the centre of the disturbance was over Bengal; the barometer fell rapidly in South Bengal, in some parts as much as an eighth of an inch. Wind force increased, and the cyclonic motion was more distinct. Though cloud still continued, there was general rain only in North Behar and North Bengal, but in parts of these districts more than two inches fell. The temperature still rose, and humidity remained high. The depression passed rapidly over Bengal, and on Friday was on the extreme east of the province. In the north and east pressure was still falling, but in the west it began to rise rather rapidly. Rain had almost ceased to fall, except in East Bengal, and temperature and humidity were beginning to be reduced. The disturbed conditions began on the same day in the north-west and south west corners of the province, and after affecting the weather conditions everywhere during the latter half of the week, passed off to the east.

Pressure.—Pressure changes have been, except as to intensity, of the same nature during almost the whole week. On Saturday, the first day of the week, the barometer rose in some cases with considerable rapidity. In parts of Behar and North Bengal the rise was over a tenth of an inch After that a fall everywhere se in, slowly and irregularly at first, but with increasing intensity, especially in Behar and South-West Bengal. Up till Tuesday the greatest fall was a tenth of an inch at Patna on the 29th. Considerable falls occurred on the two following days, and altogether the reduction became about a quarter of an inch in Behar. During these days slight falls had been occurring in the southern districts, but they rarely exceed a twentieth of an inch. On Thursday, however, the barometer fell much more rapidly in South-West and East [illegible]al. At Midnapore the reduction amounted to three-tenths of an inch The total fall of [illegible]ssure at Midnapore is therefore considerably greater than at any of the stations in [illegible]ar. The total fall at Burdwan and Balasore was in each case about ·25″. The centre [illegible] the low pressure area must therefore have passed near Midnapore. Thus two low pressure areas almost simultaneously entered Bengal—one from the north-west over Behar, the other of a little greater intensity from Central India On Thursday there was a distinct depression passing eastward over Bengal. It moved away rapidly, and on Friday the pressure was rising on the west of the province

Temperature.—At the beginning of the week, temperature, though generally in excess, was only slightly so except in Orissa. On Saturday Cuttack had an excess of 8°. On the two following days the changes were generally small, and the excess amounts became very little altered. During these three days the temperature in Behar was about normal On the 29th a general rise set in, causing everywhere an excess of three to four degrees, the greatest being 7·8° at Calcutta On Wednesday, the 30th and Thursday small irregular rises were general, and in many places continued on Friday but the increase was usually small, and on the west of the province the temperature had begun to fall. The temperature has therefore been increasing, though slowly, during almost the whole week, and the mean for the week is, except in the north, considerably in excess. In Orissa and Chutia Nagpur the excess is about 5°.

The general range and distribution of temperature for the week, and its variation from the normal, is shown in the following table, where the average, maximum, minimum, and

mean temperatures at nine typical stations in the province are compared with the normal values for the same period:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 1st February 1889.

	Normal mean maximum temperature for the week ending 1st February.	Actual mean maximum temperature for the week ending 1st February 1889.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 1st February.	Actual mean minimum temperature for the week ending 1st February 1889.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 1st February.	Actual mean daily temperature for the week ending 1st February 1889.	Variation of actual mean from the normal.

Rainfall.—Rain commenced to fall in South-West Bengal and Behar on Tuesday, the 29th, and became general over the whole province the following day. The largest falls were in one or two cases over three inches in South Behar; but at many places in Behar and North Bengal, and at a few in South-West Bengal, more than two inches fell. The rain continued in North and East Bengal on Thursday, but was practically absent from South-West Bengal and Orissa. In some cases heavy showers fell on Friday in East Bengal, one station reporting almost two inches. The average fall has been largest in North Behar, amounting to nearly two and-a-half inches. The average in North Bengal is exactly two inches, and in South Behar very nearly two. South-West Bengal received only three-quarters of an inch, but the fall there, though general, was very irregular. In Orissa the average is little over a twentieth of an inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 1st February 1889:—

Meteorological Divisions.	Temperature						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1888.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The 4th February 1889.

C. LITTLE,
For Offg. Meteorological Reporter to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of January 1889.

	Inches.	Date.	Hour.
The mean pressure of the month	30·026		
The average pressure of January from 24 years' registers ...	30·014		
The highest pressure in the month	30·223	7th	10h.
The lowest pressure in the month	29·807	31st	16h.
The range of pressure	0·416		
	Hours.		
The total number of hours of bright sunshine during the month	274·5		
The maximum possible number of hours of sunshine ...	337·3		
	°		
The mean temperature of the month	67·6		
The average temperature of January from 24 years' registers ...	67·7		
The highest temperature in the month	85·6	19th.	
The lowest temperature in the month	48·6	2nd.	
The range of temperature during the month	37·0		
The mean daily range of temperature	22·3		
The greatest range of temperature in one day	27·3	3rd.	
	Per cent.		
The mean humidity of the month	73		
The average humidity of January from 24 years' registers ...	71		
	Inches.		
The mean vapour tension of the month	0·486		
The average vapour tension of January from 9 years' registers	0·467		
The mean cloud proportion of the month	1·21		
The average cloud proportion of January from 12 years' registers	1·51		
	Inches.		
The total rainfall of the month	0·16		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	0·13		
The average fall of January from 48 years' registers ...	0·43		
The greatest fall in 24 hours	0·12	30th	
The number of rainy days in the month	4		
The average number of rainy days in January from 24 years' registers	2		
	°		
The mean maximum equilibrium temperature of solar radiation during the month	133·6		
The mean difference of sun and air temperatures	54·0		
The greatest sun temperature	140·3	31st.	
The greatest excess of sun over air temperature	58·2	29th.	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	49·4		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	8·3		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	11·6	2nd.	
	Miles		
The mean movement of the wind per day	50·8		
The greatest movement of the wind in one day	167·0	31st.	
The greatest movement of the wind in one hour	20·0	31st Noon to 1 P.M.	

The number of hours with winds from each of the 8 points—

N. 90, NE. 30, E. 30, SE. 28, S. 47, SW. 101, W. 110, NW. 104, Calm 204.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park-street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 2·5° lower; and finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

C. LITTLE,

For Offg. Meteorological Reporter to the Govt. of India.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

MEMORANDUM.

For the week ending 19th January 1889 the returns from the principal Municipalities in Bengal present the following results.

1. The ratios per *mille* of births stood at 24·8, as opposed to 25·9 during the preceding week ending 12th January, and of deaths at 24·1 against 26·6. There was thus a retrogression in the registration of both births and deaths.

2. The following Municipalities registered the highest proportions of births and deaths :—

Births.

	Ratio per *mille.*
Monghyr	49·7
Utterpara	47·2
Naraingunj	45·5
Rampore Beauleah	42·0
Santipore	36·8
Bhagulpore	36·2
Purneah	31·2
Durbhanga	29·9
Hughli	29·5
Serampore	29·4

Deaths.

	Ratio per *mille.*
Naraingunj	82·8
Utterpara	47·2
Purneah	45·0
Puri	39·9
Suburbs of Calcutta	39·3
Serampore	33·4
Bali	31·6
Hughli	30·9

3. The only noticeable point in connection with the incidence of the specific diseases, in comparison with the outcome of the preceding week, is a sensible abatement in the mortality from fever—*vide* subjoined table :—

	Ratio per *mille* during the weeks ending— 19th Jan. 1889.	12th Jan. 1889.
Cholera	2·4	2·8
Small-pox	..	·1
Fever	8·9	10·2
Bowel-complaints	4·4	4·3
Injury	·2	·6
Other causes	8·2	8·6

4. Of the diseases mentioned above, fever proved noticeably fatal in the Purneah Municipality, where the rate of death was 34·6 per 1,000 of the population. Small-pox furnished no death. Injury exhibited normal fatality. Cholera, bowel-complaints and the maladies coming under the head of "Other causes" caused the highest mortality in the following Municipalities :—

Cholera.

	Ratio per *mille.*
Naraingunj	20·7
Bali	10·5
Howrah	9·1
Suburbs of Calcutta	5·0

Bowel-complaints.

	Ratio per *mille.*
Naraingunj	16·5
Bali	10·5
Suburbs of Calcutta	9·7
Hughli	9·4

Other causes.

	Ratio per *mille.*
Naraingunj	33·1
Serampore	21·6
Midnapore	15·5
Puri	14·7
Suburbs of Calcutta	12·0
Hughli	10·7
Dacca	10·4

5. The death-rates in relation to *Sex*, *Class* and *Age* stood as follows :—

According to Sex.

	Ratio per *mille.*
Males	26·3
Females	21·7
Ratio of male deaths to every 100 female deaths	136

According to Class.

	Ratio per *mille.*
Christians	21·7
Hindus	25·1
Mahomedans	22·3
Bhudhists	24·1

According to Age.

	Ratio per *mille.*
Under 1 year	200·6
1 and under 5 years	18·0
5 " 10 "	14·7
10 " 15 "	10·4
15 " 20 "	17·3
20 " 30 "	16·9
30 " 40 "	19·4
40 " 50 "	15·2
50 " 60 "	24·0
60 years and upwards	67·2

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

Increase. — Tons.

Coal 682

This increase is due to greater import of brick-burning coal.

Cotton piece-goods—

(1) European 13

This increase is due to steamer service between Jeagunge and Calcutta being closed.

Jute—

(1) Raw 118

This traffic is carried by railway this year, the river communication between Jeagunge and Calcutta having been stopped for want of sufficient water.

Grains—

(2) Rice 93

The increase under this head is due to greater despatches from intermediate stations.

(5) Others 27

This is due to steamer service between Jeagungo and Calcutta being stopped.

Railway plant and rolling-stock 99

This increase is due to more materials carried this year.

Oilseeds—

(1) Linseed 20

This is due to steamer service between Jeagunge and Calcutta being stopped.

Decrease.

Cotton, raw 8

This decrease is due to dull market.

Oilseeds—

(2) Mustard and rape 13

This decrease is due to dull market.

Silk, raw—

(2) Indian 9

This decrease is due to less export.

The 5th February 1889.

R. G. Mookerjee, *Manager, Nalhati State Railway.*

REVENUE DEPARTMENT—FAMINE.

Calcutta, the 6th February, 1889.

RESOLUTION.

READ—

Letter No. 84G.F., dated 24th January, 1889, from the Commissioner of Patna, reporting upon the prospects of the crops and condition of the people in the districts of that Division for the fortnight ending the 15th January, 1889.

THIS report has been prepared since the date on which the Lieutenant-Governor completed his tour through the distressed portion of the Patna Division, and touches on some of the topics discussed on the occasion of that visit. The general result of His Honor's enquiries was to confirm the estimate of the situation made as soon as the result of the winter harvest was known, and reported on the 10th December to the Government of India. Briefly it may be said that the yield of that crop was deficient throughout Behar generally, but the prospects of the *rabi* are at least fair, and the stocks from previous harvests are quite as large as usual. While this resolution was under preparation, the Lieutenant-Governor received reports of good rain, varying from 1½ to 2½ inches, having fallen over the whole of Behar on the last days of January. This may be expected to secure a good *rabi* wherever a spring crop has been sown and to keep prices steady; it will allow of cheena (a millet) being sown, and so adding something to the food-supply in April, and will have also the effect of inducing people to plough their lands at once,

while the most serious symptom noticed by the Lieutenant-Governor, viz., the deficiency of water in the tanks, will, to some extent have been remedied. None the less the circumstances are such as to call for watchfulness, for liberality in providing earthwork on roads somewhat in excess of that given in normal years, and for advances under the Land Improvement Act to zemindars willing to construct petty irrigation works, such as those on account of which the Lieutenant-Governor has by orders issued on the 1st instant granted a loan of Rs. 50,000 on the recommendation of the Collector of Gya. Further measures do not seem to be required at present except in a limited area, and it is hoped that the necessity for action involving any very serious expense will not arise. The area referred to as exceptionally situated is a narrow strip, stretching for about 90 miles from east to west along the Nepal frontier, through the northern parts of the districts of Chumparun, Mozufferpore, and Durbhunga, with some extension, not so clearly defined, in Bhagulpore. In the eastern part of this tract, as noticed by the Collector of Durbhunga after a careful enquiry village by village, the area of crop failure is not so continuous as elsewhere, fair and tolerable patches of land being interspersed with those on which the loss was almost complete. The rainfall in the afflicted area was very small, and it ceased prematurely, with the result that the winter rice crop, on which the cultivators mainly depend, was almost all lost, and the *rabi*, which is of no great importance in that neighbourhood, was sown under unfavourable conditions. This, taken with the high prices at present prevalent, has produced among the poorer inhabitants of the area in question a certain amount of distress, very different in degree from that felt during actual famine, but nevertheless quite unmistakeable, and such as to call for relief.

2. This relief has hitherto been afforded mainly in the form of employment on earthwork, which has been provided throughout the distressed area in a great number of places, so that every one desirous of earning a maintenance can get it within easy reach of his or her own home. The wages given are fixed in accordance with the provisions of the Famine Code according to the varying price of common rice, which in that part of the country is the staple-food of workmen, the scale being so adjusted that those who accept piece-work can earn the value of a full ration on the scale laid down by the Code, while those who can only perform light work get 75 per cent. of the value of such a ration. Work has to be given to all who seek it without exception, to women and children and those unused to the *khoodali*, as well as to skilled labourers, and payments are made daily under strict supervision. A large number of applications have been received for advances under the Land Improvement and the Agriculturists Loans Acts, and these are, for the most part, under enquiry. A small grant has also been made for charitable relief, with the intention that as long as there is no acute distress, it shall be used only for the support of wanderers, and in other urgent cases. The system adopted may therefore be described as consisting in supplying work for all on the wages prescribed by the Code, and supplementing the relief thus afforded by loans in approved cases after due enquiry, and a sparing resort to charitable assistance. In other words, the system laid down by the Famine Code is being adopted gradually and tentatively in adjustment to the deepening necessities of the situation. The works have been, and in some cases still are, merely test works, intended to lead up, should occasion arise, to the full development of large works conducted by professional agency; to be supplemented by circle establishments (organised at present only on very modest lines) for village enquiry and gratuitous relief. The aim of the Government has been to secure itself from being taken by surprise, and to arrange such an organisation as may easily be developed gradually in strength sufficient to cope with deepening distress.

3. The Lieutenant-Governor was most gratified to observe that these instructions had been observed by the district officers under the direction of the Commissioner; they have shown great zeal, thoroughness and intelligence in this work, which has been carried on with a due sense of their responsibility for preserving life on the one hand, and on the other for observing economy in the expenditure of public money. The statements submitted by Mr. Power, Collector of Chumparun, with this report show a daily average of 5,535 labourers employed in

his district during the fortnight on works carried on at the expense of this Government, 1,937 on private works, and 963 on the works of the District Board,—in all 8,435. Of these, 1,476 are women and 1,304 boys. The Government works in Chumparun, 32 in number, and also those conducted by private agency, take the form of facilitating irrigation, by re-excavating old tanks, and by damming up hill streams, and distributing the water thus collected at a head by means of pynes or channels. The labour for damming the streams was generally obtained simply by calling the villagers together, who worked voluntarily to save their crops by a traditional method. To the energy and intelligence of Mr. Henry, the late Collector, and to the professional skill and supervision of Mr. Sealy, District Engineer, are due the carrying out of these most useful works, but their task was greatly facilitated by the fact that the dams and the channels were all in the property of a single owner, the Maharajah of Bettiah, who gave all possible assistance, and there was none of the friction arising from the existence of numerous shareholders or divided ownership, which has in other districts baffled the endeavours of the local officers to get similar works undertaken. These irrigation channels have done immense good, and their value is thoroughly appreciated by the people. They are also so located as to make the assistance afforded to those wanting employment very complete. In Mozufferpore 927 persons were employed on the roads, at the expense of the District Board, during the first week of the fortnight, and the number during the second week increased to 4,100. The excavation of tanks at Government expense employed 1,902 persons, of whom 718 were women and 288 children. Mr. Bolton, Collector of Mozufferpore, writes that he has refrained from undertaking tank work more extensively, because the entire cost is borne by Provincial funds, while in his opinion the zemindars, who derive the chief gain from works of this class, should contribute a portion of the cost. He proposes in future to offer to excavate tanks if the zemindars pay half the expenses, which the Collector can advance under the Land Improvement Act. This suggestion is approved in principle by the Lieutenant-Governor, who would, however, leave to the discretion of the local officers the conditions under which assistance should be demanded from zemindars rather than lay down a hard-and-fast rule such as that proposed. The Commissioner's report does not give the actual number employed during the fortnight on the works in Durbhunga, but from the figures given to the Lieutenant-Governor while on tour, the daily average employed by the District Board on roads in the affected tract appears to have been about 4,000 The Lieutenant-Governor observes with satisfaction that private persons, in particular the Maharajah of Durbhunga, are excavating tanks on their own account. No expense has as yet been incurred by Government, but a list is being made of tanks upon which work can be commenced hereafter, should occasion arise.

4. A large share of the burthen of providing test works and ultimately relief works has fallen on the District Boards, the sums devoted to this purpose during the current year being in Gya, Rs. 13,000; in Mozufferpore, Rs 6,000; in Chumparun, Rs. 11,000; and in Durbhunga, about Rs. 1,00,000. Much of this is only what the District Boards would in ordinary circumstances have devoted to the repair and raising of the roads in the affected tracts; but in some instances they have forestalled the period for such work, and in others they have specially diverted sums from other parts of the district for relief purposes, and in all cases they have accepted the necessity of regulating their rates and methods of payment in accordance, more or less complete, with the requirements of the Famine Code. In a case like the present, where in no district is distress general, or extended beyond limited tracts, there is a natural tendency on the part of members representing the unaffected area to object to money and establishment being diverted from the usual channels of district expenditure to the special purpose of relief in the distressed area. But in the Lieutenant-Governor's opinion there can be no doubt that the duty of providing relief in the way of work should fall in a gradual scale with the deepening of distress first, on Local, secondly, on Provincial, and thirdly, on Imperial funds. The District Boards are not an organisation altogether outside the Government, but form an integral part of the administration of the country, specially organised

for the proper local expenditure of funds raised by local taxation, and from this point of view it becomes their duty, just as it is that of other departments of Government in time of serious distress or famine, to subordinate the ordinary objects and methods of their expenditure to the special consideration of saving life. This is the general principle. the application of which, however, has to be regulated, both in regard to funds and establishment, as well as in regard to methods, by the intensity of the distress in each particular case. The Lieutenant-Governor does not doubt that, should distress be found to deepen in the early months of the coming financial year, the District Boards will not be unwilling to act on the principle above laid down, and to devote (especially in the case of Mozufferpore) considerably larger sums to the special purpose of providing relief in the affected tracts. The Lieutenant-Governor is prepared, apart from the works which are or may be carried out by their own civil or professional agency, to assist the District Boards with additional establishment, and where, by employing the methods prescribed in the Famine Code, the cost of the work is materially increased beyond what under ordinary conditions it would have amounted to, the Lieutenant-Governor is willing to consider favourably applications for recoupment from Provincial funds.

5. In order to legalise the action which the Boards may take for the relief of distress, the Lieutenant-Governor has consented, at the suggestion of the Commissioner of Patna, to extend section 99 of the Local Self-Government Act of 1885 to that Division.

6. In Chumparun and Mozufferpore all relief work is managed by officers of Government or by the District Board directly, while in Durbhunga the intervention is permitted of gangers, or petty contractors. These men are supposed to make no profit out of the earthwork, being remunerated for their services by the rate given for "finishing," &c., and they are compelled by rule to employ all comers. The Commissioner desired to extend the system prevalent elsewhere to Durbhunga also, as he is not satisfied that the arrangements made in the latter district are such as to ensure that all applicants will really receive work, while the Chairman of the Local Board wished to retain an agency which he was satisfied he could control, and which certainly secured excellent results as far as the quality of the work done is concerned. The Lieutenant-Governor was convinced by the result of local enquiries that all applicants were admitted to the works, and that all who worked were regularly paid, so that the system had acted well up to the date of inspection. Moreover, he was satisfied that owing to the extraordinarily bountiful rice crop of the previous year and to other causes, the people in this sub-division of Madhubani are not as yet so hard pressed as their neighbours to the west, and that for the present at all events it is unnecessary to apply to this tract the full rigidity of the Famine Code. For these reasons, Sir Steuart Bayley is most unwilling to interfere in the details of arrangements made by a Board like that of Durbhunga, which has hitherto borne the whole cost of charitable relief, and is willing to permit the continuance of the system, as a temporary arrangement, as long as no acute distress is felt in Durbhunga, provided a proper agency is appointed to secure that all who seek work obtain it, and that wages are paid regularly. The fact that these objects have been secured up to a certain date, when distress was but little felt, is not, in His Honor's opinion, a sufficient assurance that they will always be attained. As suggested by the Commissioner, the system must be supplemented by the provision of task work, under direct management, for the feeble.

7. The Lieutenant-Governor is glad to receive the Commissioner's statement that grain stocks are everywhere reported to be sufficient, that prices are fairly stationary, and that there is no apparent increase of crime. The Lieutenant-Governor was specially glad to observe that wandering had nowhere commenced, as it does where famine is felt, and the small expenditure on charitable relief denotes the absence of cases of this class. The works now open serve not merely to mitigate immediate distress, but are also a test by which the pressure of the scarcity can be gauged. Should the attendance at these at any time indicate that the resources of the villagers are exhausted, it may be necessary to adopt the more active measures of relief, for which timely preparations have been made, but the Lieutenant-Governor hopes that the

recent rain will have done much to dissipate this danger. The Collector of Durbhunga reports in a demi-official letter that it has already had an excellent effect, and that the people are busy putting down *cheena* and *mung* which they will harvest in Baisakh, and which will help to tide them over to the next bhadoi. Ploughing for the next dhan crop and the preparation of indigo lands are also reported to have begun and to be giving work to the labouring classes.

ORDER.—Ordered, that a copy of this Resolution be submitted for the information of the Government of India, and that a copy be forwarded to the Commissioner of Patna for information and guidance.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

No. 3909—182Fam., dated Calcutta, the 10th December 1888.

From—P. NOLAN, ESQ., Secretary to the Govt. of Bengal, Revenue Department,
To—The Secretary to the Govt. of India, Revenue and Agricultural Department.

I AM directed to submit, for the information of the Government of India, the following report on the state of the crops in the Lower Provinces, and on the relief measures which have been or will have to be adopted.

2. It is within the knowledge of the Government of India that the rice crop reaped in the autumn season was in many places destroyed or injured by floods in July or August, and that the early cessation of the periodical rains has greatly diminished in many districts the yield of the winter harvest. The effect of the floods was most seriously felt in Orissa, and the attention of this Government was, in the first instance, directed to that division, the condition of which was briefly intimated in the telegraphic summary of the state of the weather and crops on the 21st of March 1888. With the gradual development of the symptoms of distress, periodical reports have been duly submitted for the information of the Government of India in the correspondence marginally noted.

No. 2633—99Fam., dated 9th August 1888.
No. 3066—119Fam., dated 10th September 1888.
No. 125T—R, dated 29th September 1888.
No. 292T—R, dated 7th November 1888.

It was at one time anticipated that the damage done to the autumn rice would almost certainly be followed by the loss of the winter crop on the unirrigated tracts, but this result has been averted by an unexpected and most opportune fall of rain in November, varying from 0·43 to 7·66 inches. The Lieutenant-Governor having, during his recent tour through all the districts of Orissa, had the means of making personal observations, as well as of consulting the local officials and experienced residents, is happy to be able to state that there is now no reason for serious apprehension in regard to that division. This statement does not extend to the Tributary Mehals, as to which the information received is imperfect, owing to the absence of communications, and the difficulty of ascertaining with precision the real facts in States administered by Chiefs possessing a considerable degree of independence. All that can be said in regard to these States is that there is no reason to expect any distress which will be beyond the resources of the Chiefs themselves. The expenditure sanctioned on account of relief in Orissa up to date is as follows:—

	Rs.
Road works	28,372
Charitable relief	15,000
Total ...	43,372

The sum of Rs. 90,000 was also assigned for loans under the Agriculturists Loans Act, 1884. It is believed that the outlay will be kept within these limits.

3. In Bengal Proper there has never been any anxiety as to the Eastern districts, the question in their case being only as to the amount of surplus food available for exportation. This will be considerable in the Chittagong Division. The autumn and winter harvests in the Western districts have been bad, and they cannot be said to be altogether out of danger, but there is no immediate prospect of their requiring relief.

4. Anxiety is now concentrated on Behar, which, for the present purpose, may be taken to include the Patna Division, with the adjoining district of Bhagulpore, having a total population of 17,030,102 souls. Intimation of the condition of this part of the country was

conveyed to the Government of India in the telegraphic summary of weather and crops for the week ending 23rd October 1888, and in subsequent summaries, while a copy of the correspondence on the subject has recently been forwarded to the Government of India with my letter No. 3682—156Fam., dated the 20th November 1888.

The following statement indicates the extent to which the rainfall has been deficient—

DISTRICT.	RAINFALL FROM JANUARY TO NOVEMBER.			RAINFALL OF CRITICAL MONTHS, SEPTEMBER AND OCTOBER.		
	Normal.	1873 (last year of scarcity).	1888.	Normal.	1873.	1888.
	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.
Patna	42·59	34 08	47·63	10·16	1·37	5·24

(a) The District Officer has not given separate figures for the comparative importance of the several harvests in the different parts of his district.
(b) The District Officer has not given separate figures for the outturn in the different parts of his district.

It may be compared with the following estimate of the outturn of 1873-74, compiled mainly from Mr. MacDonnell's volume entitled "Food-grain Supply and Famine Relief in Behar and Bengal."

Name of District.	1873.			1874.	Remarks.
	Rubbee.	*Bhadoi.*	*Aghani.*	*Rubbee.*	
	Annas.	Annas.	Annas.	Annas.	
Shahabad ..	16	4	2	16	The *rubbee* of 1874 was "fair average," though no rain fell in October or November 1873.
Sarun ...	13	10	2	7	Yield of subsidiary crops 10 annas.
Durbhunga ...	16	9	3	9	The *rubbee* and *aghani* of 1872 were good, and there was at least an average stock in hand—perhaps more. The great drought of 1873 in many places rendered it impossible to sow *rubbee* for 1874.
Mozufferpore ...	16	12	5	10	
Chumparun ...	14	10	2	14	*Rubbee* of 1873 is not precisely estimated, but the crops of that year generally are said to have been good; the *rubbee* slightly injured by hailstorms. The Collector made no estimate of the *rubbee* of 1874. Mr. MacDonnell entered it as "average," and added in a foot-note that on further consideration he thought this too favourable.
Gya	No estimate.	5	8	16	The figures for Gya are of little authority. The good *rubbee* crop in 1874 is attributed to rain in March.

5. The general result of this information is to suggest that considerable scarcity will be felt in Behar, but that it will be far less than that experienced in 1873 74. The recent rain as shown in the margin, affords a fair prospect of a good *rubbee* crop in the spring. On the whole, the Lieutenant-Governor, as at present advised, does not anticipate any necessity for adopting measures of relief in Behar generally. The people will, in his opinion, be able to tide over their difficulties, with such help as the poorer classes may be able to obtain from their zemindars, or from charity. There are, however, certain tracts of no inconsiderable extent in which the loss has been very marked, and in these it will be desirable to open test works at once, taking such further steps hereafter as circumstances may suggest.

District.	Rainfall in November.
	Inches.
Patna	0·69
Gya	0·57
Shahabad	0·46
Mozufferpore	0·22
Durbhunga (Tajpore) ...	0·30
Sarun	0·23
Chumparun (Motihari) ...	0·23
Bhagulpore	0·27

6. The chief seat of the distress is a tract stretching through Chumparun, Mozufferpore, and Durbhunga, and defined as about 90 miles in length from east to west along the Nepal frontier, taking in the Dhaka thana and parts of Motihari thana and Madhubun outpost of the Chumparun district, parts of the Bairagnia, Majorgunj, Sonbursa, Bela and Sursund outposts, and a small part of Pupri thana in Mozufferpore, and the Jali and Khajowli thanas of Durbhunga. The tract also extends into the Bhagulpore district. In this area the rainfall has been much more limited than elsewhere; in the Chumparun portion it is stated to be 26 to 28 inches, against an average of 55 inches, and to be badly distributed, no rain having

fallen since 9th September. For the Parihar Circle, in the north-east corner of the Sitamurhi sub-division, Mr. Lewhellin gives the following figures :—

	1888. Inches.	1887. Inches.
January	......	2·33
February	......	......
March	·79	·58
April	2·41	·79
May	1·53	8·59
June	2·87	16·36
July	6·63	5·86
August	2·74	19·71
September	·95	3·78
October	......	17·55
Total ...	17·92	75·55

The failure of the winter rice crop on this tract has been almost complete, while in parts the autumn crop failed also, and the prospects of the coming *rubbee* are indifferent.

7. It is believed that distress is also threatening in a strip on both sides of the Bagmutti river, in the Sinhar thana of the Mozufferpore district. In Gya a tract near Sherghati is said to be affected, and in Shahabad parts of the thanas of Bhabua and Chowsa. The Commissioner has not yet been able to supply a map of the worst tracts, but he is preparing one, and the importance of expediting the work has been urged upon him.

8. The Lieutenant-Governor in the early part of last month requested Commissioners to furnish full and accurate information as to crops, and to pay special attention to the repair of roads and improving of ferries used for the purposes of traffic in grain. Mr. Henry, Collector of Chumparun, rendered valuable assistance to cultivators by damming up the streams of his district, so as to utilize the water, and at his suggestion other Collectors have been encouraged to follow his example, the expenditure of a moderate amount from Provincial revenues for the purpose, and the employment of Government Engineers being sanctioned. Mr. Henry has recently been appointed to assist the Commissioner, whose duties are at present very onerous. The general policy adopted in regard to relief is indicated in the following extract from a letter addressed to the Commissioner of the Patna Division on the 5th instant :—

"The action taken by Local Boards in opening test works, and works designed to give relief, is entirely approved. As pointed out by you, 'the attendance on these test works, where the rate of wage to be given must not be in excess of the amount of wage prescribed in the Code, will afford valuable information as to the actual pressure upon the people.' You will understand that, in order really to serve this purpose as a test, these works must be properly supervised to ensure, in the first place, that wages are paid daily as prescribed by section 44 of the Code, without deduction or delay, and in the second place that the rates are duly fixed in accordance with the provisions of Chapter X. It is desirable to give piece-work under section 130 where practicable, as in that case labourers can obtain the full wage. If the system of task work is adopted, care must be taken that the tasks are not excessive, that their performance is enforced, and that the wage does not exceed the maximum defined in section 131. If these prescribed precautions are not observed, test works may not only be useless as an index to the degree of distress prevalent, but positively injurious, as suggesting false conclusions. The Board's works specified in Mr. Martin's note appear to be very suitable. It is, however, desirable that they should be supplemented by plans for further works to be undertaken in case a very large number should have to be accommodated, and the organization should be such as to preclude panic and confusion in the event of a sudden rush sor employment at a critical period, such as occurred in Durbhunga in 1883-84.

"Steps will be taken to prepare for the construction of the line of railway recommended from Durbhunga to Setamarhee should such a work be found necessary, and arrangements will also be made for the survey of the proposed line from Sukri to Joynuggur. The Lieutenant-Governor cannot, however, give any assurance that the railways will be constructed, as the determination of that question rests with the Government of India, and if the lines are not held to be reproductive, the work, regarded merely as one of relief, is open to the objection that the expense will be out of all proportion to the amount of employment given during the continuance of the scarcity. *Pains*, such as those proposed for the Gya and Chumparun districts, will probably afford far more employment at a smaller cost, and officers will be deputed by the Public Works Department to mature the plans proposed for this purpose by Messrs. Grierson and Henry.

"The instructions issued by you to Collectors contemplate the opening of civil agency works at the expense of Government, and this course will probably be necessary in the strip of land along the Nepal frontier, where the failure of crops has been most complete. If these works are of moderate extent, the Lieutenant-Governor would be glad to leave their supervision to District Boards, paying the cost from Provincial funds. Proposals for reasonable advances or grants to District Boards on account of works to be conducted under the

Code in distressed areas will be favourably considered; but it is to be remembered that by the rules for the grant of loans under the Local Authorities Loan Act, 1879, this Government cannot assign more than Rs. 5,000 for any one work without the consent of the Government of India.

"The Board of Revenue will be requested to see that advances for the construction of wells are made by the Opium Department in as liberal a manner as possible during the present season in the distressed areas. As to the definition of these areas for that purpose, you are requested to communicate directly with the Opium Agent. If in any instance the officers of the Opium Department find that the construction of a well is desirable, but that the cost cannot properly be advanced by the Department, the amount can be lent under the Agriculturists' Loans Act, 1884.

"The Lieutenant-Governor entirely approves of your proposals for making advances under the latter Act, and the sum asked for by you on that account in your letter No. 17G—F, dated the 28th November 1888, has been sanctioned in my letter No. 3823—165Fam., dated 3rd December 1888.

"In the same letter I communicated the Lieutenant-Governor's sanction to the sum asked for by you on account of gratuitous relief. It is understood that this money is needed merely for the casual assistance of wanderers and others, whose immediate wants it may be necessary to relieve. The facts reported do not as yet warrant anything of the nature of an organised search through chowkidars or other village agencies for cases of distress—a proceeding which could hardly fail to create the expectation that Government was about to undertake the support of the dependent portion of the population, which, as you are aware, forms a considerable proportion of the whole. The Code contemplates the grant of gratuitous relief only where relief circles have been regularly organised under section 11, and any attempt to give away money on a large scale without such organisation would probably lead to the worst consequences.

"In the sixth paragraph of your circular, dated 29th November 1888, you notice the recommendation of a Collector that Government should import rice with the object of keeping prices down, and in connection with this suggestion you refer to section 14 of the Code, under which local officers may appoint contractors for the supply of grain. It is most desirable to point out that contractors so appointed have nothing to do with importations for purpose of controlling prices, being merely the agents through whom relief officers buy the grain they may require for gratuitous distribution, or for wages paid in kind. Where, owing to the absence of traders, or to the localities affected being difficult of access, a reserve has to be formed, from which grain may be sold, the special orders of Government are required (sections 152, 157). In Behar the commercial class is efficient and communications are excellent—conditions which seem to preclude the idea of any interference with the ordinary course of trade. The Lieutenant-Governor has at present no intention of exercising the power of accumulating reserves, and can anticipate only evil results from any effort which may be irregularly made by local officers to regulate or supplement the ordinary action of the law of supply and demand, by which the necessaries of life are distributed. Such action would very possibly paralyse trade, private individuals being unwilling to compete with the State in supplying the markets; and the officers who might thus destroy the existing channel would be quite unable to supply its place. This should be clearly indicated to Collectors, as they will probably receive many proposals suggesting their interference to put down combinations among the dealers in grain, to use influence for the reduction of prices, to import at the cost of Government and sell cheaply, or otherwise to interfere with the course of trade The temptation to take action in this direction when prices are high is frequently great, and dread that Government officials may yield to it has probably a deterrent influence on private enterprise. On the other hand, a general and beneficial stimulus would be given to the trade by the assurance that its operation will remain free and uncontrolled.

"The result of your call upon Collectors for proposals as to establishments is awaited with interest. The Lieutenant-Governor is disposed to think that the formation of relief circles may be necessary in the area on the Nepal frontier, but that elsewhere it will be sufficient for the present to appoint officers to the charge of such works as may be opened for the purpose of affording relief. If it should subsequently be found desirable to undertake the work of relief organisation on a wider scale, it will always be possible to extend the scope of the system."

9. The following sums have been sanctioned up to date for purposes of relief:—

	Rs.
Loans under the Agriculturists' Loans Act	17,500
Gratuitous relief	4,000
Civil works	4,000

It is, however, understood that this very moderate outlay is no indication of the expenditure which may eventually be necessary.

No. 39G.F., dated Bankipore, the 20th December 1888.

From—JOHN BOXWELL, ESQ., Officiating Commissioner of the Patna Division,
To—The Secretary to the Government of Bengal, Revenue Department.

I HAVE the honour to submit the report for the fortnight ending the 15th December on the prospects of the crops and the condition of the people in the districts of the Patna Division.

PATNA.

2. The Collector writes:—"I have much pleasure in reporting that according to the latest and best information I possess, there is no portion of the district in which the failure of the crops has been so considerable that relief measures will have to be undertaken. On the 28th and 29th November, there was general rain throughout the district, the quantity recorded at the several registering stations varying from ·24 at Hilsa to 1·5 inches at Barh, and this rain has been of immense service to the growing *rabi* crop, and has also enabled the cultivators to sow *rabi* over a considerable additional area. There is now every prospect of a full outturn of *rabi*, which, if realized, will remove all cause for anxiety."

SARUN.

3. The Collector of Sarun writes:—"As you are well aware, Sarun is, humanly speaking, quite secure for the coming season, and I do not expect anything more than the inconvenience which results to the lower classes from a rise in the price of food-grains. The rainfall in the last week of November has done infinite good to the *rabi*. I have already telegraphed to you that the rain seems to have been from an inch to an inch and a half everywhere in the district, and I have now from detailed enquiries little reason to modify this report. The rain has been partial, as it has been all through the year, but it has been sufficient almost everywhere. Private letters confirm the official reports. Prices have fallen, and I have no doubt that under the excellent prospects of the *rabi*, they will fall still further.

SHAHABAD.

4. It is estimated that the *dhan* crop, which is now being harvested all over the district, will yield an average outturn of not less than 8 annas Some damage is reported to have been caused to the crop over a very limited area by hail, and on this area advances will, when necessary, be given under the Agriculturists' Loans Act, and leniency will be shown in collecting Government rents.

The Collector writes:—'*Rabi* is coming up well, and on the whole prospects have much improved of late. I do not think there is any cause for anxiety so far as this district is concerned.

5. From the information now submitted, it will be seen that Patna, Sarun, and Shahabad may be removed from the list of districts in which the condition of the people, present or prospective, need cause any anxiety. In future reports, therefore, I will not trouble Government with detailed information from these districts, but will state from time to time what the *rabi* crop prospects are. I am instructing the Collectors accordingly.

MOZUFFERPORE.

6. *Area affected.*—The area affected by the total or partial failure of the paddy crop remains the same as last reported, viz. a tract of from 300 to 400 square miles in the Sitamarhi sub-division lying along the Nepal frontier from Majorgunge on the north-west to Bheta on the east, and including the villages south of Bheta as far as Charout on the Madhubani boundary. This area is shown in the coloured tracing of the Mozufferpore district map herewith sent. The explanatory statement attached to the map gives information as to the outturn of the *dhan* crop in the various areas of the affected tract, and also as to the population.

To this area of 300 or 400 square miles, above described, may have to be added an unascertained as yet area of Sheohur thana. Mr. Macpherson, late Officiating Collector, has proceeded on a tour through this thana jurisdiction, and I hope to be able in my next fortnightly to give all necessary information regarding this area also.

7. *General state of the affected tracts.*—The outturn of the paddy crop is now estimated at nine annas in the Sudder sub-division and at 11 annas in the Hajipore sub-division, and this estimate the Collector believes to be rather under than over the truth. In both these subdivisions the *rabi* prospects have much improved, great benefit having resulted from the rain which fell on the 28th and 29th November. In Hajipore a 16-anna *rabi* crop is expected. In the Sudder sub-division the prospects of the *rabi* are favourable in the south, but not so good in the north.

Summing up the situation, the Collector writes:—"There is no cause for anxiety with regard to the Hajipore sub-division, and I see no cause for present anxiety with regard to any part of the Sudder sub-division."

As regards the Sitamarhi sub-division, the Collector is unable to report any improvement in the outlook. He quotes from a report furnished by the Sub-divisional Officer as follows:—"There has been no alteration in the state of the affected tracts. Since my last report no

rain has fallen, and the country is getting more and more dry. The tanks are fast drying up, and there is evey reason to apprehend that, even before the hot weather sets in, there will be a great scarcity of water within the above tracts."

The Collector is of opinion that there is serious cause for anxiety with regard to the condition of the people in the affected tracts, the great majority of whom are petty cultivators and labourers who are immediately affected by the failure of the paddy crop, by the high prices of food-grains, and by the loss of employment resulting from there being no paddy crop to cut. Mr. Bolton writes that the planters and zemindars are unanimous in stating that the failure of the paddy crop has been very serious, and that the people are suffering severely in consequence.

Bhadoi and *rabi* are not important crops in the affected area, and the *rabi* is said to be not doing well.

8. It will be seen from the explanatory statement attached to the map that in North Pupri and Sursand, which represent about one-third of the population of the affected tract, the outturn of the *dhan* harvest is estimated at six annas, and in North Sitamarhi, which represent, about one-sixth of the population of the affected tract, at four annas. It seems improbable, therefore. that distress on a large scale will be felt for some time to come over a considerable area of the affected tract.

Works have been opened, but no figures of the attendance upon them which can be considered trustworthy have as yet been submitted by the Collector. The wages given being, in my opinion, in excess of the rate of wage prescribed by the Famine Code, instructions were issued to the Collector to modify his rates accordingly, and I am awaiting information as to the actual wages now paid and the attendance on these works

9. I have deputed the Inspector of Local Works, Mr. King, to carefully inspect all the test works open in Chumparun and Mozufferpore, and to ascertain and report whether the work test is being strictly applied. and whether the wages given are those prescribed in Chapter X of the Famine Code. Upon receipt of Mr. King's report the necessary orders will issue and information will be supplied to Government.

10. At present it may be said that we have no indication of any value, from the test works opened in the Sitamarhi sub-division, as to the pressure upon the people. This information will, however, be supplied in my next report. No works are at present being carried out through tuccavi loans. Zemindars have been invited to take loans for this purpose, and it is expected that some will do so. The Maharajah of Durbhunga has directed the excavation of five tanks at a cost of Rs 10,000.

11. *Gratuitous Relief.*—No gratuitous relief has been given at the expense of Government. In Parihar the numbers of persons receiving such relief from the Maharajah of Durbhunga were as follows :—

279 on the 2nd, 356 on the 3rd, 461 on the 4th, 603 on the 5th, 798 on the 6th, 1,038 on the 7th, and 1,104 on the 8th.

The Collector is now enquiring into this upon the spot, and has made arrangements to obtain quietly information regarding the condition of the infirm and helpless persons in the worst villages of the affected tracts There is no reason to think that the time has come for giving gratuitous relief.

12. *Grain stocks* —Mr. Macpherson's enquiries lead him to believe that the stock of grain in Sitamarhi is sufficient, and that at present it is being hoarded. Importations of grain from surrounding districts are being made, and maize is coming in from Nepal.

13. *Organization of Circles.*—The affected area has been divided into three circles—

1st.—The Majorgunge and Sonbursa outposts in charge of the Sub-Divisional Officer.

2nd.—The Bela outpost and part of the North Sitamarhi thana in charge of the Sub-Deputy Collector

3rd.—The Sursund outpost and part of the Pupri thana in charge of a kanoongo.

In these three circles the officers in charge are recording the outturn of the paddy crop and prospects of the *rabi* village by village, are receiving applications for advances under the Agriculturists' Loans Act, and are making enquiries regarding infirm persons to whom relief may hereafter have to be given.

This sub-division of the affected area into three circles seems sufficient. I have informed Mr. Bolton that if he needs more assistance, I will appoint two kanoongos. I am separately addressing Government regarding superior officers.

The Assistant Superintendent of Police is in the Sheohur thana with instructions to record information regarding the condition of the people there.

14. *Sub-divisional Establishment.*—The whole affected tract has been thus provided for. Upon receiving fuller information as to any further increase of establishment required, I will address Government if necessary

District Engineer's Establishment and Tools.—Such civil agency works as may hereafter be opened will be under the District Engineer for the present. The increase already made to the District Engineer's establishment is shown in annexure to this letter. 1,500 kodalis are kept in reserve and more are being purchased, and the Collector has been asked to arrange for baskets, so that the labour of the women and children may be fully utilized.

GYA.

15. The Collector of Gya furnished the Secretary to Government in the Public Works Department with a coloured map showing the affected areas, and he has sent me a copy of this

map. His estimate, as shown by the map, being less favourable than facts appear to justify, he has been referred to demi-officially. I am now in a position to submit an estimate which I have reason to believe more correctly represents the actual state of things. Mr. Grierson reports an average nine-anna *dhan* crop in his district, and with an average nine-anna crop there need be no apprehension that distress will be felt over any considerable proportion of the district area. I have shown on a tracing which accompanies this report the localities in which the Collector now states " there is apprehension of distress occurring within the next month, and where relief works will probably be necessary."

Details concerning these areas are given in the explanatory statement attached to the map tracing, which I have not, however, coloured. I deem it better to send this information, imperfect as it is, to delaying the divisional report.

16. It will be seen that the revised estimate puts the affected area at 310 square miles with a population of about 147,000 persons Over a tract the population of which represents two-thirds of the population of the affected area, the *dhan* outturn is estimated at from 4½ to 5 annas, and no immediate distress there need be anticipated Over the remaining area the failure of the crop has been almost complete. Mr. Grierson shows another area " where there is no immediate apprehension of distress, but where relief measures may be necessary later on." This area he estimates at 1,465 square miles, with a population of 562,000 persons. I propose discussing these figures with Mr Grierson, and if necessary will, on return from my present tour, carefully visit portions of this tract. Until I have satisfied myself as to the full meaning of these figures, I will not ask Government to take them into consideration.

17. *General state of affected tracts.* - Test works have been opened, but as labourers are not flocking to them it may be inferred that the reaping of the harvest is giving sufficient employment. The attendance upon these works when the harvesting has been completed will afford evidence of the actual pressure upon the people.

There appears to be no cause for entertaining apprehensions regarding the condition of the Jehanabad and Aurungabad sub-divisions, and only comparatively small areas of the Sudder and Nowada sub-divisions have suffered from the failure of the crops

Mr Grierson writes: —" The late rainfall, though satisfactory in the north, centre, west and south-west of the district, was not sufficient for the *rabi* sowings elsewhere. Still, even where it was least copious, it has done great good to the *rabi* crops which were already sown, and taking the district as a whole has facilitated the sowing of more than half of the *rabi* land which had hitherto been lying untouched for want of moisture.

" In the Nowada sub-division it has enabled the cultivators to sow half the unsown area, and so in the Sudder sub-division except in pergunnah Sherghati and in the western portion of Barrachuti, where large tracts of *rabi* area, called *tcur* lands, remain unsown. No special cases of distress have been reported from any portion of the district The paddy crop is being harvested everywhere, which gives the labourers plenty of employment."

One or two good showers of rain during the month ending the 15th January next will everywhere improve the prospects of the *rabi* crop, and will, in the Collector's opinion, reduce the apprehensions of scarcity to a minimum.

18. *Public works open in or near affected tracts* —Test works have been opened by the District Board on the roads shown by numbers in the accompanying map tracing, but no returns have as yet been submitted. The attendance if there is any, upon these works is extremely small. The District Board has set aside a sum of Rs. 12,000 for expenditure on test works, and at Mr. Grierson's earnest request, and as the outlay will prove remunerative to the Government estate, I have, in anticipation of the sanction of Government, authorized him to incur expenditure up to a limit of Rs. 1,000 in making *gendas* or water reservoirs in Sarawan. As the District Board has provided funds for test works, I deem it desirable that Government, in its status of landlord of Sarawan, should also assist in the same direction The sum sanctioned will be expended on work carried out in accordance with the provisions of the Famine Code.

19. *Gratuitous relief.*—A sum of Rs. 200 has been allotted to the district under this head, but there has been no expenditure up to the present.

20. *Grain stocks.*—At present there is sufficient grain in the market for local supply. People of all classes are getting food from the paddy that is being harvested. Bengal rice is being imported by rail and distributed to the mofussil from Gya town.

21. *Organization of Circles.*—Mr. Grierson has submitted an elaborate scheme of circles which he will be asked to reconsider. No circle organization will be required in this district for the month ending the 15th January.

22. *Sub-divisional establishment.*—No immediate increase of establishment is called for. If necessary, I will depute one or two kanoongos to assist Mr. Grierson.

23. *District Engineer's establishment and tools.*—The Inspector of Local Works will shortly proceed to Gya and decide, in consultation with the Collector and District Engineer, what increase of establishment will be needed. The Collector has been instructed to make provision for spare *kodalis* and baskets, so that labour may be properly utilized.

CHUMPARUN.

24. *Area affected.*—The area affected by the total or partial failure of the paddy crop is shown in the map now forwarded. The part in which the failure of the crop has been most complete is marked in purple: that in which the failure has been less severe, or in which,

owing to irrigation and other causes, present prospects are somewhat better, is coloured indigo.

Roughly speaking, the affected tract is now reported to comprise about two-thirds of the jurisdiction of the Dhaka thanna, *i.e.*, about 200 square miles. According to the census of 1881, the population of the Dhaka thanna amounted to 253,992 persons. Allowing for a normal increase at the rate of 1·2 per cent. per year, it may be now put down at about 275,000 persons. The population therefore of the affected tract as shown in the map may be put down at 180,000.

25. *General state of the affected tract.*—No information has been furnished as to the estimated outturn of the *dhan* harvest in the Bettiah sub-division, and the remaining portion, *i.e.*, the unaffected tracts of the Sudder sub-division. The latest information, which, however, is not new and may have to be modified, as the result of later observation gave the estimated outturn of the *dhan* harvest at 9 annas in the Bettiah sub-division and at 6 annas in the Sudder sub-division. There is no reason to anticipate that the condition of the people anywhere outside an area equal to the Dhaka thanna jurisdiction need cause any apprehensions. Excellent reports have been received by the Opium Agent regarding the prospects of the poppy crop in the Bettiah sub-division, and in the Sudder sub-division, although the crop is reported to be backward, it is not reported to have failed.

26. Test works have been opened in the affected tract. A statement is appended which shows the attendance on these works. The number of persons on them has increased very rapidly, although the rate of wage given is below the rate usually given in the district. If the work test has been strictly applied—and I have deputed the Inspector of Local Works to ascertain from personal observation and to report upon this point—there can be no doubt that the attendance upon these works in Chumparun indicates that pressure is already being felt. The rates given are 7 *dibuas* or *lohiya* pice to full-grown men, 5 *dibuas* to women, and 1, 2, 3 and 4 *dibuas* to children, six and-a-half *dibuas* representing one anna.

The District Engineer has furnished me with a statement of the actual cost of the ration defined in the Famine Code, and from his figures it would appear that the rate of wage given on the test works—where up to the present only task work has been demanded—represents not more than 75 per cent. of the full wage. Instructions have been given to him to introduce without delay, wherever practicable, the system of payment-by-results, and I hope in my next fortnightly to be able to state what result this measure has in affecting the number of persons upon the works. Considering that *dhan* harvesting operations are not yet finished, the attendance on the works in Chumparun must, if the work test has been properly enforced, be held to indicate that pressure resulting from a marked failure of crops is felt over a well-defined tract.

27. *Gratuitous relief.*—No gratuitous relief has been given.

28. *Grain stocks.*—The grain supply in the local markets is so far sufficient, and prices are steady at fairly low rates. No complaints of insufficiency of supplies have been received. It is satisfactory to be able to report that Indian-corn is now being freely imported from Nepal.

29. *Organization of Circles.*—The Collector reports that there is no need to open relief circles before March. Should circumstances then render it desirable, two relief circles will be opened. I need not now give any fuller information under this head, as establishment to man these circles is not at present required.

30. *Sub-divisional establishment.*—No extra Deputy Collector will be required for the next three months Should the Collector represent the necessity of having one or two extra kanoongos, I will comply with his requisition and report my action for the sanction of Government.

31. *District Engineer's establishment and tools.*—The following extra establishment is required by the District Engineer—

		Rs.
1	Supervisor at	200
1	Overseer „	50
1	Surveyor „	25
1	Clerk „	30

Having regard to the limited establishment under Mr. Sealy, the Chumparun District Engineer, and to the large attendance upon the test works, &c.—attendance which may be expected to increase considerably during the next month—I request that the officers now applied for may be directed to join at once. It is impossible to start the payment-by-results system or to supervise and control effectually labour upon task work with a smaller increase of establishment than that now applied for. I trust therefore that Government will be pleased to pass very early orders upon this application. The Collector has already been instructed to make due provision of *kodalis* and baskets, so that labour may be properly utilised.

DURBHUNGA.

32. Later observation has enabled the Collector to modify his estimate of the affected areas in his district.

A map tracing is attached to this report, which is a copy of the map furnished by the District Engineer to the Secretary to Government in the Public Works Department. Mr. Beadon, after explaining that in his opinion the map furnished to Mr. Martin gives "an erroneously exaggerated account of the drought," has thus embodied his own estimate

of the actual condition. He writes—"I have shaded with pencil what I believe to be the area of total failure, and with check lines the part where the crop may not have been on the average above four annas. The former strip I should put at about 60 miles by 8, or 480 miles. The next portion would be a strip representing in length the widest stretch of the district with an average breadth of five or six miles."

The width of the district here is about 60 miles, so this area, *i.e.*, the area indicated by check lines, would be some 300 square miles.

33. *General state of the affected tract.*—Adverting to the condition of the district as a whole, the following information is of value :—

The *dhan* crop in the Tajpore sub-division is reported to be "a good 12-anna crop, The moisture for the *rabi* is fairly good. An ordinary amount of rain in January or February will produce a good *rabi*."

The Manager of the Nurhun estate in that sub-division writes—"All fear of the failure of crop has been dispelled by the rain of the night of the 28th and 29th November, and I sanguinely hope that we shall have bumper *rabi* crops in the villages of this estate. The outturn of the *aghani dhan* has been about 12½ annas."

In the Durbhunga sub-division the outturn of the rice harvest is better than was expected, and the light showers which fell on the 29th November are reported to have benefited the *rabi*.

Mr. Beadon reports that he has succeeded in obtaining an estimate, village by village, for 115 villages belonging to Rai Gunga Prasad, situated in all parts of the district, which g veson the whole an average outturn of 10½ annas for the dhan crop. The estimate which was prepared two months ago, Mr. Beadon, as the result of his personal observation, states might be raised to 12½ annas. Regarding the eastern portion of the Durbhunga sub-division, the District Superintendent writes:—"The crops all along the road from Rosera to Benepore are excellent."

Rain fell subsequent to the dates to which the above opinions refer, and the *rabi* has benefited thereby. The Collector writes:—"Driving through the town of Durbhunga I could see no traces of high prices telling upon the physique of the people." As the prices now reported to be prevailing there are rice 16 seers, *makai* 22 seers, *marua* 23 seers, it is quite certain that the people are not suffering in any way from pressure of high prices.

33. The following information relates to the Madhubani sub-division. The places named are marked on the map:—

In the Phulparas and Madhubani thanas the *dhan* is being harvested and the prospects of the *rabi* crops are favourable.

On the 12th December the following are the reported rates for coarse rice at the various police-stations:—

	Seers.
Benepatti	12
Madhuapore	11
Lankaha	14½
Madheypore	10
Phulparas	14½
Ladaria	18
Madhubani	13 to 14
Jhanjharpore	17

34. Mr. Beadon writes:—"Personal enquiry by myself and Mr. Grier, Sub-divisional Officer, has satisfied us that the outturn on the Alapore pergunnah will be 9 or 10 annas at least. In Jubdee there is an 8-anna crop, though here and on Alapore there are scattered villages which have suffered much. All the way from Naraya to Mohadeo Nath (nine miles) the crops are first-rate, but they are less good, though very fair, up to the frontier. For this reason I have greatly curtailed the area of total failure, as already explained."

35. It is much to be regretted that up to the 15th instant the Collector had not opened any test works as directed. He explains that he omitted to do so, as he misapprehended the purport of the orders communicated to him. He has now received explicit orders to open these works at once.

The attendance upon the District Board's works, where the normal rate of wages is paid, affords no indication whatever of the pressure upon the people. In the first place, these works are under contractors who engage only what may be termed skilled labour, and consequently women and other feeble persons can get little or no employment on them, however great their need. Skilled labourers, on the other hand, are able to earn much more than the full wage of the Famine Code.

I have asked Mr. Beadon to open some of the works sanctioned by his District Board, and for which funds have been allotted by them, as test works. By introducing the system of payment-by-results, these works can be executed without wasteful expenditure of the Board's funds.

36. The estimates framed of the actual condition of this district have varied so much from time to time that I consider the practical evidence which test works, properly supervised, would afford of the pressure upon the people, of more importance than estimates of crop outturns which, under the most favourable conditions, must be more or less conjectural. While attaching much value to estimates which have been so carefully considered by the Collector, I think it necessary to have the correctness of these estimates, affecting the condition of the people, checked by the evidence (which, if the supervision is efficient and rules attended

to, must be considered to be positive evidence) afforded by test works. I shall at once place myself in correspondence with Mr. Beadon, who, in his report just received, discusses the relative value of test works and works carried out under normal conditions, and issue to him explicit instructions for his guidance.

37. I am at present on tour in the Durbhunga district, and in my next narrative I hope to be able to express an opinion, the result of personal observation, as to the condition of the affected tracts. At present, I can only forward the Collector's estimate, which, as I have remarked, is not supported by any evidence obtained from attendance on test works. There can be no doubt that there has been a marked failure of the rice harvest in well-defined areas in this district. As to the effect this failure has had upon the condition of the people, I regret to say I am not at the present time in a position to give precise information.

38. *Gratuitous relief.*—No gratuitous relief at the expense of Government has been given.

39. *Grain stock* —The Collector, who has made enquiries from everybody whom he meets, is satisfied that there are stocks of grain in the country. He discusses figures of export of grain obtained from the railway authorities in support of his opinion. He is able to give a statement showing stocks of over three lakhs of maunds stored in the Madhubani sub-division, which stocks do not include any portion of the new crop. He writes:—"In the face of the above returns, I can have no doubt that the stocks throughout the sub-division (Madhubani) are ample for the support of the population. For the rest of the district the stocks of grain are wholly sufficient."

40. The Collector is of opinion that no circle organisation is required at present. Assuming his estimate of the failure of crops to be correct, it seems desirable that the area which he considers to be seriously affected should be divided into two or three circles, which might be placed in the charge of officers of the status of kanoongos, whose duties would be to make enquiries in cases of applications for loans under the Agriculturists' Loans Act, verify estimates as to the crop outturns, and generally collect all information of value should it be necessary hereafter to organise systematically measures of relief. Unless some such sub-division of areas is carried out, it is possible that the Sub-divisional Officer may not be kept fully informed as to the condition of the people. The Collector will be addressed regarding this. One kanoongo, one mohurir and one peon would be a sufficiently large establishment for each of these circles, and if their entertainment is deemed necessary, I will pass orders which will be subsequently represented for Government confirmation.

41. *Sub-divisional establishment.*—No increase is required at present. An experienced Joint-Magistrate is stationed at Madhubani, Mr. Greer. Mr. H. Lee is under orders to join at Durbhunga, and if vested with appellate powers under the Criminal Procedure Code, and powers under certain collectorate laws and rules, will be able to relieve Mr. Beadon of much routine work. The references necessary upon this point will be made to Government in the Judicial Department.

42. *District Engineer's establishment and tools.*—No application has been submitted for an increase of the District Engineer's establishment The Collector has not, it would appear from his report, apprehended that test works are to be under supervision of the District Engineer. For the works carried out at normal rates from the District Board's funds, the District Engineer appoints establishment as required. Mr. Stevens has applied for the following increase of establishment "to enable him to conduct relief works, and at the same time to carry on the current duties of his district":—

1 Assistant Engineer.
6 Overseers.

It is desirable that Mr. Stevens should have a sufficient establishment, and that all test works opened should be placed under him.

The Collector has expressed no opinion upon the scale of establishment applied for. I have no information which enables me to pronounce upon it, and I leave the matter therefore for the consideration of the Public Works Department. I shall be glad if very early orders are passed, and that any officers deputed to Mr. Stevens' assistance may be ordered to join without delay, so that he may be in a position to take over charge of test works.

The attention of the Collector will be called to the necessity of having a sufficient supply of tools in stock.

43. *Financial statement.*—The following statement shows the funds at the disposal of Collectors:—

DURBHUNGA.

	Rs.
For loans under the Land Improvement Act	10,000
Ditto Agriculturists' Loans Act	7,000
For gratuitous relief	300
Total ...	17,300

No account of expenditure has been received; but it is believed that a very small portion of this allotment has as yet been utilized. The Collector will not require any further allotment of funds for the present According to a revised statement lately received, the District Board has set aside Rs. 56,800 for expenditure on works to be carried out in the Sitamarhi sub-division.

A portion of this sum will, I trust, be devoted to expenditure upon test works.

MOZUFFERPORE.

The allotments made are—

	Rs.
For loans under the Agriculturists' Loans Act	5,000
Gratuitous relief	500
For civil agency works	4,000
	9,500
Given by District Board and to be employed on test works	6,000
Total ...	15,500

No account of expenditure has yet been received. Mr. Bolton having only lately taken over charge, is not able to frame an estimate of his probable requirements, which he promises to submit shortly. No present allotment of funds is therefore required.

GYA.

The funds at Collector's disposal are—

	Rs.
For loans under Agriculturists' Loans Act	3,000
For gratuitous relief	200
Sanctioned by Commissioner for expenditure on test works in Sarawan estate ...	1,000
	4,200
Allotted by District Board for expenditure on test works	12,000
	16,200

Details of expenditure not received. No further allotment of funds at present therefore seems required. The Collector has estimated for giving out a large sum on loan to agriculturists, but this will not possibly be necessary. Until I have discussed the matter with the Collector, I refrain from submitting his estimate.

CHUMPARUN.

Receipts.

	Rs.	A.	P.
For advances under Agriculturists' Loans Act	2,500	0	0
For gratuitous relief	200	0	0
	2,700	0	0
From Maharajah of Bettiah out of Rs. 5,000 promised	2,500	0	0
From District Board for employment on test work	10,875	0	0
Total ...	16,075	0	0

Expenditure.

	Rs.	A.	P.
Loans	Nil.		
Gratuitous relief	Nil.		
On test works	2,198	8	4
	759	5	9

Balance.

	Rs.	A.	P.
Government grant	2,500	0	0
	200	0	0
Private subscriptions	1,707	4	6
District Board's funds	8,676	7	3
Total Balance ...	13,083	12	9

The Collector estimates that his expenditure during the month ending the 15th January will be—

	Rs.
For advances under Agriculturists' Loans Act	2,500
For gratuitous relief	200
Payment of labour on test works, maximum average expected 20,000 at 13 souls per rupee	47,678

Of this sum the District Board supplies Rs. 8,676 and the Maharajah of Bettiah Rs. 1,707, leaving a balance of Rs. 37,295, for which the Collector requests that a grant from Government may be made.

Until the reports of the Inspector of Local Works are received, I am not in a position to say whether the attendance upon the test works cannot be diminished, or at any rate prevented from increasing over rapidly by a more rigid adherence to the provisions of the Famine Code. I will therefore only ask Government to sanction a grant of Rs. 10,000

to Chumparun for civil agency works. In my next report I shall be able, I hope, to make a forecast based upon fuller information of the probable expenditure during the coming month.

44. I have submitted in some detail information upon points of importance for all districts of the division. It will be seen that the areas which are stated to have suffered severely from the failure of crops in the several districts of the division are—

An area of from 300 to 400 square miles in the north of the Sitamarhi sub-division of the Mozufferpore district, with a population of about 250,000 persons, *plus* an unascertained area in the Shewhur thana to the west of the sub-division.

An aggregate area of about 310 square miles, the component areas being situated in the Sudder and Nawada sub-divisions of the Gya district, with a population of about 150,000.

An area of 480 square miles along the northern frontier (with a population of about 270,000) of the Modhubani sub-division of the Durbhunga district, and immediately below this an area of 300 square miles with a population of about 200,000. In this latter tract the failure of the crops has been much less marked.

Test works have been opened in Gya, but no labourers have flocked to them. This indicates that at present the pressure resulting from failure of crops is not severe, labourers being able to obtain more lucrative employment elsewhere. I learn from the Opium Agent that the prospects of the poppy crop all over the Gya district are magnificent; and as the outturn of opium in this district varies from 14,000 to 16,000 maunds in a good year, there is reason to expect that the Gya cultivators will receive nearly 30 lakhs of rupees for their opium this year. Taking this fact, with others, into consideration, I entertain hopes that the distress to be experienced and dealt with in Gya will be much less than indicated even by the revised estimate I have now submitted.

Test works have not been opened in Durbhunga and Mozufferpore, and so there is no trustworthy evidence to show what the pressure upon the people there is. There seems to be no reason to doubt that the crops have seriously failed over well-defined areas, and that assistance will have to be given to a large number of persons in these tracts either in the form of advances of money, or by providing them with employment. More than this cannot be now said.

In Chumparun the attendance upon the test works has increased very ominously. If the work test has been strictly enforced, as the wage given appears to be the wage prescribed by the Famine Code, we have for this district at least a trustworthy and positive indication that pressure is now being felt, and that we may expect to have on our hands a gradually increasing number of persons to whom assistance in some form or other must be given probably until the harvesting of the next *bhadoi* crop. Grain stocks everywhere are sufficient, and importations of Indian-corn are being made from Nepal, which shows that in the Terai there is a surplus of grain available for export. This is a fact of much importance, as the Nepal Terai immediately adjoins the affected tracts in Mozufferpore, Chumparun and Durbhunga.

The prices of grain are fairly steady, and except at one or two stations in the north of Madhubani are not excessively high, although above the normal.

No cases of distress have been reported, and it has not been found necessary to give gratuitous relief.

A scheme of works upon which the largest number of persons likely to flock for employment can be employed has been prepared for each district.

The strengthening of establishments where necessary has been considered.

Orders have issued for the immediate opening of test works, and the Inspector of Local Works has been deputed to inspect them, and to see that the ordinary contract system is not introduced, that the work test is rigidly applied, and that the prescribed rates of wage are given.

Finally, I may add that I am myself on tour, and will visit the Madhubani and Sitamarhi sub-divisions before returning to head-quarters.

List of Test Works (Gya district).

1. Sarawan pain.

	Total ...					68,239,900

Taking the work at Rs. 2 per 1,000 cubic feet, and calculating the number of persons at 13 for the rupee, these works were for 26,000 persons' employment for three months.

It is impossible to say which particular civil agency work is more necessary than another. The circles into which they have been grouped are so small that there would be no difficulty in people of any part of the tract attending any of these works.

It should also be noted that the calculation of 13 persons working per rupee assumes that they are all adults obtaining the full wage. This of course is not the case, and employment would therefore be afforded by these works for many more people than the above numbers.

CHUMPARUN COLLECTORATE, W. R. BRIGHT,

The 11th December 1888. *Officiating Collector.*

No. 4138—204, dated Calcutta, the 31st December 1888

From—P. NOLAN, Esq., Secretary to the Government of Bengal, Revenue Department (Famine),

To—The Commissioner of the Patna Division.

I AM directed to acknowledge the receipt of your letter No. 39G.F., dated the 20th instant, which contains, in the form of a report for the fortnight ending 15th December, a clear and comprehensive statement of the condition of the people in your division.

2. It is observed with satisfaction that Patna, Sarun and Shahabad have been removed from the list of districts as to which anxiety is felt, and that in Mozufferpore, Durbhunga, and Chumparun, the areas affected, with the degree of failure of crops in each, have been indicated on suitable maps. The general purport of the information given may be summarised as follows:—

Statement showing areas of crop failure in North Behar.

DISTRICT.	Area affected in square miles.	Population of area.	Estimate of outturn of winter crop on area of each.	REMARKS.
Chumparun	200	180,000	Outturn small.	
Durbhunga ..	400	200,000	Failure almost complete.	Population not stated; taken at 500 the square mile.
Ditto ...	300	150,000	Above 4 annas.	Ditto.
Mozuffer-pore. North Pupri ...	350	30,000	6 annas.	
Sursund ...		60,811	6 „	
Bela ..		47,090	Nil.	
North Sitamarhi		40,000	4 annas.	
Sonbursa ...		45,181	1 anna.	
Majorganj ...		33,065	2 annas.	
	1,250	786,147		

It does not appear that the stock of grain is in any place deficient. In regard to the district of Gya, in South Behar, you have not yet satisfied yourself of the extent of the failure, and the Lieutenant-Governor accepts the fact that the matter is still being discussed with the Collector as evidence of the pains taken to arrive at the truth.

3. The Lieutenant-Governor notices with approval that you are giving effect to the instructions conveyed in my letter No. 3857, dated 5th December 1888, as to the measures of relief to be adopted. The strict observance of the rules prescribed by the Famine Code for the control of test works is properly insisted on by you as essential to the attainment of the object with which such works are maintained. It seems that it is only in Chumparun that any attempt has hitherto been made to carry out the rules, but it is uncertain whether they have been effective even there, and the Inspector of Local Works has, it is observed, been deputed for the purpose of ascertaining this fact. Since the submission of the report the Lieutenant-Governor learns with satisfaction that District Boards have permitted their works to be executed on the Code system.

4. Separate orders have been issued sanctioning the grant of Rs. 10,000 proposed by you for civil agency works in Chumparun, and the extra establishments for which you apply. The Lieutenant-Governor is pleased to observe that the Maharajah of Durbhunga has given extensive relief on his estates.

No. 57G—F, dated Bankipore, the 5th January 1889.

From—JOHN BOXWELL, ESQ., Offg. Commissioner of the Patna Division,
To—The Secretary to the Government of Bengal, Revenue Department.

I HAVE the honour to submit the report for the fortnight ending the 31st December 1888 on the prospects of the crops and the condition of the people in the districts of the Patna Division.

2. *Sarun, Shahabad, Patna.*—The prospects of the *rubbee* in these three districts are satisfactory. A fall of rain would much benefit the standing crop. The Collector of Shahabad, who has been out on tour, is of opinion that the average outturn of the *dhan* harvest in his district is not less than 10 annas.

Little fluctuation is reported in the selling prices of food-grains.

3. *Gya.*—The Collector, in his report for the fortnight ending the 31st December, fully confirms the accuracy of the information already submitted to Government that in the Gya district the affected area is 310 square miles, with a population of about 147,000. With reference to the area of 1,465 square miles with a population of 562,000 persons, in which the Collector reported that "there is no immediate apprehension of distress, but where relief measures may be necessary later on," I am now able to report that over this area the outturn of the *dhan* harvest is reported to be 7½ annas, or about half an average outturn. This information appears to me to fully justify the opinion I had formed that in this tract the pressure upon the people cannot be so great as to necessitate Government intervention. Mr. Grierson will be at Bankipore when the Lieutenant-Governor arrives on the 12th instant, and by that time he will have been able to collect fuller information regarding this debateable tract.

The Collector considers that only three-fourths of the area ordinarily under *rubbee* has been sown down this year. He gives no information as to the prospects of the standing crop, regarding which all that can be said is that so far it is healthy and would benefit from a fall of rain.

Public works open in or near the affected tracts.

4. The test works opened by the District Board in the vicinity of affected tracts not having attracted any labourers have been closed, but will be re-opened after the *dhan* crop has been harvested should this be necessary. On the test works opened at Government expense in mehal Sarawan, where payments are made by results to able-bodied labourers and by task work to females and children, the attendance is 45 persons only. These facts indicate that at present the harvesting of the winter rice crop has supplied all the employment required, and also, it may be said, that the pressure upon the people is at present not marked.

Gratuitous relief.

5. None has been given.

Grain-stocks, and prices of food-grains.

6. The supplies of grain in all the markets are sufficient. Coarse rice is selling at from 17 to 18 seers (Government weight) in the interior, and at 16 seers in the head-quarter towns.

Establishment.

7. No increase of establishment required.

Area affected.

8. *Mozufferpore.*—Mr. Bolton, who spent the 17th December and the six following days in inspecting the whole of the affected tract, is able to confirm the information already submitted to Government that the area of bad failure comprises from 300 to 400 square miles, as defined in the map forwarded to Government with the last report from this office. The Collector states that the average outturn of the rice crop for the whole of this area has not exceeded two annas, while in the worst part on the east, including Bela and Parihar, the failure has been complete, less than one anna being harvested. He writes: "In numbers of villages practically no crop has been gathered, and even the small outturn of two annas would not have been reached had not much of the crops of particular villages been saved by irrigation from streams and tanks."

While the Collector was on tour in the area already reported as affected, Mr. Macpherson made a careful inspection of the Sheohur thana, which area was referred to in the last divisional report as the "unascertained area." Mr Macpherson found that, while in some villages the crop had completely failed, in others there was a very fair outturn. The average outturn for the whole Sheohur thana is estimated at 4 annas.

The Collector does not at present wish to include this thana in the affected area, as it has a large area under *rubbee*; and if the outturn of this harvest prove favourable, it will not, in his opinion, need much in the shape of relief. A test work has been opened here, and the tract will be carefully watched. For the present, therefore, I will not ask Government to include the Sheohur thana as an affected area.

I crossed from the Durbhunga district to Mozufferpore close to the Nepal frontier, walking a short cut through Nepal territory. There was hardly any *rubbee*, but curiously most of the *rahar* that I saw was very good. In some villages, where either my tent was pitched or I changed horses, there were crowds of people ready to clamour for help. There were, however, very strong sign that the clamour was prompted by recollection of the extensive relief operations of 1874 At Sursand I met Mr. Bolton, and with him Mr. Disney, the District Engineer. The condition of this part of Sitamarhi is exactly like that of the contiguous parts of Madhubani, and the improvement going south to Pupri is as strongly marked as the opposite change going north from Kamtaul.

General state of the affected tract.

9. The area under *rubbee* on the affected tract is small; and although an attempt has been made to sow a larger area than usual, much cannot be expected from the *rubbee* harvest. Owing to the deficiency of moisture in the soil, and the absence of rain, the crops have not germinated well, and are not making satisfactory progress. The Collector thinks that upon a fall of rain *cheena* and *mung* might be sown. As these crops are largely consumed by the labouring classes, and could be harvested within three months, the Collector will be directed to do whatever may be possible to ensure that there is a sufficient supply of seed available should rain fall.

Grain-stock, and prices of food-grains.

10. The supply of grain in all the local markets is reported to be ample. Exportation of rice from Nepal has been prohibited by the Durbar, but *makai* is being exported. The Collector, in the course of his tour, noticed that rice was being imported into the affected area from the south of the district. I reproduce a statement, from which it will be seen that there has been a rise in prices during the past fortnight—

Price-current, Mozufferpore District.

MARKET.	COMMON RICE.				MARUA.			MAKAI.		
	Fortnight ending 31st December.	Previous fortnight.		Corresponding fortnight of 1887.	Fortnight ending 31st December.	Previous fortnight.	Corresponding fortnight of 1887.	Fortnight ending 31st December	Previous fortnight.	Corresponding fortnight of 1887.
	S.	S.	CH.	S.	S.	S.	S.	S.	S.	S.
Sursand	12	12	0	30	15	17	...	15	18	..
Bela	12½	13½	0	25	16½	22½	40	17½	22½	45
Majorgunge ..	13¾	14	0	27½	....	22½	45	22½	22½	40
Sonbursa	11	13	0	......	19	20	42½	18	23	40

Pucca seers are given.

Prices in the principal markets of the affected area are double or more than double those prevailing at a corresponding period in 1887. These high prices must tell severely on the labouring classes and petty cultivators. Fortunately there exists at present a plentiful supply of the sweet potato which is selling at one pice for five-eighths of a Government seer.

Public works opened.

11. Test works have been opened on four roads, *viz.* Bela road, Pupri Sursand road, Sonbursa road, and Batnaha-Sursand road. The attendance of labourers on these roads was 725 during the week ending the 15th December; 927 during the week ending the 29th December. The expenditure per week on these roads is being met by the District Board. Payment by results is made, and the Collector has satisfied himself that labourers cannot earn more than the full wage. The contract system has been absolutely prohibited. Civil agency works have been started at Kunhowli, Dastea, and Charout, where tanks are being excavated. The two former works are being supervised by the Assistant Superintendent of Police. Payment by result is made, and instructions have issued to give out the work as far as possible by families. Full attendance figures have not been supplied, but on the 30th December there were 1,090 persons working at the Dastea tank and 95 at the Kunhowli tank.

The following works are being carried out by private agency:—A large tank at Bela, four tanks in the neighbourhood of Sonbursa. The attendance on all these works is small and not increasing.

Work was started at Parihur on a tank by the Assistant Manager of the Durbhanga Raj; but as the supervision was inefficient, the influx of people became so great that the Assistant Manager stopped work until his staff was strengthened.

No works are at present being carried out by means of tuccavi loans, but as the Collector has received applications for such loans, a reference for funds under this head may be expected.

Gratuitous relief.

12. No gratuitous relief from Government funds has been given. On the 8th December 1,004 persons received gratuitous relief from the Maharajah of Durbhunga's Parihur office; this number had decreased to 415 on the 22nd December. The Assistant Manager explains the decrease by stating that he gave gratuitous relief until he was in a position to provide employment. The majority of the persons formerly receiving this gratuitous relief will now have to work on the Bela road. The result is decidedly satisfactory, as the distribution of gratuitous relief to able-bodied persons has a demoralising effect.

Establishment.

13. The Collector has not submitted any proposals for increase of establishment. An Assistant Engineer has already reported himself, and the overseers, four in number, have, I understand, also joined. Specific information regarding establishment will be given in my next report.

Circle organisation.

14. No alteration in the scheme of circle organization already reported has been made.

15. *Durbhunga.*—There is no alteration in the area and position of the affected area in this district.

General state of affected tracts.

16. The Collector writes: "The general appearance of the villagers in the north and north-eastern part of the district indicates that the inhabitants are still well above the condition of actual want: herds of bullocks and buffaloes in numbers beyond the requirements of cultivation denote wealth available for the purchase of food supplies, and are a temporary safeguard against any danger of famine. Any pressure that may come will be first felt in pergunnah Bhola, and work will be opened without delay in that tract. The information at hand shows the crop prospects somewhat more favourable during the fortnight under report.

"The *rubbi* crop, it is true, has suffered considerably owing to the absence of rain, but throughout the affected tracts the other winter crops promise a fair harvest. The supply of water along the frontier is not abundant; tanks are needed in many villages for drinking and irrigation purposes."

Mr. Beadon is making enquiries regarding these proposed tanks. I have paid two visits to Durbhunga. In the beginning of December I saw the country about Madhubani and Pandaul, and discussed the state of the crops with several good observers. The crops were good. It was well worth while to see this good rice so close to the boundary of the affected area.

Again on the 14th I went to Durbhunga and rode and drove by Kamtoul, Benipatti, Harlakhi, Umgaun, and Madhuapur, and into the Mozufferpore district. My observation of the look of the country, the number and condition of the threshing-floors, the quality of the corn being threshed, confirmed the previous reports received from Mr. Beadon. From Durbhunga north to Kamtoul there was nothing to complain of. Between Kamtoul and Sauliman Ghât, a distance of about five miles north, there were still no strongly marked signs that anything was wrong. From the ghât north I found a quite different state of things; khalihans much less frequent and less well supplied; large maidans with little or no stubble, and hardly any *rubbi*. The same general features were seen throughout my journey till I reached Narayanpore, about four miles north of Pupri in Sitamarhi. These two places, Sauliman Ghât and Narayanpore, are on or close to the boundaries of affected tracts given by the district officers. As far, then, as observation of the state of affairs, the reports hitherto given may be considered very accurate and improving in accuracy.

I found that test works had not been set going; but there has been so much correspondence on this subject lately, and the wishes of Government have been set forth so clearly, that I will not refer to it again. The usual heavy southward traffic had ceased almost completely, and in its place there was a very much smaller northward transport of grain. Sweet potatoes formed part of the remnant of southward traffic. Cattle showed good condition, but were being driven home unsold from fairs in considerable numbers. Tanks were dry to a very great extent. In the north-west corner of Madhubani poppy was thicker than I have seen it anywhere even in Gya, but there were loud complaints that there was no water. Kutcha wells fell in almost as soon as made from the unfavourable nature of the earth.

Public works open.

17. Mr. Beadon now reports that two test works have been opened, one at Lowkahi and one four miles west of Lowdania. The names given will be found in the map submitted in my last report. Lowkahi and Lowdania are frontier police outposts. No applicants for work had appeared, although the wage given is, in the Collector's opinion, sufficiently high to afford an able-bodied labourer a full ration at present prices. In this opinion I am not prepared to concur, and as it seems to me that the rate of remuneration fixed is, with reference to possible outturn of work and present selling prices, too low to represent the full ration, I am instructing the Inspector of Local Works to visit these test works and ascertain by actual trial whether the rate given is or is not sufficient.

Under existing conditions, no significance can be attached to the attendance on the Durbhunga test works, as it appears that during the fortnight ending the 31st December work was being carried on or near the affected tracts simultaneously by (1) District Boards under the contract system; (2) by the Sub-divisional Local Board; (3) by private agency; (4) persons who had taken advances under the Land Improvement Act.

Mr. Beadon has stated that the contract system will be absolutely abandoned, and before long I hope that much of the work now being carried on will be executed under the conditions prescribed in the Famine Code.

Much work is being executed through private agency, principally by the Maharajah of Durbhunga and Rajah Rameswar Singh.

Gratuitous relief.

18. None has been given.

Grain stocks, and selling prices of food-grains.

19. The Collector has made careful enquiries regarding grain stocks, and has ascertained that grain is being imported into the affected tracts from Madharpore, Bahera, and Rusera on the south-east. The stretch of land lying immediately to the north of Durbhunga, which ordinarily supplies the Durbhunga market, has fine crops this year, and is exporting direct to the north. The Durbhunga merchants have expressed their willingness to export to any part of the district where prices are high, if Government builds sheds to serve them as temporary shops; while two of them, Mohesh Chandra and Ram Lal Sahu, have expressed their intention of opening

golahs in the affected tracts very soon. All the information received gives reassuring indications that private trade is active and sufficient for all requirements. The price-current of the 31st December showed the price of common rice at Durbhunga as 14 $\frac{1}{16}$ seers, Madhubani 14 seers, Tajpore 14 $\frac{3}{16}$ seers During the fortnight there has been a slight tightening of prices due probably to exceptional causes which will not continue to exist

Circle organisation.

20. In accordance with instructions conveyed to him, the Collector has now established four circles. The existing staff of the sub-division has been utilized on the duties connected with these circles, which have been so constituted as to be capable of being sub divided into smaller circles directly any officer reports the necessity for more detailed work in his neighbourhood. The instructions issued to the circle officers are sufficient, and we may now feel satisfied that early and reliable information as to the condition of the people will now reach the Collector from all parts of the affected area. For purposes of reference, I may note that the circles have been constituted according to police jurisdiction. The following names will be found on the map already submitted:—

Circle (1).—Beniputty thana, Madhwapur outpost.
Circle (2).—Harlaki outpost.
Deodha outpost.
Circle (3).—Khajowli thana, Ladounia outpost.
Circle (4).—Lowkaha outpost.
Lowkahi outpost.

Establishment.

21. No application for increase of establishment has been received. When I was in Calcutta, I arranged with the Secretary to Government in the Public Works Department regarding an Assistant Engineer and some upper subordinates for this district, but as yet I have not learnt whether the officers selected have joined. When the District Engineer's establishment has been strengthened, I hope that a large number of the works in progress will be carried out under the Famine Code tests.

Area affected.

22. *Chumparun.*—No alteration is reported in the area affected

General state of the affected area.

23. The Collector states that distress is being felt by poorer cultivators, numbers of whom are resorting to the test works, and applications for loans are being made by them in hundreds. The prospects of the standing crops continue unchanged: where irrigated, the *rubbee* and poppy promise well. Elsewhere these crops are suffering slightly from the continued drought

The attendance on the test works was on the 31st December 11,316 persons, viz., 4,793 men, 2,431 women and 4,092 children The Collector in a demi official letter, dated 2nd January 1889, reports that the payment by results system has been practically introduced on all the test works. When the District Engineer receives the increase of establishment arranged for during my visit to Calcutta, more perfect arrangements for securing a full day's work for each person will be made.

Grain stocks, and selling prices of food-grains.

24. Mr. Power writes: "Hitherto there has been no deficiency of grain supyly, but apparently the stocks from which the local markets are supplied are being depleted, for prices have risen. Coarse rice is now selling at 12$\frac{3}{16}$ to 14$\frac{9}{16}$, and *makai* (Indian-corn) at 18¼ to 19$\frac{7}{16}$ Government seers per rupee.

25. The important points I have to bring to notice in this report are—

1st.—That the skeleton circle organization has been carried out in the Durbhunga district

2nd.—That in the Mozufferpore and Chumparum districts, the payment by results system has been introduced on all works.

3rd.—That two test works have for the first time been opened in the Durbhunga district under conditions however which do not seem to me to be suitable. I am in correspondence with the Collector on the subject, and hope that his District Board will furnish a number of these works to be carried out under the Code system. I have deputed the Inspector of Local Works to Madhubani with instructions to visit works in progress and to report to me upon the rates paid and the amount of work which is exacted, and generally upon all matters which have a bearing upon the usefulness of these works as affording indication of the pressure on the people and as supplying employment to persons in need of it.

26. I give no financial statement in this report, as, owing to the break caused by the Christmas holidays, the district reports are not sufficiently full to enable me to give precise information. All districts have sufficient funds for immediate requirements

27. No rain has fallen throughout the division during the fortnight under report. There has been no marked tightening of prices, except in the Madhubani sub-division, and these may be attributed to special and temporary causes A tendency to a rise in prices is noticeable, however, in Chumparun and Durbhunga.

No. 84GF, dated Bankipore, the 24th January 1889.

From—JOHN BOXWELL, ESQ., Offg. Commissioner of the Patna Division,

To—The Secretary to the Government of Bengal, Revenue Department.

I HAVE the honour to submit my report upon the prospects of the crops and condition of the people in the districts of the Patna Division for the fortnight ending the 15th January.

This report has been written very hurriedly on my return to head-quarters, and I must apologise for the clerical mistakes that may be found in it.

SHAHABAD—PATNA—SARUN.

2. The Collector of Shahabad writes :—

"The prospects of the standing crops continue on the whole fair, though rain is badly wanted to prevent them from suffering. There was slight rain on the 13th, but the fall was not general and not enough to do any good to the crops. The prices of food-grains are stationary. Coarse rice is selling at 15 seers, barley at 18 seers and *makai* at 19 seers the rupee."

3. The Collector of Sarun writes :—

"The *rubbi* and poppy crops have much benefited by the showers which fell on the 13th instant, and their prospects are excellent.

"The prices of food-grains obtaining in the market on the 15th instant were—

"Common rice (old)	...	...	12 seers 13 chittacks.
Ditto (new)	...	...	14½ to 15 seers.
"Makai	...	...	19½ "
"Rahar	...	...	21 "
"Marua	...	...	20 "
"Barley	...	...	21 "

The stocks in hand are reported to be as full as ever ; there is no reason for apprehension.

4. The Collector of Patna writes :—

"The prospects of the standing crops are favourable. The Sub-divisional Officer, Barh, reports that there was a good deal of hail in his sub-division, which may possibly have injured the young poppy plants, but the extent of damage has not been ascertained."

The fluctuations apparent in the selling prices of food-grains are unimportant.

Coarse rice is selling at 15½ seers the rupee, *makai* at 20½, barley at 20½ at head-quarters : slightly lesser quantities are given for Barh.

CHUMPARUN.

5. *Area affected.*—There is no change in the affected area.

6. *General state of the affected tract.*—The Collector writes :—

"Distress is spreading among the poorer classes of the cultivators, but not yet in an acute form ; numbers of them resort to the relief works, but complain that not being accustomed to manual labour of the kind required, they find it difficult to earn a full ration at piece-work. Arrangements have been made whereby, with ordinary diligence, they can earn fully 75 per cent. of the full wage as prescribed in section 131 of the Famine Code. The effect of the change from payment of daily wages to piece-work has been to reduce the numbers of persons, especially of women and children, and to increase the numbers of applications for loans and advances. Prospects of crops continue unchanged ; there were a few drops of rain on the 13th, and the weather has been cloudy off and on since. Poppy is holding on satisfactorily ; numerous kutcha wells are being excavated to irrigate the crop. The water-channels from the dams on the three rivers north of the affected tract have done immense good to the *rubbi.* Elsewhere this crop is beginning to look somewhat yellow."

7. *Public works open.*—I annex three statements A, C, and D, which show the attendance on works carried out at the expense of the District Board, of Government, and of private individuals. All these works are under the District Engineer. It will be seen that, while the system of payment by results is being introduced as largely as possible, due provision has been made for the requirements of the more weakly and less efficient labourers by supplying task work. The Collector's action in this respect has my fullest approval.

8. *Grain-stocks and prices of food-grains.*—The supply of grain is reported to be sufficient. Mr. Power writes :—

"There is a tendency towards equalization of prices all over the district. Coarse rice is still procurable at a fraction above 12 seers per rupee in the affected area and cheaper food-grains (*makai,* &c.) in proportion."

9. *Gratuitous relief.*—No gratuitous relief has as yet been given. The Collector reports that a commencement has been made in the preparation of Register A under section 11 of the Famine Code in an unostentatious manner.

10. *Establishment and circle organization.*—The Collector requires two additional canoongoes, and arrangements have been made to send them to him at once.

No alteration in the circle organization is reported.

GYA.

11. *Area affected.*—There is no change in the area affected.

12. *General state of the affected tract.*—The prospects of the *rubbi* continue favourable. Mr. Grierson writes:—

"There has been no rainfall during the fortnight. At Fatehpore, where I have been in camp, there has been some rain for a few miles all round, which has done great good. If there be a good shower of rain followed soon by clear weather, the prospects of the *rubbi* will be further improved"

13. *Public works open.*—The ordinary annual repairs of village roads are in progress under the Local Boards.

No report of attendance figures on the test works in the affected tract of Nawada, which have been lately re-opened, has been received.

On the test works opened in mehal Sarawan for the construction of gendabandi, the average daily attendance of labourers is 180. Mr. Grierson writes:—

"I would also draw your attention to my proposal that the earthwork on the new railway to Benares, when it passes through the south of the district, should be commenced not as a relief work, but as a good thing likely to save the necessity of relief works at a later stage when much pinching will be felt by the poorer classes."

I commend Mr. Grierson's proposal to the consideration of Government.

14. *Grain-stocks and prices of food-grains.*—The supply of grain is reported to be sufficient everywhere in the district. Common rice is selling at 15½ seers the rupee in Gya, 16 to 17 seers at sub-divisional head-quarters, and at 21 seers at Govindpore, an outpost of the Nawada sub-division.

15. *Gratuitous relief.*—No gratuitous relief has been given.

16. *Establishment and circle organization.*—Mr. Grierson needs the assistance of another Deputy Magistrate, but this will be dealt with in a separate communication.

No change in circle organization.

MOZUFFERPORE.

17. *Area affected.*—The area affected remains unchanged. The Collector writes:—

"I am not yet satisfied that it should be extended so as to embrace the southern portion of the Shewhur thana. I have already explained that the *rubbi* cultivation in that part is fairly large, and a good *rubbi* outturn may considerably improve the state of things. One of the recently-appointed canoongoes has been deputed to Shewhur. His reports give a somewhat gloomy account of the tract, but the Sub-divisional Officer is not disposed to attach much importance to them, and I am myself of opinion that they are much exaggerated. Mr. Maude will shortly visit Shewhur, and I shall also go there after a brief stay at Mozufferpore. For the present, work is provided near Shewhur, and this will suffice for the labouring classes, who are the only persons in need of assistance."

18. *General state of the affected tract.*—There has been no improvement in the state of the crops in the affected tract. The Collector writes:—

"The absence of rain has done much harm. Signs of rain have been frequent during the past week, but beyond a few drops on the 13th and the early morning of the 19th there has been no fall. In Mozufferpore and further south fairly good rain has fallen, and the *rubbi* must have much benefited. There is now every reason to hope that a very good *rubbi* harvest will be gathered in these parts of the district, and that will to some extent benefit the distressed tract by causing a fall in the prices of *rubbi* food-grains, although infinitely greater good would have been done by a fall of rain in the tract itself, sufficient to enable cultivators to sow *cheena* and *mung*. It has already been reported that *rubbi* cultivation is very slight in the affected tract, *rahar* being the principal crop now seen. The crops generally appear stunted and unhealthy (except *rahar*), and unless rain falls shortly the outturn is likely to be very small. The people are using such water as there is in the hill streams for irrigation of the *rubbi* within a few hundred yards of the banks."

The people are reported to be in fairly good health, and the cattle to be in good condition everywhere.

19. *Grain-stocks and prices of food-grains.*—It is satisfactory to note that there has been a slight fall in prices during the fortnight. Exact figures cannot be given, as the Collector had not the returns for the several markets by him when writing; but he is able to report that there is an improvement of about one seer in the selling price of rice and of about two seers in *marua* and *makai*. The Collector reports that the supply of grain is sufficient in all the markets, and that *makai* continues to be imported from Nepal and rice from the south, although the quantity is not large in either case. It would appear from the fall in prices that a large supply of these grains came into the market during the fortnight.

20. *Public works opened.*—The average daily number of persons employed on road work carried out at the expense of the District Board is shown in the following statement:—

	Week ending 29th December.	Week ending 12th January.
Bela road ...	291	218
Pupri-Sursund ...	124	1,356
Sonbursa ...	113	543
Batnaha Sursund ...	399	1,089
Parihar-Sursund ...	......	239
Shewhur ...	......	655
Total ...	927	4,100

The above figures show a large increase for the whole period. The Collector reports that there has been a further increase on the 12th and on the 15th instant: he estimates the number of persons on the District Board's works in the affected tract at 5,000. Details of the number of men, women, and children on each road will be given in the next report.

The civil agency works consist of three tanks, Konhowli, Dostia, and Hanmannager. The total number of persons working on these tanks was 1,902, of whom 899 were men, 718 women, and 285 children. The total numbers of persons on works in the affected tract of the Mozufferpore district on the 15th instant may therefore be put down roughly at 7,000. The Collector reports that women and children resort more freely to tank works than to the roads. On the former the work is allotted to families. Mr. Bolton writes that this arrangement will be tried on the roads.

It appears that upon one tank the rate at first given was too high; when this rate was reduced, the number decreased, and labourers were able to stay away because the Sursund zemindar started some work in the neighbourhood, paying daily wages without regard to the quantity of work done. Piece-work has, however, since been introduced on these private works, and the people have again commenced to flock to the civil agency tank.

Mr. Bolton proposes extending tank work throughout the affected area. He writes:—

"I have refrained from undertaking it more extensively hitherto because the entire cost is borne by Provincial funds, while I am of opinion that the zemindars who derive the chief gain from works of this class should contribute a portion of the cost. I propose in future to offer to re-excavate tanks provided the zemindars bear half the cost."

The Collector is prepared to make advances to them for the purpose under the Land Improvement Act, and has intimated his intentions to the zemindars of the affected tract.

The Maharajah of Durbhunga and other zeminders are excavating tanks at their own cost. Figures of the attendance on these private agency works are not available.

21. *Gratuitous relief.*—The only gratuitous relief given is that needed in urgent cases. Mr. Bolton writes:—

"There is still no necessity for organizing charitable relief, but I shall shortly select the villages which will serve as the centres for such relief, if it must be undertaken hereafter. At Parihar, the Maharajah of Durbhunga is reported to be still giving gratuitous relief to several hundred people, a number of whom are, the Collector considers, not proper objects of charitable relief. The Raj Manager has given orders for the exclusion of able-bodied persons; so a diminution in the number of recipients may be expected. At Sursund a zemindar and near there three mohunts are also giving charitable relief on a limited scale."

22. *Establishment.*—The Collector considers that the time has now come for some increase of establishment. Details will be given when the proposition statement is received. The Collector is having a list prepared of old tanks which could be usefully re-excavated, and will also select the most suitable centres for the distribution of gratuitous relief, should it be necessary later on to afford relief in this form. His arrangements have been carefully considered, and the action he is taking, while it will not in any way excite public feeling or raise false hopes, is required to ensure that the best possible preparation shall be made against a possible time of greater pressure later on in the season.

23. *Circle organization.*—No alteration in the scheme of circle organization is reported.

24. *Grain-stocks and prices of food-grains.*—The Collector writes—

"Stocks are not showing signs of depletion, except in so far as a very slow and slight rise in price is concerned, but this only in certain places. The Deputy Collector charged with the duty reports that several mahajans have sent orders for rice from Burdwan, Ranigunge and other districts in Bengal. The Sub-divisional Officer reports that there is a tendency to rise in prices, but that nowhere has this rise been marked. Mr. Greer writes from the south-east of Madhubani and the Durbhunga Sudder sub-division, large quantities of grain are being carried across the frontier to Nepal where there is also scarcity. The export of food-grains from railway this year shows a marked falling off as compared with the corresponding period of previous years. On the other hand, there is a marked decrease in the amount of imports from Nepal. So far as available, information can guide us to an opinion, there seems to be little doubt that up to the present private trade is sufficiently active and extensive to maintain the stocks of grain in the local markets up to the actual requirements.

25. *Gratuitous relief*—Has been given to some twelve persons only. The Collector fully realizes the necessity of not giving relief in this form until the circumstances of the persons who, on account of infirmity or disease, are fit recipients, are such as to render the administration of relief in this form absolutely necessary.

DURBHUNGA.

26. *Area affected. General state of the affected area.*—The area affected remains unchanged. The Collector has had detailed estimates, village by village, for the Madhubani sub-division, made of the outturn of the *dhan* harvest, and of the probable outturn of the *rubbi* harvests. These statements I reproduce on a separate sheet.

It will be seen that the whole jurisdiction of the Madhubani Sudder thana has harvested considerably above an 8-anna crop: regarding this area therefore there need be no apprehension. In the remaining three thanas of Benipatti, Khajouli, and Phulparas, representing an aggregate of 598 villages,* it will be seen that on 37·75 per cent. of these villages, or on about 240 villages, the failure of the *dhan* has been almost complete, 2 annas or less having been harvested, while in 18·44 per cent., or on about 110 villages more, there was a 4-anna crop only of *dhan* harvested. The significance of these figures is obvious. The Lieutenant-Governor, who has lately visited a portion of these Durbhunga affected tracts, has satisfied himself that the condition of the people there is better than in the affected tracts of the neighbouring districts, Mozufferpore and Chumparan, and there are many indications to support this view. Whether this relative superiority will be maintained, it is not so easy to determine. My own opinion is that, if failure of the *dhan* harvest is correctly shown in this figured statement, and I have every reason to believe that the information was carefully collected and examined, the condition of the people in the 240 villages of the Madhubani sub-division, in which the *dhan* crop almost completely failed, must sooner or later conform to the condition of the people in the affected tracts of the neighbouring districts. A considerable proportion of the agricultural population (and in agricultural I include all the non-urban population) possess little or no reserve, and if their *dhan* fields this year yielded them an outturn of two annas or less, such stocks as they possess will very soon be exhausted, and assistance in some form or other will have to be given to them. As already stated, there are no indications that at present the pressure upon the people of these villages is severe, but that it will become so before long appears incontestable if the Collector's estimate is correct. The local officers will continue to make fullest enquiries and to watch the attendance figures upon the works that have been opened, and we may hope therefore to receive timely warning of the necessity, should such necessity arise, of affording employment on a more extensive scale to the population and of giving special relief to the infirm and aged in exceptional cases. The Famine Commissioners have estimated that in the worst famine not more than 15 per cent. of the population seek relief. Taking the population of the 240 villages in which there has been an almost complete failure of the rice crop at 275,000 persons (and it is not less) the largest possible number that would come on to our works in the affected tracts of the Durbhunga district would at no time exceed 40,000 persons; and I have no doubt whatever that the local officers would be able to deal with this number, as the District Engineer's staff has been strengthened, and the present skeleton circle organization is capable of considerable expansion.

* With a population according to the last census of 695·733.

We must also not lose sight of the extra strain that may be put upon our organization by the influx in large numbers of residents of the Nepal Terai. The Sub-divisional Officer, Madhubani, reports that the scarcity in the Terai resembles the condition of our worst tracts, and if his information is correct we may expect Nepalese ryots to flock to our works in large numbers later on, and if their condition is one of severe distress, it will be our duty to allow them to secure employment on our works, provided that these works are being carried out in strict accordance with the rules laid down in the Famine Code.

27. *Public works open.*—In my report for the fortnight ending the 31st December, I stated that the contract system had been prohibited on all works carried out by the District Board. This statement was made in error. Work is carried out by the District Board on a modified contract system. The restrictions imposed are that contractors must accept all labour which offers itself, and must pay for it at the rate of Rs. 1-4-0 per hundred cubic feet. The circumstances under which the Lieutenant-Governor has agreed to the present system being tentatively maintained were fully discussed on the conference held at Durbhunga.

The following works are now being carried out by the District Board:—

1.	Phulparus-Gongaria	road repairs.	7.	Barhi	road repairs.
2.	Kumtant-Pupri.	„	8.	Benepati-Harlaki	„
3.	Raika-Jainagar	„	9.	Mirzapore-Jainagar	„
4.	Mirzapore-Burha.	„	10.	Benipati-Bulwa	„
5.	Khajouli-Madhubani.	„	11.	Balwa-Madhwapore	„
6.	Khajouli-Lodania	„	12.	Umgaon-Cherawt	„

This information relates to the fortnight ending the 5th January. Exact figures of attendance are not available; but estimating numbers according to the mayments made, the Sub-divisional Officer states that the attendance was 3,246 men in the first and 4,733 men in the second week. No women or children appear in the statements, but from Mr. Greer's personal observation it would appear that women and children are also working. Payments are made according to the work done independently of the sex or age of the labourers. It

will be seen that the labour on the roads is distributed throughout the four circles into which the affected area has been subdivided, being most extensive in the worst affected tracts.

The following roads are under repair by the Madhubani Local Board :—

1. Mirzapore-Motipore.
2. Janjharpore-Modheypur.
3. Mirzapore-Belwa.
4. Kewna-Johara.

Attendance figures on these works are not available.

The two test works at Lodania and Lowkaha are still open. The attendance on them is small.

The District Engineer has arranged to take them over.

The Sub-divisional Officer is engaged on making a list of tanks upon which work can be commenced hereafter should necessity arise.

Several works have been undertaken by private individuals at their own expense within the sub-division at Salempore within the Madhwapore outpost jurisdiction: two tanks are being excavated by Buchoo Soonri and Halman; they are estimated to cost Rs. 450 and Rs. 400 respectively. In Palhnarguan two tanks are being excavated by Jamah Rast and Boloram Kandoo, and a third tank is being excavated by , employing 100 labourers on it.

In the Buchour neighbourhood tanks are being excavated at Rajuyar (350 labourers employed), Thabur (80), Sedhef Kulan (100), Bochoura (80), Paduma (100), Koomar Khal (100), Patharyarha (160).

The Rajah of Buchour is reported to be giving employment to a large number of labourers on a tank at Narar, and will provide further works to relieve distress in his estate.

At Lurkaha tanks are being excavated by Koonja Lall Saho at Luchminore at an estimated cost of Rs. 1,000; at Bahuputty a tank estimated to cost Rs. 1,000 is being excavated by Girdhary Beldar; at Karmegh a tank to cost Rs. 500 by Hulman; at Habaha a tank to cost Rs. 700 by Bhoka Oja, at Kotpore Sah a tank to cost Rs. 600 by Mondar, and also tanks at Lukeh Taht at Madonpore and jote Tarsahi.

At Phulparas two tanks are being excavated, one by Chede at an estimated cost of Rs. 600, and one at Lugapoti by Khub Lall at an estimated cost of Rs. 700.

Details of the attendance upon these tanks are not available, but the above information affords evidence of the extent of the private relief agency and of the means of employment offered to the inhabitants. Making a rough estimate of numbers, it may be said that in the Madhubani sub-division not less than from 6,000 to 7,000 persons are obtaining employment.

28. *Establishment and circle organization.*—The question of increase of establishment will be separately dealt with. It is absolutely necessary with the Durbhunga system of employing labourers on the modified contract system to have a very efficient circle organization. Circle officers will have to go their rounds frequently and systematically to satisfy themselves that all persons in need of employment are able to get it. They will also have to satisfy themselves that payments are made punctually at short intervals, and that each individual labourer is able to earn a wage sufficient to purchase a day's food. At present payment is made according to the amount of work measured up, and the distribution of wages to individuals is not made. Very strict supervision consequently will be required to ensure that the weakest and least efficient member of the gang gets sufficient for the day's food. This is the more necessary, as under the Durbhunga system the principle of providing task work for the more feeble workers has not been brought into operation.

No change has been made in the scheme of circle organization, but the Collector does not think that officers of the status of canoongoe can be entrusted with the responsible duties of circle officers. This is a point which will be dealt with when the question of establishment is being discussed.

29. *Prices of foods-grains and stocks.*—A price current statement is annexed. The Sub-divisional Officer writes:—

"Throughout the sub-division there is a tendency to a rise in prices, but nowhere has there been an increase of serious consequence. Grain is being extensively imported from the south-east of Madhubani and the Durbhunga Sudder sub-division."

30. *Financial statement.*—I will submit shortly an application for allotment of funds under the various heads of expenditure. In the meantime I have authorized Collectors to incur expenditure in anticipation of sanction. When submitting this application I hope to be able to discuss the question of the suitability of making advances under the Agriculturists' Loans Act as a form of relief. I may here state that on the whole district officers are against making these loans at present. Some light will be thrown upon the question by an examination of the figures showing the percentages of recovery made in the several districts of amounts so lent during the famine of 1873-74.

31. The important points I have to bring to notice in this report are—

1st.—That detailed enquiries made village by village in the Madhubani sub-division confirm the opinion already expressed by the Collector as to the extent of almost complete failure of the *dhan* harvest in certain tracts of that sub-division.

2nd.—That public works in the affected tracts of the Madhubani sub-division are being carried out on a modified contract system, no provision being made to give weakly or unskilful coolies employment under any system approximating to task work.

3rd.—That in Chumparun, as will be seen from the figured statements attached, the payment by result system has been widely introduced, and that side by side with it the system of payment by task work is also in force.

4th.—Figured statements for Mozufferpore are not available, but there also the system of payment by results has been widely introduced. The Collector will be asked to submit statements which will show whether the task work system is in force.

5th.—In my opinion the provision of employment under the task work system is an integral part of the scheme for relief, is formulated in the Famine Code and should be insisted upon, due discretion being exercised in drafting the able-bodied to the payment by results works. An expression of the views of Government upon this point is solicited.

6th.—There is a marked steady increase in the number of persons on the works in Mozufferpore. Attendance figures, which fell very rapidly upon the introduction of the payment by results system in Chumparun, are again going up rapidly. In Durbhunga there would appear to be also a steady increase in the number of persons on the works.

7th.—A strong expensive agency will be required in connection with the modified contract system upon works in the Durbhunga district.

8th.—Grain-stocks everywhere are reported to be sufficient. Prices of food-grains are fairly stationary. The late rain does not appear to have done any benefit to the *rubbi* crop in the affected areas, though it has much benefited the *rubbi* elsewhere in places.

9th.—No increase of crime of importance is reported. Up to the present the measures of relief taken have been sufficient for the protection of the population of the affected tracts, and the arrangements made are capable of expansion should the number of persons seeking relief rapidly increase.

DURBHUNGA DISTRICT.

REGISTRATION OF VITAL STATISTICS OF EUROPEANS AND EAST INDIANS.

MUNICIPAL DEPARTMENT—SANITATION.

Calcutta, the 9th February, 1889.

RESOLUTION.

READ—

Resolution of this Government, No 1, dated 15th September 1869.

Letter No. 4929, dated 23rd July 1888, from the Sanitary Commissioner for Bengal.

In the Resolution of this Government, dated 15th September 1869, a set of rules, prescribing the forms in which the mortuary statistics relating to natives of this country, of all classes and creeds, were to be embodied, and the procedure to be adopted by the officers upon whom the duty of preparing the returns would fall, was circulated to the Commissioners of Divisions for communication to the officers concerned. It was stated that the mortuary statistics of Europeans and East Indians would not be included in these forms, but that a separate set would subsequently be issued for this purpose. The mortuary statistics of Europeans and East Indians are now prepared under the rules issued with Government Resolution, dated 4th October 1872, for the submission of quarterly returns of baptisms, marriages, and burials of European Christians. The Sanitary Commissioner, in his letter No. 4929, dated 23rd July 1888, has now pointed out that, in consequence of this arrangement, the mortuary statistics of Europeans and East Indians are not included in the weekly and monthly returns which are submitted to him by municipalities, and that the mortuary statistics of the Province, which are compiled from these returns, are consequently inaccurate. The Sanitary Commissioner now proposes that municipalities should be empowered to record all births and deaths occurring within municipal limits irrespective of nationality or religion, and that all deaths in hospitals, dispensaries, lunatic asylums, and jails should be reported to the Municipal Commissioners. Under Act IV (B.C.) of 1873, the necessary power to carry out these proposals has already been extended to all municipalities in which that Act is in force, but it appears that the Municipal Committees have hitherto continued to follow the rules laid down in the Resolution of 1869.

The Lieutenant-Governor approves of the proposals of the Sanitary Commissioner, and is pleased to direct that the Commissioners of all municipalities, to which Act IV (B.C.) of 1873 has been extended, shall in future record all births and deaths, and that registrars of vital statistics in rural areas shall record all deaths, occurring within their jurisdictions irrespectively of nationality and religion Sir Steuart Bayley also directs that all deaths in hospitals, dispensaries, lunatic asylums, and jails, situated within the limits of municipalities, be reported to the Municipal Commissioners. A column should be added to each of the Forms A to F to show the births and deaths of Europeans and East Indians.

ORDER.—Ordered that a copy of the Resolution be forwarded to the Sanitary Commissioner, the Inspector-General of Civil Hospitals, Inspector-General of Jails, Inspector-General of Police, and Inspector-General of Registration and Registrar-General of Births, Deaths, and Marriages, for information, and to all Commissioners of Divisions for information and communication to municipalities situated within their jurisdiction, and to the General Department for information and such action as may be deemed necessary.

Ordered also that the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

H. J. S COTTON,

Offg. Secy. to the Govt of Bengal.

PUBLIC WORKS DEPARTMENT.

The 12th February 1889.—The following letter is published for general information.

By order of the Lieutenant-Governor of Bengal,

W. B. BESTIC,
Under-Secy. to the Govt. of Bengal,
P. W. Dept.

FEEDER ROAD FROM HARIPAL TO BUNDERHATTY.

No. 451C, dated Calcutta, the 12th February 1889.

From—W. B. Bestic, Esq., Under-Secy. to the Govt. of Bengal, P. W. Dept.,
To—The Commissioner of the Burdwan Division.

I am directed to acknowledge the receipt of your letter No. 51T—L. W., dated the 29th ultimo, reporting that Babu Nresingha Churn Auddy has contributed the sum of Rs. 15,000 towards the cost of a feeder road from the Haripal station of the Tarkessur Railway to Bunderhatty.

2. In reply, I am to request that you will be so good as to convey to Babu Nresingha Churn Auddy the thanks of the Lieutenant-Governor for his liberality in subscribing to this work, which will be of great benefit to all residents of the surrounding neighbourhood.

3. This letter will be published in the Supplement to the *Calcutta Gazette* for general information.

	Howrah „ 11, '89	Nil	Weather—seasonable. *Amun* crop harvested. Prospects fair.
	Central Districts.		
6	24-Perghs. Feb. 12, '89	Nil	Weather—seasonable. Prospects of *rubbi* crops fair. Tillage going on. Manufacture of sugar progressing.
PRESIDENCY DIVN.			
7	Nuddea „ 9, '89	Nil	Weather—cool and seasonable with heavy fog on one day. Prospects of *rubbi* crops fair on the whole, but less favourable in Kooshtea than elsewhere. Some damage was done to the crops in Ranaghat by hail in the previous week. Cutting of sugarcane in progress.
8	Khoolna „ 9, '89	Nil	Weather—cool. *Amun* crop harvested. Cold-season crops doing well.
9	Jessore „ 9, '89	Nil	Weather—seasonable. *Rubbi* crops are being harvested with fair outturn.
	Narail ...	0·09	
10	Moorshedabad „ 9, '89	Nil	Weather—bright and cold. *Rubbi* crops promise well. Harvesting of *haimanti* rice nearly completed.
RAJSHAHYE DIVN.			
11	Dinagepur „ 9, '89	Nil	Weather—getting warm. Lands are being prepared for *bhadoi* rice and jute. Prospects of *rubbi* still reported fair, though some damage was done by the late hail-storm in the southern thanahs. Price of rice continues stationary.
12	Rajshahye „ 9, '89	Nil	Weather—a little warmer, but seasonable. Condition of spring crops fair. The average price of rice is 16½ seers per rupee. Ploughing for rice and jute going on. About 4 annas of ganja crop in the Nowgong sub-division damaged by rain and hail-storm.
13	Rungpur „ 9, '89	Nil	Weather—seasonable. The late rain has materially benefitted the standing crops. Land is being prepared for *aus* and jute.
14	Bogra „ 9, '89	Nil	Weather—fine and cool. Damage to some of the *rubbi* crops has been done by hail, but others have been improved by the rain of the previous week. Potato is a fair crop. Sugarcane is being cut. Price of rice steady.
15	Pubna „ 9, '89	Nil	Weather—seasonable. Prospects of *rubbi* crops improved. Outturn of sugarcane fair.
16	Darjeeling „ 9, '89	Nil	Weather—bright and cold. Crop reports generally favourable.
17	Julpigoree „ 9, '89	Nil	Weather—nights and mornings cool; days rather warm for the season. Reaping of *haimanti* rice finished. The outturn in the sub-division of Alipore is estimated at 8 annas, but the average outturn for the district may be placed at 10 annas. Tobacco and other cold-weather crops are doing well.
	Eastern Districts.		
DACCA DIVN.			
18	Dacca Feb. 9, '89	Nil	Weather—cold and mostly fine. Mustard and pulses are being gathered. Cutting of sugarcane continues. Ploughing has commenced. Prospects good.
	Manickgunge ..	1·26	
	Munshigunge ...	0·11	
19	Furreedpur „ 9, '89	Nil	Weather—seasonable. Prospects of *rubbi* crops fair.
20	Backergunge „ 7, '89	0·64	Weather—seasonable. Prospects of crops fair. Harvesting of *amun* crop completed; outturn reported to be 12 annas.
21	Mymensingh „ 8, '89	0·11	Weather—very cold. Prospects of crops good.
	Jamalpur ...	1·58	
	Netrokona ...	0·17	
CHITTAGONG DIVN.			
22	Chittagong „ 12, '89	Nil	Weather—seasonable. Winter crops thriving. Rain wanted. Prices of paddy and rice rising.
23	Noakholly „ 8, '89	1·08	Weather—seasonable. *Rubbi* crops getting on well. Late rain has done much good to them.
	Fenny ...	1·10	
24	Tipperah „ 7, '89	0·13	Weather—seasonable. Prospects of the winter crops, which have been much improved by the recent rain, are fair.
	Brahmanberiah ...	0·91	
	Chandpur ...	1·28	
25	Chittagong Hill Tracts. „ 5, '89	0·57	Weather—chilly with foggy mornings. The gathering of mustard has commenced in some places. Tobacco, chillies and other winter crops thriving well. A fall of rain on the 1st has greatly improved the condition of the winter crops.
	Hill Tipperah „ 6, '89	0·52	Weather—cold. Tobacco and chillies doing well. In the hills, *jums* are being cut.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.			
PATNA DIVN.			
26	Patna Feb. 9, '89 Dinapur ... Barh ...	Nil 0·77 0·37	Weather—cold. Prospects of *rubbi* continue favourable. Harvesting of early mustard commenced In the Barh sub-division the late rain has done slight damage to gram and *mussoor*. Prices stationary.
27	Gya „ 9, '89	Nil	Weather—fair and seasonable. Harvesting of paddy almost finished. *Rubbi* crops coming on well. Poppy is progressing.
28	Shahabad „ 9, '89	Nil	Weather—much warmer, but fair. *Rubbi* crops doing well. Peas and *masuri* are being harvested, and wheat and barley are in ear. Poppy promises well and does not seem to have been damaged by last week's rain. Prices stationary.
29	Durbhunga „ 9, '89	Nil	Weather—bright. Last week's rain has considerably benefitted *rubbi* and indigo. It has, however, done injury to *rahar* and tobacco in places where hail has fallen. Lands are being prepared for *mung, cheena* and paddy sowings. Prices of common rice ranging from 14 to 19 seers per rupee.
30	Mozufferpur „ 9, '89	Nil	Weather—clear and dry; getting warmer Reports from all parts of the district show that the late heavy rain has done much good. Prospects of the *rubbi* harvest are excellent. *Cheena, mung* and sweet potatoes, which are largely consumed by the poorer classes, are being cultivated in North Sitamurhi and elsewhere. No material change as yet in prices.
31	Sarun „ 9, '89 Sewan ...	Nil 0·63	Weather—fair with strong west wind. Cloudy in the beginning of the week. Prospects of *rubbi* crops continue excellent. Poppy is also doing well. Lands are being prepared for indigo and sugarcane.
32	Chumparun „ 9, '89	Nil	Weather—fair; getting warm gradually. *Rubbi* and poppy doing well. The rainfall of last week has facilitated sowing of *cheena*, which is grown over a large area in this district. Prices almost stationary.
BHAGULPORE DIVN.			
33	Monghyr „ 9, '89	Nil	Weather—seasonable and fine. *Rubbi* crops are doing well. Prospects good.
34	Bhagulpur „ 9, '89	Nil	Weather—seasonable. Harvesting of mustard nearly over. Lands are being prepared, and *cheena* is being sown. Prospects of the *rubbi* crops continue fair, but the recent hail is reported to have injured wheat in the Sudder sub-division. Harvest of peas and gram has commenced.
35	Purneah „ 9, '89	Nil	Weather—clear and seasonably cold. The late rain is said to have done much good to the *rubbi* crops.
36	Maldah „ 9, '89	Nil	Weather—fair and cool. Serious damage is reported to have been caused by hail-stones to the *rubbi* crops in thanah Kharba, where the yield is expected to be not more than 6 annas on the whole. In other thanahs, viz., Shibgunge, Nawabgunge and Ratua, rain has improved the prospects. *Boro* paddy is being transplanted.
	Sonthal Perghs. „ 9, '89 Deoghur ...	Nil 0·08	Weather—clear and cold. *Rubbi* prospects fair. Sugarcane pressing has begun. Prices stationary, but higher than usual.
ORISSA.			
ORISSA DIVN.			
38	Cuttack Feb. 8, '89	Nil	Weather—seasonable. *Sarad* is being threshed. *Rubbi* crops are being gathered. *Dalua* rice doing well. Prices stationary.
39	Pooree „ 7, '89	Nil	Weather—seasonable. Threshing of the winter crop (late *sarad*) is nearly over. *Dalua* crop is doing well. Rain is wanted for *mung* crop. Common rice 19 seers 12 chittacks per rupee in the Sudder sub-division and 17 seers 7 chittacks in the Khoorda sub-division.
40	Balasore „ 8, '89	Nil	Weather—again somewhat cooler. Sugarcane is being pressed. *Dalua* rice and cotton (both very petty crops) doing well.
CHOTA NAGPORE.			
South-West Frontier Agency.			
CHOTA NAGPORE DIVN.			
41	Hazaribagh Feb. 8, '89	Nil	Weather—bright and cold Prospects of *rubbi* and poppy crops are unchanged, except in Gawan, Kharrukdiha and Giridi, where some damage is reported to have been done by hail. Mustard is being gathered with about an 8-anna crop. Sugarcane pressing continues; probable outturn between 8 and 10 annas. Prices rising.
42	Lohardugga ...		Report not received.
43	Singbhoom „ 8, '89	Nil	Weather—dry and very hot. *Rubbi* crops being harvested; outturn 6 to 8 annas. Prices stationary.
44	Manbhoom „ 9, '89	Nil	Weather—fair and seasonable. Pressing of sugarcane continues vigorously; outturn 8 to 12 annas. Mustard, wheat and barley growing; expected average outturn 8 annas. New rice selling at 18 to 22 seers per rupee.

Published for general information.

The total fall of rain from 3rd to 9th February 1889 ...	Nil.
The average fall of the corresponding period for 24 years, S. G.'s Office ...	0·27
The total fall from 1st January to 9th February 1889	0·16
The average fall of the corresponding period for 24 years, S. G.'s Office ...	0·73

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, ≡ fog, ⌓ dew.

A. PEDLER,

For Offg. Meteorological Reporter to the Govt. of India.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF JANUARY 1889.

The normal meteorology of January in Bengal is very similar to that of the two previous cold-weather months, except that usually the cold-weather conditions are more strongly developed in this month than in any other part of this season. Fairly strong northerly winds with practically cloudless skies, and with low temperature and humidity, rather high pressure and an almost complete absence of rain obtain for the greater part of the month, unless these normal conditions are disturbed and almost reversed by the formation or appearance of barometric depressions over Northern India, which subsequently drift in a southerly or south-easterly direction through Central India and the North-West Provinces into Chutia Nagpur, Behar and Bengal. These disturbances give moist southerly and south-easterly winds to Bengal with heavily clouded skies and damp rainy weather, the day temperature remaining low, but the night temperature increasing largely. The heaviness of the rainfall brought up by these depressions varies largely, but the rainfall is usually largest in Behar.

Pratically the whole of the rainfall in January is brought about by these disturbances, and the amount is usually small, averaging from about a third of an inch in Orissa up to nearly two-thirds of an inch in North Behar and Chutia Nagpur

Meteorology of the month.—The chief features in the meteorology of January 1889 have been—

1. Pressure has been in excess over the whole province, the excess being very small in the south-western districts, and moderate in amount in the eastern and northern districts In Bengal the excess has averaged about 0·017 inch, while in Assam it has averaged 0·018 inch.

2. The average temperature for the whole month in Bengal has been about 2·2° above the normal, while in Assam the excess has been 2·4°. The distribution of temperature during the month has, however, been irregular, and while for the first half temperature was generally below the normal, during the second half it was above the normal by decidedly large amounts.

3. Humidity has been rather largely above the normal at almost all stations, the average variation in Bengal being an excess of about 13 per cent., while in Assam it has equalled 15 per cent.

4. Cloud proportion has been slightly above the normal in Bengal and rather largely above it in Assam.

5 There was an almost complete absence of disturbances until about the middle of the month; but on the 13th and 14th fairly general but light rain was brought to the greater part of Behar and North Bengal, and to parts of East Bengal by a disturbance which apparently travelled in a south-easterly direction along the line of the hills. Rainfall was again brought to the same districts and to Chutia Nagpur also on the 24th by a depression which advanced from Central India, but the most important rainfall during the month was brought by a decided barometric depression from Northern India which passed over Bengal on about the 30th and 31st, and which gave heavy rain to Behar and North Bengal, and moderate rain in all other districts, except Orissa.

6. Rainfall has been largely above the normal in North Bengal and Behar, moderately above it in South-West Bengal and Chutia Nagpur, slightly below it in East Bengal, while in Orissa rainfall has been almost absent, and has not been more than about a sixth of the usual fall.

The weather conditions for the first twelve days of the month call for practically no comment as they were of normal north-east monsoon character. The conditions then underwent change and a feeble depression formed on the 12th in Bengal, but this rapidly filled up, and on the 13th a depression which had previously been slowly advancing form Northern India along the line of the Himalayas existed apparently over the hills to the north of Behar and Bengal. Southerly moist winds then set in over the province for some days, temperature rose rapidly, and rain fell on the 13th and 14th in all districts except Orissa and South-West Bengal, but even in the last district a few showers were reported. Conditions again became settled and of ordinary north-east monsoon character from the 14th up to the 24th, and on this day a depression from Central India advanced over Bengal giving cloudly weather and light showers, but the depression rapidly passed in an easterly direction and fine settled weather again set in from the 25th to the 30th, when again Bengal was affected by two depressions which had formed in Central and Northern India, and which advanced in an easterly and south-easterly direction. This disturbance was of sufficient importance to give general and rather heavy rain on usually two days to almost all stations in the province, except in Orissa, and there is no doubt that this disturbance formed by far the most important feature in the meteorology of the whole month. The depression however, passed comparatively rapidly over Bengal, and by the 1st of February weather was again of normal north-east monsoon character.

Pressure.—Except for the variations of pressure caused by the passage of the depressions above described through the province, the oscillations of pressure have been of little importance. Taking into consideration only those stations from which pressure averages have been received for a number of years, and which therefore yield reliable averages, the mean

pressure of the month has been 0·017 inch in excess of the normal. In South-West Bengal and at the head of the Bay, as represented by such stations as Calcutta, Saugor Island and False Point, pressure has been almost normal, while such stations as Jessore, Chittagong and others show excess pressures of about 0·03 inch. In Assam also Dhubri shows a pressure almost normal for the month, while the other stations show a decided excess.

Temperature—Was comparatively low for the first half of the month and very high for the second half. For the whole month temperature has been in excess of the normal by about two degrees, though for a part of the month, from the 13th to the 18th, temperatures of from 6° to 8°, and even nearly 10° above the normal were reported.

The actual oscillations and variations of the temperature for the month from the normal are best shown in the following table, where the variations from the normal of the average maximum, minimum and mean temperature at nine typical stations in different districts of the province are given week by week :—

STATIONS.	WEEK ENDING 4TH JANUARY.			WEEK ENDING 11TH JANUARY.			WEEK ENDING 18TH JANUARY.			WEEK ENDING 25TH JANUARY.

Rainfall—The periods of rainfall during the month have already been discussed. The actual amounts of rainfall have been largest in North Behar, the stations of which average 2·88 inches for the month, or nearly five times the amount which falls in normal years. In North Bengal an average fall of 2·38 inches has been registered, or about six times the normal fall. South Behar has received an average amount of 1·90 inches, or from three to four times the normal. In South-West Bengal a fall of 0·82 inch is recorded, or about twice the usual amount; while in Chutia Nagpur an average fall of 0·80 inch has been registered, which is only slightly larger than the normal. In East Bengal the fall has been 0·46 inch, which is about four-fifths of the normal fall in this district, while finally in Orissa the rainfall has averaged merely a few hundredths of an inch, and is about a fifth of the usual fall only.

Taking up the rainfall more in detail, the following districts have received falls, which average more than three inches—Durbhunga, Mozufferpore and Maldah ; the following between two and a half and three inches—Dinagepore, Rungpore, Darjeeling Hills, Purneah, Bhagulpore Sarun and Monghyr; the following from two to two and a half inches—Bogra, Rajshahye, Julpigooree and Cooch Behar, Champarun, Patna and South 24-Pergunnahs. Falls of between one and two inches have been received in the districts of Beerbhoom and West Burdwan, Moorshedabad, Nuddea Pubna, Gya and Hazaribagh, and falls of between half and one inch in Midnapore, Burdwan, Jessore, Khoolna, Furreedpore, Dacca, Mymensingh, Shahabad, Lohardugga and Manbhoom. The smallest falls of less than a tenth of an inch, and where the districts have been practically rainless, are reported in Pooree, Cuttack, Balasore, Chittagong and Chittagong Hill Tracts and Noakholly.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the month of January 1889 :—

Meteorological Divisions.	Temperature.						Rainfall.

* Means of six days.
† Do. of five ,,

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years. The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 24 stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

for the week ending Friday, the 8th of February 1889.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. — RAINFALL. — Of week. Mean for district.	Of week. Normal mean.	Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 15th May 1888. Mean for district.	Since 15th May 1888. Normal mean.	Since 15th May 1888. Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation. Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the 12th February* 1889

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 8TH FEBRUARY 1889.

The meteorology of the previous week had been extremely important in Bengal from the fact that a large and influential disturbance had passed through the province from Central and Northern India, which had given general, and in many cases heavy rain, particularly in Behar and North Bengal. The depression had passed rapidly over the province and on the last day of the previous week it was in East Bengal, and on the first day of the present week it had quite disappeared in an easterly direction. With the disappearance of the depression weather conditions again became normal in Bengal for the north-east monsoon, temperature fell exceedingly rapidly in Bengal and Behar, and pressure rose, while skies cleared quickly, and rainfall ceased, except for one or two showers of no importance. The return of the weather conditions to those of normal north-east monsoon character took place on the 2nd and 3rd, and for the remainder of the week a fairly steady northerly and north-westerly wind current has been blowing over the province, and conditions generally have been those of a rather strongly pronounced cold weather type.

Pressure.—The principal variation in the pressure during the week was the very rapid rise which took place on the 2nd after the passing away of the depression. This rise in many cases was considerably larger than a tenth of an inch. This was generally followed by a smaller but steady increase of pressure, which continued up to about the 5th instant, but from this date, to the end of the week, pressure fell; the fall from the 7th to the 8th being again rather rapid. For the whole province for the week, taking into consideration only those stations from which observations have been received for a series of years, and which therefore yield reliable averages, the mean pressure has been 0.042 inch in excess of the normal for the same period. This excess has been largest in South and South-East Bengal, where at such stations as Dacca and Jessore it equals about 0.06 to 0.07 inch, and smallest in the north of the province, where the average excess is only about 0.03 inch.

Temperature.—As before mentioned, the principal change in the temperature of the province has been the rapid fall which accompanied the setting in of the normal northerly current at the commencement of the week. The fall was so large as to bring temperature considerably below the normal, and for the whole week the mean temperature of the province has been about 2° below the normal. This defect has been largest in South-West Bengal, where it has equalled no less than 3°.

The general range of temperature for the week, and its variation from the normal, are clearly seen in the following table, where the average maximum, minimum, and mean temperatures at nine typical stations in different districts of the province are compared with the normal values for the same period, and from which it will be seen that during the past week the day temperatures have been particularly low :—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 8th February 1889.

	Normal mean maximum temperature for the week ending 8th February	Actual mean maximum temperature for the week ending 8th February 1889	Variation of actual mean from the normal	Normal mean minimum temperature for the week ending 8th February	Actual mean minimum temperature for the week ending 8th February 1889	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 8th February.	Actual mean daily temperature for the week ending 8th February 1889.	Variation of actual mean from the normal.

Meteorological Office, Bengal,
The 12th February 1889

A. Pedler,
Offg Meteorological Reporter to the Govt. of Bengal.

MEMORANDUM.

THE principal Municipalities in Bengal presented during the week ending 26th January 1889, a birth-rate of 22·1 and a death-rate of 24·5 per 1,000 of population against a birth-rate of 24·8 and a death-rate of 24·1 per 1,000 in the preceding week ending 19th January.

2. The Municipalities which returned the highest proportions of births and deaths are:—

Births.

	Ratio per *mille*
Purneah ...	38 1
Utterpara ...	37 7
Monghyr ...	37 1
Rampore Beauleah ...	36 8
Puri ...	35 7
Serampore ...	35 3
Naraingunj ...	34 1
Durbhanga ...	31 5
Bhagulpore ...	30 8

Deaths.

	Ratio per *mille.*
Suburbs of Calcutta	49 8
Puri ...	41 1
Comillah ...	38 5
Purneah ...	38 1
Utterpara ...	37 7
Naraingunj ...	37 3
Serampore ...	33 4

3. The mortality from the principal diseases which is shown below did not exhibit any noticeable differences in comparison with the death rates from the same causes during the preceding week:—

	Ratio per *mille* during the weeks ending— 26th Jan 1889.	19th Jan 1889.
Cholera ...	3 1	2 4
Small-pox ...	·2	
Fever ...	8 4	8 9
Bowel-complaints ...	4 4	4 4
Injury ...	·4	·2
Other causes ...	8 0	8 2

4. Small-pox which appears to have prevailed noticeably in the Patna town only was attended with three deaths. Injury did not exhibit any local severity. Cholera, Fever, Bowel-complaints, and the maladies returned under the head of "Other causes" caused the highest mortality in the following Municipalities:—

Cholera.

	Ratio per *mille*
Suburbs of Calcutta	9 9
Howrah	7·4

Fever.

	Ratio per *mille.*
Comillah	30 8
Purneah	27 7
Jessore	24 5

Bowel-complaints.

	Ratio per *mille.*
Puri ...	10 5
Serampore	9 8
Suburbs of Calcutta	9 7

Other causes.

	Ratio per *mille.*
Puri ...	21 0
Naraingunj ...	16 6
Suburbs of Calcutta	14 9
Serampore	13 7
Bhagulpore ...	12 7

5. In relation to *Sex, Class* and *Age*, the mortality of the week was distributed as follows:—

According to Sex.

	Ratio per *mille.*
Males ...	25 9
Females ...	23 0
Ratio of male deaths to every 100 female deaths ...	127

According to Class.

	Ratio per *mille*
Christians ...	34 8
Hindus ...	25 5
Mahomedans ...	22 2

According to Age

	Ratio per *mille*
Under 1 year ...	202 4
1 and under 5 years ...	22 8
5 " 10 " ...	11 9
10 " 15 " ...	8 6
15 " 20 " ...	18 8
20 " 30 " ...	16 9
30 " 40 " ...	15·0
40 " 50 "	19 8
50 " 60 "	25 7
60 years and upwards ..	41 7

W. H. GREGG, *Dip. Publ. Health, Camb.,*
Offg. Sanitary Commissioner for Bengal.

The 11*th February* 1889.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending 26th January 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the [illegible] remains as before as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "Age," the ratios under which have been omitted, inasmuch as the census of

General remarks on the fluctuation of principal staples carried over the East Indian Railway during the month ended 31st December 1888.

INCREASES.

Coal and coke.—There was an increase in both the upward and downward traffic; that in the former was due to despatches for Foreign Railways and for the public, and the latter was due to greater demands from the Steamer Companies, both for coaling in Calcutta and for despatch to coaling stations on the coast.

Horses.—The increase under this head is considerable, and was principally in despatches from Howrah, Bankipore, and from the North-Western Railway *viá* Ghaziabad.

Cotton.—The increase in this commodity was due to despatches from Firozabad, Hathras Junction, Aligarh, Khurja, Delhi and Morena on the Sindia State line, both to Howrah and Bombay.

Piece-goods, European.—This was due to improved demands from the Calcutta market.

Indigo.—This increase is attributable to a late season.

Jute, raw.—This was chiefly due to despatches from the Assam-Behar State Railway *viá* Sahebgunge to Howrah, Bhadreswar, Chitpore and Cossipore.

Fruits other kinds.—This increase was principally in betel-nuts from Howrah.

Government stores.—Principally in despatches of ordnance stores from Howrah to meet Government requirements at Agra and Rawalpindi.

Iron.—The increase was principally in despatches from Calcutta in response to demands from Mirzapur, Cawnpore, Agra and Delhi.

Oil.—As reported previously, the increase under this head was chiefly in kerosine oil from Howrah.

Saltpetre.—This increase was for the most part in despatches from the Bengal-North-Western and the Tirhoot State Railways owing to improved demand in the Calcutta market.

Stone.—This was due in a great measure to despatches from Mirzapur, Pahara, and Chunar under the reduced rate of 3 annas per wagon-mile.

DECREASES.

Gunny.—This decrease may be ascribed to the almost entire cessation of the export trade in seeds.

Wheat.—Due to absence of demand for export.

Gram and pulses.—
Rice (husked and unhusked).—
Other rain and spring crops.—
} The heavy decreases under these three heads were due to there not being so great a surplus as last year for export from the loop line and Dinapore district, while in the North-West the demand was less than in 1887 owing to better crops.

Opium.—Due to despatches of opium from the factories to Howrah having been temporarily stopped owing to cloudy and showery weather.

Railway material, Foreign.—This is attributable to the cessation of despatches from Bombay *viá* Jubbulpore for the Indian Midland Railway.

Salt.—Due to decreased despatches of country salt from the Bombay, Baroda and Central India Railway at Agra, Delhi and Cawnpore, and *viá* these stations.

Seeds.—This decrease was chiefly in linseed, and was due to limited demand in Calcutta for export.

Sugar (refined and unrefined).—Almost the whole falling off in earnings under this head was in sugar received from the Gya line, *viá* Bankipore, and this was due to the crops in the districts bordering the Gya line being both late and poor.

ALLEN MEARS, *Deputy, Traffic Manager.*

TRAFFIC MANAGER'S OFFICE, JAMALPUR, *the 8th February* 1889.

Weekly Return of Traffic Receipts on Indian Railways.

ESTABLISHMENT OF A FREE STUDENTSHIP FUND BY BABU JOY CHANDRA GUPTA.

GENERAL DEPARTMENT—EDUCATION.

Calcutta, the 18th February, 1889.

RESOLUTION.

READ—

Correspondence ending with the letter from the Director of Public Instruction, No. 925, dated the 14th February, 1889, regarding the establishment of a Free Studentship Fund by Babu Joy Chandra Gupta, of Baidyabatty.

BABU JOY CHANDRA GUPTA has, on certain conditions, offered a donation of the sum of Rs. 600 in Government securities, yielding interest at 4½ per cent., for the encouragement of high English education in his native village of Baidyabatty, in the district of Hooghly, the privilege of studying for four years in the Metropolitan Institution on payment of half fees being granted to a selected student from Baidyabatty to enable him to read up to the B.A. standard of the Calcutta University. The Lieutenant-Governor is pleased to accept the donation, and tenders his thanks to the donor for his liberality.

ORDER—Ordered, that a copy of this Resolution be forwarded to the Director of Public Instruction for information and communication to the donor.

Ordered also, that a copy of this Resolution be published in the *Calcutta Gazette.*

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 16th February 1889.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.			
	Western Districts.		
BURDWAN DIVN.			
1	Burdwan Feb. 16, '89	Nil	Weather—seasonable. State and prospects of crops very fair. The *rubbi* harvest will be 12 annas at least. Prices of rice fluctuate a good deal, the last being a fall to 18 seers per rupee.
	Culna ...	0·12	
	Cutwa ...	0·60	
	Raneegunge ...	0·25	
2	Bankoora " 16, '89	0·07	Weather—seasonable. The rainfall on Tuesday, the 12th instant, has been beneficial to the standing crops, namely, wheat, barley, gram, &c., which are coming on well. Mustard and some of the pulses are being reaped. Cutting and pressing of sugarcane continue. No change in prices.
3	Birbhum " 16, '89	0·76	Weather—becoming much hotter. Prospects of *rubbi* good. Sugarcane pressing progressing.
4	Midnapur " 16, '89	1·50	Weather—seasonable. *Rubbi* crops are now being harvested; outturn fair. *Boro* better after late rain.
5	Hugli " 16, '89	0·15	Weather—seasonable. Prospects of *rubbi* crops good. Potatoes in the Serampore sub-division are very good—if not 16 annas, at any rate 14 annas. Sugarcane is being cut
	Serampur ..	0·35	
	Howrah " 18, '89	1·04	Weather—seasonable. Transplantation of *boro* paddy seedlings still in progress. Recent floods in Ulubarya jurisdiction caused some loss.
	Ulubarya ...	1·12	
	Central Districts.		
PRESIDENCY DIVN.			
6	24-Perghs. Feb. 19, '89	1·06	Weather—rainy on the 12th. The rain, which has been general throughout the district, has somewhat improved the prospects of the standing crops. Cutting of sugarcane is going on. Tillage continues.
7	Nuddea " 16, '89	0·37	Weather—seasonable. The hail-storm in the south of the district did some damage to the standing crops, which was more than compensated by rain in other parts. Tillage for *aus* in good progress. *Rubbi* much improved by rain.
	Kooshtea ...	0·53	
	Meherpur ...	0·87	
	Chooadanga ...	0·60	
8	Khoolna " 16, '89	0·10	Weather—cool. *Amun* crop harvested and stored. *Boro* transplantation is going on. *Rubbi* crops doing well.
9	Jessore " 16, '89	0·05	Weather—warm in day and cold in night. Harvesting of *rubbi* crops going on; outturn fair.
	Jhenidah ..	0·50	
	Magoora ...	0·25	
	Narail ...	0·20	
10	Moorshedabad " 16, '89	0·55	Weather—cool and fine. A shower of rain on the 11th. *Rubbi* crops promise well.
	and ...	0·55	
	Jangipur .	0·20	
RAJSHAHYE DIVN.			
11	Dinagepur , 16, '89	0·46	Weather—cloudy and temperature very changeable. Land is being ploughed for early sowings. Prospects of standing crops fair. Price of rice unaltered.
12	Rajshahye " 16, '89	0·49	Weather—much warmer. Condition of the spring crops is fair Rain has done good. Average price of rice 16 seers 12 chittacks per rupee.
	Nattore ...	0·15	
	Nowgong ...	0·42	
13	Rungpur " 16, '89	0·68	Weather—getting warm The hail in Nilphamari has caused some injury to tobacco, otherwise all the standing crops are thriving well. Cutting and crushing of sugarcane still in progress. Harvesting of mustard completed with good outturn.
	Kurigram ...	0·52	
	Nilphamari ...	1·15	
	Gaibanda .	0·29	
14	Bogra " 16, '89	0·14	Weather—seasonable. Sugarcane is being cut. Mustard has been harvested with an indifferent outturn. The other *rubbi* crops are doing very fairly.
	Sherpore ...	0·32	
	Nowkhila ..	0·20	
15	Pubna " 16, '89	0·49	Weather—seasonable. *Rubbi* crops slightly improved. Outturn of sugarcane fair. Ploughing for next rice crop going on.
	Serajgunge ...	0·17	
16	Darjeeling " 16, '89	0·33	Weather—getting much warmer Lands in the plains are being prepared for *bhadoi* crops. Crops getting on well.
17	Julpigoree " 16, '89	0·20	Weather—getting warm. Gathering of mustard nearly finished; outturn estimated at 11 annas. Other standing crops doing well. Ploughing has commenced for *aus* and jute.
	Eastern Districts.		
DACCA DIVN.			
18	Dacca Feb. 16, '89	0·12	Weather—seasonable. Cutting of sugarcane continues. Mustard and pulses are being gathered. Prospects of crops good.
	Manickgunge ...	0·14	
19	Furreedpur " 16, '89	0·18	No change of any kind to report. Crop prospects all good.
	Goalundo ...	0·22	
20	Backergunge " 14, '89	Nil	Weather—seasonable. Prospects of *rubbi* crops good.
21	Mymensingh " 15, '89	0·21	Weather—seasonable. The late rain has done good to the standing crops. Prospects good.
	Jamalpur ...	0·11	
	Kishoregunge ...	0·21	
	Attia ...	0·24	
CHITTAGONG DIVN.			
22	Chittagong " 19, '89	Nil	Weather—seasonable. Rain much wanted for winter crops. Prices steady.
23	Noakholly " 15, '89	Nil	Weather—seasonable. Some of the *rubbi* crops are being harvested. These crops are good except in the northern part of the district. Ploughing for *aus* commenced.
24	Tipperah " 14, '89	Nil	Weather—seasonable. *Boro* plants are thriving well. More rain is wanted for the winter crops.
25	Chittagong Hill Tracts. " 12, '89	Nil	Weather—very cold during the first part of the week. Cloudy this day (12th). *Jum* cutting continues. Tobacco and *chillies* are progressing. Mustard is being gathered.
	Hill Tipperah " 14, '89	Nil	Weather—getting warm. *Jums* being cut. Mustard and sugarcane being gathered.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.				
PATNA DIVN.	26	Patna Feb. 16, '89	0·08	Weather—getting warm gradually. *Rubbi* and poppy doing well. Prospects good. In the Barh sub-division mustard, *mussoor*, peas and gram are being reaped. Prices stationary.
		Dinapur ...	0·21	
		Barh ...	0·16	
		Behar ...	0·77	
	27	Gya „ 16, '89	0·33	Weather—getting warmer. Harvesting of paddy finished. *Rubbi* harvest has begun. Poppy is being extracted.
	28	Shahabad „ 16, '89	0·34	Weather—fine, but getting hotter. *Rubbi* doing well, but some of the crops have been slightly damaged by hail in the Kaimur plateau in the Bhabuah sub-division. Prospects of poppy continue very good. Prices stationary.
		Sasseram ...	0·21	
		Bhabuah ...	0·10	
	29	Durbhunga „ 16, '89	0·14	Weather—getting hot. *Rubbi* prospects greatly improved by the late rain. *Cheena, mung* and paddy are being sown. Tobacco and poppy look well. Lands are being prepared for indigo. Prices stationary.
		Madhubani ...	0·13	
	30	Mozufferpur „ 16, '89	0·15	Weather—clear and bright. Rather warm for the season. All standing crops have benefited by the rain. Prospects of *rubbi* and poppy everywhere good. *Cheena* and *mung* are being largely sown in Sitamurhi.
		Hajipur ...	0·21	
		Sitamarhi ...	0·35	
	31	Sarun „ 16, '89	0·38	Weather—seasonable. Prospects of both *rubbi* and poppy crops continue favourable. Sugarcane planting commenced. Lands are being prepared for indigo.
		Sewan ...	0·13	
		Gopalgunge .	0·33	
	32	Chumparun „ 16, '89	0·37	Weather—fair. Prospects of *rubbi* and poppy good. *Cheena* and *mung* are being sown. A slight damage to wheat is said to have been caused by the recent rainfall in the Bettiah sub-division. Prices stationary.
		Bettiah ..	0·45	
BHAGULPORE DIVN.	33	Monghyr „ 16, '89	0·31	Weather—seasonable and fine; getting warm gradually. Prospects of *rubbi* continue favourable, though the late rain has done damage to the standing crops in places.
		Begusserai ...	0·31	
		Jamooe ...	0·26	
	34	Bhagulpur „ 16, '89	1·16	Weather—getting warmer. Heavy rain one day. Preparation of lands continues, and *cheena* is being sown. Prospects of *rubbi* fair, but no more rain is wanted now. Peas and gram are being harvested.
		Banka ...	0·25	
		Madhepurah ..	0·16	
		Soopool .	0·06	
	35	Purneah „ 16, '89	0·29	Weather—cool and seasonable. *Tori* (mustard) and tobacco are being harvested; outturn is good. Agricultural operations are in full swing, and prospects are favourable.
		Kishengunge ...	0·20	
	36	Maldah „ 16, '89	0·22	Weather—rather warmer. *Boro* paddy is being transplanted. The *rubbi* crops are maturing, and the prospects are good in places where the hail-storm of the 30th January has not destroyed or damaged the crops.
		Chanchal ...	0·54	
		Shibgunge ...	0·09	
		Gajole ...	0·62	
	37	Sonthal Perghs. „ 16, '89	0·30	Weather—clear; getting warmer daily. Prospects of standing crops continue fair. Prices stationary.
		Deoghur ...	0·19	
		Godda ...	0·25	
		Jamtara ...	0·21	
		Pakur ...	0·18	
		Rajmahal ...	0·50	
ORISSA.				
ORISSA DIVN.	38	Cuttack Feb. 15, '89	Nil	Weather—seasonable. *Sarad* and *rubbi* crops are being gathered. *Dalua* rice progressing well. Price of rice rising.
	39	Pooree „ 14, '89	Nil	Weather—seasonable. Harvesting of the winter crop (late *sarad*) is over. *Dalua* crop is doing well. Mango in blossom. Rain is wanted for *mung* crop. Common rice 19 seers 6 chittacks per rupee in the Sudder sub-division and 15 seers 1 chittack in the Khoordah sub-division.
	40	Balasore „ 15, '89	Nil	Weather—still cool in the morning. *Dalua* rice doing well. Sugarcane is being pressed. Prices remain pretty stationary.
CHOTA NAGPORE.				
South-West Frontier Agency.				
CHOTA NAGPORE DIVN.	41	Hazaribagh Feb. 15, '89	0·20	Weather—seasonable. Prospects of *rubbi* and poppy same as before. Harvesting of mustard continues with about an 8-anna crop. Prices going up in Chutra.
	42	Lohardugga „ 16, '89	Nil	Weather—days hot, mornings and evenings cool. Prospect of *rubbi* not favourable. Prices as before.
	43	Singbhoom „ 15, '89	Nil	Weather—dry and hot during the day, cool at night. *Rubbi* being harvested; outturn 6 to 8 annas. Prices stationary.
	44	Manbhoom „ 16, '89	Nil	Weather—seasonable. Outturn of sugarcane estimated at 10 annas for the district. Other spring crops vary from 8 to 12 annas. Prices rising.

* Mean of six days.
† Do. of five ,,

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years.
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 21 stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

for the week ending Friday, the 15th of February 1889.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	District Observations. Rainfall. Of week. Mean for district.	Of week. Normal mean.	Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 15th May 1888. Mean for district.	Since 15th May 1888. Normal mean.	Since 15th May 1888. Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—... Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 19*th February* 1889

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 15TH FEBRUARY 1889.

AT the end of the preceding week an unimportant low pressure area had formed over Bengal, but it influenced the weather only in raising the temperature and humidity, and in giving southerly winds in the southern parts of the province. On Saturday, the first day of the present week, this low pressure area had almost disappeared; winds had again become northerly in South Bengal, and only at the eastern stations the wind directions were southerly. The temperature was slightly above the normal, giving an average excess of about 2° for the whole province. Fine weather prevailed on Saturday and Sunday throughout the province, and temperature and humidity continued to increase, the average excess showing a daily increase of about one degree. A low pressure area, which had formed in Central India from 9th to the 10th, moved eastward on Sunday, and on Monday it covered Chutia Nagpur and caused unsettled weather in Bengal on Monday and Tuesday. The barometer fell over the whole province, and weather became cloudy, except in East Bengal. Moderate and fairly general rain fell in Bengal and Behar in connection with the depression, though at many places where the fall was greatest, the rain accompanied local thunderstorms. On Tuesday the depression had become more shallow, and was over East Bengal, and on the morning of the 13th it had completely disappeared and weather became fine, and remained so until the close of the week. On Monday the wind directions were irregular, though generally southerly over the greater part of the province; but on the following day, with the departure of the depression, northerly winds again began, except in East Bengal. On Tuesday, the 12th, the average excess temperature for Bengal was 4½°, but with the renewal of the northerly winds temperature fell, and on Wednesday there was everywhere a considerable reduction. The fall was rapid in South Bengal, equalling 5° at some stations. For the last three or four days of the week the weather was fine and winds light, but moderate oscillations occurred in pressure, a moderate rise taking place on Wednesday and Thursday, and a moderate fall on Friday. Temperature was fairly low, though generally rising. Thus the only important event in the week's meteorology has been the passing of the low pressure area in the early part of the week, giving high temperatures in front of and during the depression, followed by low temperature in its rear and fairly general rain in Behar and Bengal.

Pressure.—Pressure has been high during the whole week, and though considerable oscillations occurred, it never fell below the normal. For the week the average excess for all districts lies between ·05" and ·1". At the commencement of the week, while the slight depression existed over Bengal and Behar, the average pressure was almost normal, and on its filling up, pressure rose everywhere about ·05" above it This somewhat rapid rise occurred on Sunday, the second day of the week. On the approach from Central India of the depression which began to affect the weather in Behar and Bengal on Monday, the pressure everywhere gave way with moderate rapidity, and the decrease continued in all districts, except Orissa and South Bengal, during the following day. The low pressure area was rapidly transferred eastwards, and on Wednesday there was a moderate rise everywhere. The pressure was then considerably above the normal over the whole province, this excess being greatest in Orissa, where it was about a tenth of an inch. The rise continued slowly on Thursday, but gave place to a brisk fall on Friday. The pressure still remained considerably in excess of the normal.

Temperature.—Temperature has been decidedly above the normal in Orissa, Behar and North Bengal; elsewhere the excess has not been large. At some stations in South Bengal temperature has been almost normal on the average for the week. In the early part of the week the variations from the normal were very irregular, varying from zero to four or five degrees. In North Bengal the excess was in the night temperatures usually, the day temperatures being not unfrequently in defect. Changes were also very irregular during the first few days. At most stations there was a slow steady rise, while at a few there were fairly rapid rises and falls. These slow steady changes being most common kept the mean temperature high in several districts. On Wednesday the temperature fell rapidly everywhere, giving slight defect over the greater part of the province. The largest fall was nearly 7° at Dacca, and at many stations the fall amounted to 5°. After that the changes were usually small, though there was a slight general rise on Friday. The mean for the whole province was about 2° in excess at the beginning of the week, and increasing by nearly a degree daily became about 4½° in excess on Tuesday. The rapid fall on Wednesday made the mean nearly normal, but by the end of the week it was again slightly in excess.

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 15th February 1889.

	Normal mean maximum temperature for the week ending 15th February.	Actual mean maximum temperature for the week ending 15th February 1889.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 15th February.	Actual mean minimum temperature for the week ending 15th February 1889.	Variation of actual mean from the normal. Rainfall.—On Monday humidity became high over the greater part of Bengal and Behar; in Behar the sky was densely clouded, and light rain fell in many parts, the largest amount being about three-fourths of an inch. On Tuesday general light rain fell, but where local storms occurred the fall was heavier. At Midnapore 1·5 inches of rain fell, and at several other places more than an inch. In Orissa scarcely any rain fell. The average for the province was about a quarter of an inch. South-West Bengal and North Bengal each received 0·4 inch, and South Behar 0·3 inch In Orissa the average was 0·01 inch. In Behar the rain fell on Monday, but elsewhere on Tuesday, and after that till the end of the week no rain fell.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 15th of February 1889:—

Meteorological Divisions.	Temperature						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1888.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, p passing temporary showers, t thunder, < lighting, ≡ fog, ⌓ dew.

N.B.—In the Weekly Report from 27th January to 2nd February 1889, read WNW and WSW for WNW and NSW as the prevailing wind directions of the 28th January 1889.

MEMORANDUM.

THE birth and death returns of the principal Municipalities in Bengal for the week ending 2nd February 1889 present the following results: —

1. Births were registered at the rate of 21· per 1,000 of population and deaths at 22·8. The ratios of the preceding week ending 26th January were 22·1 and 24·5 per 1,000 respectively. There was thus a falling off in the registration of both births and deaths during the week ending 2nd February.

2. The highest proportions of births and deaths were returned from the following Municipalities:—

Births.

	Ratio per *mille.*
Utterpara	47·2
Bali	45·6
Monghyr	40·7
Naraingani	37·3
Rampore Beauleah	36·8
Puri	35·7
Comillah	30·8
Gya	29·4

Deaths.

	Ratio per *mille*
Suburbs of Calcutta	48·6
Darjiling	45·6
Serampore	37·3
Naraingani	33·1
Howrah	29 8

3. The following figures represent the rates of mortality from the diseases mentioned below, contrasted with similar information for the preceding week ending 26th January:—

	Ratio per *mille* during the weeks ending— 2nd Feb. 1889.	26th Jan. 1889.
Cholera	3·3	3·1
Small-pox	·3	·2
Fever	8·7	8·4
Bowel-complaints	4 0	4·4
Injury	·5	·4
Other causes	6 0	8 0

It will be observed that there was an appreciable decrease of mortality only under the head "Other causes."

4. Of the diseases above named, Cholera, Fever, Bowel-complaints, and "Other causes" proved conspicuously fatal only in the following Municipalities, and Small-pox only in the Patna town, where the death-rate from this cause stood at 1·6 per 1,000 of population:—

Cholera.	Ratio per *mille.*	*Fever.*	Ratio per *mille.*	*Bowel-complaints.*	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Howrah ...	13·2	Darjiling ...	32·6	Suburbs of Calcutta	11·0	Serampore ...	13·7
Suburbs of Calcutta	10·5					Puri ...	12·6
						Midnapore ...	12·4
						Suburbs of Calcutta	10·1

5. Distributed under the heads of *Sex, Class* and *Age,* the mortality of the week stood as follows:—

According to Sex.

	Ratio per *mille.*
Males	24·1
Females	21·4
Ratio of male deaths to every 100 female deaths	127

According to Class.

	Ratio per *mille.*
Christians	13·0
Hindus	23·9
Mahomedans ...	21·0

According to Age.

	Ratio per *mille.*
Under 1 year ...	154 3
1 and under 5 years ...	29·9
5 " 10 " ...	8·3
10 " 15 " ...	9·5
15 " 20 " ...	11·5
20 " 30 " ...	18·2
30 " 40 " ...	15·0
40 " 50 " ...	23·3
50 " 60 " ...	22·4
60 years and upwards ...	58 1

W. H. GREGG, *Dip. Publ. Health, Camb.,*
Sanitary Commissioner for Bengal.

The 18*th February* 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE OPIUM DEPARTMENT, 1887-88.

REVENUE DEPARTMENT—MIS. REVENUE.

Calcutta, the 26th February, 1889.

RESOLUTION.

READ—

A letter No. 93B, dated the 29th January, 1889, from the Officiating Secretary to the Board of Revenue, L. P., forwarding the reports of the Opium Agents of Behar and Benares for the year 1887-88.

The report submitted by the Board of Revenue on the present occasion is in more than one respect to be specially commended. It is considerably shorter and more concise than any of its immediate predecessors, and this has no doubt resulted to some extent from what is in itself a decided improvement, viz., the plan of reviewing the operations of both Agencies together, instead of separately as in former years. The most prominent features of the season's cultivation are, moreover, for the first time illustrated by a series of useful diagrams, which show at a glance, in the case of each Agency, the percentage of cultivation under poppy, the extent of land irrigated, and

the average produce per bigha. In future reports a further improvement may perhaps be effected by combining these maps, so as to make each include both Agencies, and in this way carry out the reform noticed in the case of the review itself.

2. Settlements were curtailed by 35,178 bighas, while the area actually cultivated showed a still further contraction, being 40,711 bighas short of that of the preceding year; but, although there was this decrease in area shared in by both Agencies, there was an increase in the quantity of opium produced, amounting to 10,609 maunds at Patna and 4,856 maunds at Benares. The quality of the drug, also, appears to have been generally finer and of a higher consistence than usual, and in the Benares Agency it is said to have been better than has been reported for years. To these excellent results climatic influences no doubt largely contributed, for the weather, although by no means uniformly favourable throughout the year, is said to have been decidedly so at the critical time of lancing and collecting the juice; but, allowing for this, the Lieutenant-Governor considers that the department is to be congratulated on its success in extending the system, to which special attention was drawn in last year's Resolution, of limiting the area of cultivation and effecting settlements to the greatest advantage by insisting upon the judicious selection of the best and most conveniently situated lands, as well as of experienced and successful cultivators only. The extension of cultivation was formerly the object of Government, but a departure was made in the year 1885-86 in consequence of the large stock of opium in hand at the commencement of that season, and orders were then passed with a view to prevent any further increase in production. The change of policy thus initiated has recently been given a still more pronounced turn by the issue of instructions directing a specific reduction of cultivation, a step necessitated by the further accumulation of an excessive reserve both at Calcutta and in the factories. These orders, it is explained by the Benares Agent, were not received till after the settlements had commenced and had made fair progress: but nevertheless it appears from the figures given that a loyal effort was made to give effect to the wishes of Government. Unremunerative tracts were abandoned, advances refused to unsatisfactory cultivators and bad villages, inferior cultivation in the neighbourhood of large towns closed, and by these means the area, which the Agent had been desired to limit to 425,000 bighas, actually reduced to 427,569 bighas. This is all the more creditable, as Mr. Rivett-Carnac reports that in the Benares Agency the cultivation of opium is gaining in popularity, and nothing causes so much disappointment among the cultivators as an order limiting its production. In the Behar report the subject of contracting the cultivation is practically left unnoticed, being deferred till next annual report, the decrease in the area of settlement being attributed to the lateness of the rains. The Lieutenant-Governor does not doubt that the action of the officers of the Behar Agency during the current year will show that they have understood and given effect to the orders of Government on this subject. As regards the quality of the produce, a remarkable advance is noticeable in both Agencies, and particularly in Benares, in the deliveries of opium of a consistence of over 70°. From Mr. Rivett-Carnac's observations on this subject, it would appear that opium of a consistence above 75° is too stiff to be readily worked down to the prescribed standard, a fact which should be borne in mind, lest attempts to improve quality, as tested by consistency, be pushed too far. There was a satisfactory increase in the deliveries of pussewah.

3. In Behar all outstanding balances were recovered, it is said, without any difficulty or complaint on the part of the cultivators, and the fact is highly creditable to all of the officers concerned. In Benares, the Agent shows that out of a balance of Rs. 10,91,082, which had accumulated on account of advances for opium during the years 1879-80 to 1887-88, Rs. 5,375 only now remain to be adjusted, and the enquiries made indicate that the greater portion of this will be recovered without hardship to the cultivators. The progress in the matter of recovery has no doubt been slow, but this has been due to the considerate policy observed under the orders of Government, and the final result leaves little to be desired.

4. It is reported that the orders of Government requiring the sanction of the officers of the department to prosecutions under the Opium Act continue to work well, petty offenders against the letter of the law being left unharassed, and only real culprits brought to justice. The assurance is satisfactory, but the figures given disclose nothing of importance, there having been 1,151 prosecutions and 976 convictions, against 1,134 prosecutions and 968 convictions in 1886-87. The subject of placing on a legal footing the present system of granting licenses for the cultivation of the poppy has, during the year under review, been disposed of in the manner suggested by the Conference convened to consider the difficulty brought to the notice of Government by the Board. Revised forms of licenses and their counterfoils have now been issued with the approval of Government.

5. The thanks of Government are due to the Board and to the Opium Agents for their efficient supervision of the Department during the year, and the Lieutenant-Governor has read with pleasure the generally favourable remarks made on the work of the officers generally. These will, as usual, be communicated to the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Govt. of Bengal.

REPORT ON THE STATE OF THE SALT MARKET FOR THE THIRD QUARTER OF 1888-89.

No. 132B., dated Calcutta, the 13th February 1889.

From—K. G. Gupta, Esq., Offg. Secy. to the Board of Revenue, L.P.,

To—The Secretary to the Government of Bengal, Financial Department.

Salt.

F. M. Halliday, Esq.

I am directed by the Board of Revenue to submit the following report on the state of the salt market for the third quarter of 1888-89, comprising the months of October, November and December 1888.

2. The quantity of salt of every description cleared during the quarter under report amounted to 24,20,274 maunds 38 seers 9 chittacks, against 25,58,891 maunds 37 seers 10 chittacks in the previous quarter, and 27,10,003 maunds 8 seers 2 chittacks in the corresponding quarter of the previous year; and the net amount of duty levied thereon was Rs. 56,74,386, against Rs. 59,62,538-12 in the previous quarter, and Rs. 50,56,522-2-8 in the corresponding quarter of the previous year.

3. The quantity of excise salt sold in Orissa during the quarter under review and the quantity which remained in store at the close of the quarter are shown in table I:—

Table I.

	Cuttack.	Pooree.	Balasore.
	Mds. s. t.	Mds. s. t.	Mds. s. t.
Balance at close of the last quarter	2,541 5 0	2,16,433 35 0	......
Manufactured or added during the quarter	......	4 33 60	......
Total ...	2,541 5 0	2,16,438 28 60	......
Sales during the quarter	500 0 0	33,827 33 60	......
Wastage	1,682 5 0	6,774 25 0	......
Total ...	2,182 5 0	40,602 18 60	......
Balance at the close of the quarter	359 0 0	1,75,836 10 0	......

4. The above statement shows that the total sale of excise salt during the quarter under review amounted to 34,327 maunds 33 seers 60 tollahs, against 36,800 maunds in the previous quarter, and 59,660 maunds 5 seers in the corresponding quarter of the previous year.

5. The subjoined table shows in comparison the importations into the port of Calcutta and the total clearances of sea-imported salt during the quarter under review and the corresponding quarters of the previous two years:—

No transactions in sea-imported salt have been reported for the quarter from the ports of Pooree and Balasore.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 23rd February 1889.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
		Western Districts.		
Burdwan Divn.	1	Burdwan Feb. 23, '89	0·36	Weather—warm with clouds. Prospects of crops very fair. *Rubbi* 12 annas. Prices of rice continue to fall, and are now 19 seers per rupee on the average.
		Culna ..	0·25	
		Raneegunge ...	0·16	
	2	Bankoora „ 23, '89	0·32	Weather—cold and occasionally cloudy. Prospects of *rubbi* continue fair. The late rain has enabled the cultivators to plough the land for the next rice crop. No change in prices.
	3	Birbhum „ 23, '89	0·35	Weather—seasonable. *Rubbi* a twelve-anna crop, also sugarcane. Lands are being ploughed.
		Rampur Hât .	0·96	
	4	Midnapur „ 23, '89	4·01	Weather—cool after the recent rain. The rain has done good to both *boro* and *rubbi*.
	5	Hugli „ 23 '89	0·85	Weather—seasonable. *Rubbi* crops will have an average outturn, and are being harvested.
		Serampur .	1·05	
		Jehanabad .	1·12	
		Howrah „ 25, '89	1·59	Weather—rather warm for season. State and prospects of crops good.
		Ulubarya ...	2·41	
		Central Districts.		
Presidency Divn.	6	24-Perghs. Feb. 26, '89	1·51	Weather—rainy in middle of week: now daily getting warmer. Prospects of standing crops satisfactory. Manufacture of sugar continues. Tillage going on rather briskly since the recent rain.
	7	Nuddea „ 23 '89	0·11	Weather—seasonable. Prospects of *rubbi* favourable, and improvin in Kushteag. Harvesting of linseed in progress. Ploughing operations for *aus* facilitated by the slight rain.
		Kooshtea ...	0·23	
		Chooadanga ..	0·20	
		Ranaghat ..	0·41	
	8	Khoolna „ 23, '89	0·28	Weather—cold and seasonable. *Boro* and *rubbi* crops doing well.
	9	Jessore „ 23, '89	0·70	Weather—first part of the week rainy. The heavy shower on the night of 20th has been beneficial to ploughing.
		Jhenidah ..	0·15	
		Magoora	[illegible]	
		Narail	0·71	
		Bongong ..	0·90	
	10	Moorshedabad „ 23, '89	0·35	Weather—bright and cool. Lands are being prepared for *bhadoi* crop, and prospects of *rubbi* are favourable.
		Lalbagh ..	0·21	
		Kandi	0·31	
		Jangipur .	0·80	
Rajshahye Divn.	11	Dinagepur „ 23, '89	0·11	Weather—cloudy and rainy with occasional cold winds. The crops on the ground are doing pretty well, the rain having improved the prospects. Prices remain unaltered.
		Thakurgaon . .	0·57	
	12	Rajshahye „ 23, '89	0·52	Weather—still fairly cool. Condition of spring crops fair. Recent rain has done harm in places. Ploughing going on. Rice sells at 16¾ seers per rupee.
		Nattore ...	0·20	
		Nowgong ..	0·15	
	13	Rungpur „ 23, '89	0·25	Weather—seasonable. Prospects of standing crops good. Price of rice stationary.
		Gaibanda	0·22	
	14	Bogra „ 23, '89	0·28	Weather—seasonable. Standing crops promise well. Sugarcane is being cut and crushed. Land is being ploughed for early sowings. Pulses are being harvested. Price of rice stationary.
		Sherpore ...	0·77	
		Nowkhilla ...	0·95	
	15	Pubna „ 23, '89	0·15	Weather—cloudy with slight rain now and then. Prospects of *rubbi* crops better.
		Serajgunge ...	0·03	
	16	Darjeeling „ 23, '89	0·88	Weather—cold and cloudy. State and prospects of crops good.
	17	Julpigoree „ 23, '89	0·68	Weather—cloudy. Preparation of lands for *aus* and jute continues. Cutting and crushing of sugarcane in progress. Tobacco is being cut. Common rice sells at 17 seers per rupee.
		Eastern Districts.		
Dacca Divn.	18	Dacca Feb. 23, '89	Nil	Weather—seasonable. Lands are being ploughed for early rice. Mustard has nearly been gathered. *Boro* paddy thriving. Prospects of crops good.
		Manickgunge .	0·04	
		Munshigunge ...	0·8	
	19	Furreedpur „ 23, '89	0·07	Weather—cloudy, cool with continual threats of rain, which come to very little. The weather is very favourable for preparation of land for coming rice crops. Cold-weather crops doing well. Rain would make them remarkably good.
		Madaripur ...	0·66	
	20	Backergunge „ 22, '89	0·81	Weather—seasonable. Prospects of *rubbi* crops good.
	21	Mymensingh „ 22, '89	Nil	Weather—cloudy. Prospects of crops good.
		Jamalpur ...	0·33	
Chittagong Divn.	22	Chittagong „ 26, '89	0·31	Weather—seasonable. Winter crops thriving. Prices steady.
	23	Noakholly „ 22, '89	0·17	Weather—seasonable. Harvesting of *rubbi* crops continues. Soil for *aus* crops is being prepared.
		Fenny ...	0·35	
	24	Tipperah „ 21, '89	1·13	Weather—seasonable. Winter crops are progressing well. More rain is wanted.
	25	Chittagong Hill Tracts. „ 19, '89	Nil	Weather—cold and foggy in the moring and hot at noon. *Jum* cutting continues. Gathering of mustard is now over. Tobacco and chillies progressing. Rain much wanted.
		Hill Tipperah „ 21, '89	Nil	Weather—unsettled, occasionally cloudy and warm. *Jum* cutting continues. No important crop in the fields.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.			
PATNA DIVN.			
26	Patna Feb. 23, '89	1·18	Weather—getting warmer. Mustard, *mussoor* and peas are being harvested. Prospects of standing crops, including poppy, still favourable, though damage done to gathered and ripe crops by recent heavy rain. Poppy damaged in some places by hail. Prices stationary.
	Barh ...	2 55	
	Behar ...	1·06	
	Dinapur ...	0 60	
	Hilsa ...	0·50	
	Bickrum ...	1 00	
27	Gya „ 23, '89	2·80	Weather—fair, getting warmer gradually. *Rubbi* and poppy have been injured by the last rain and hail. Opium collections are going on in the early sown crop.
28	Shahabad „ 23, '89	0·64	Weather—unsettled. *Rubbi* crops continue to be favourably reported. Rain has done slight damage to peas and *mussoor*. Hail did damage to poppy over a limited area, but on the whole conditions are favourable to the collection of the drug which has now begun. Prices stationary with a slight tendency to fall.
	Buxar ...	0 72	
	Sasseram ..	0 45	
	Bhabuah	0·70	
29	Durbhunga „ 23, '89	0 51	Weather—bright and getting hot. *Rubbi* prospects continue favourable. *Cheena*, *mung* and paddy are being sown. Poppy in low lands has been to some extent injured by the late rain. Mustard being harvested. Prices remain stationary.
	Madhubani ...	0 69	
	Tajpur ...	1·75	
30	Mozufferpur „ 23, '89	1·29	Recent rain prolonging cold weather. *Rubbi* generally doing well, though somewhat battered by rain. *Cheena* and *mung* have been widely sown in north, and are germinating well.
	Hajipur ...	1 11	
	Sitamarhi ...	0 42	
31	Sarun „ 23, '89	0·80	Weather—seasonable. The *rubbi* crops have been slightly injured by the late rain. Prospects, however, continue favourable, and 12 annas outturn expected. Sugarcane planting goes on.
	Sewan	0 76	
	Gopalgunge	1 30	
32	Chumparun „ 23, '89	0·57	Weather—bright, days warm, nights cool. The recent rain has benefited the standing *rubbi* crops, though slight damage has been caused by excess fall and the hail which accompanied it in places. Poppy is reported to have suffered to some extent in the Betteah sub-division. Extraction of drug has commenced, and the crop generally is in flower. Prices fairly steady.
	Betteah	1 57	
BHAGULPORE DIVN.			
33	Monghyr „ 23, '89	0·61	Weather—seasonable; cloudy at times. Standing crops doing well.
	Beguserai ...	2 05	
	Jumooe .	0 78	
34	Bhagulpur „ 23, '89	0 62	Weather—stormy and cloudy on two days; since then seasonable. Peas, gram and *mussoor* are being harvested in places. The storms have damaged ripening crops, especially *rahar*, castor and linseed, also the mango blossoms. Prospects of *rubbi* crops fair.
	Banka ...	0·54	
	Soopool	0 95	
	Madhepurah	1·10	
35	Purneah „ 23, '89	0·08	Weather—getting warmer daily. Light showers *Tori* (mustard) and tobacco are being harvested; fair crops expected. Preparation for *bhadoi* sowings commenced
	Arrareah ...	0 36	
36	Maldah „ 23, '89	0 05	Weather—cool and dry; occasionally cloudy. Prospects of *rubbi* crops favourable in places where they were not damaged by the late hail-storm. Tillage for *bhadoi* crops has commenced. *Boro* is being transplanted.
	Chanchal ...	0 13	
	Sibgunge ...	0 27	
	Gajole ...	0 33	
37	Sonthal Perghs. „ 23, '89	0 84	Weather—some storms with rain; now cold. Sugarcane is being planted. *Rubbi* good, but slightly damaged by rain. Mango blossoms also damaged by rain.
	Deoghur ..	0 26	
	Jamtara ...	0 30	
	Pakur ...	0 60	
	Rajmahal ...	0 32	
ORISSA			
ORISSA DIVN.			
38	Cuttack Feb 22, '89	0 33	Weather—cool and fair *Sarad* and *rubbi* crops are being gathered. *Dalua* progressing well. Price of rice stationary.
39	Pooree „ 21, '89	0·15	Weather—seasonable. *Dalua* crop is thriving. *Rubbi* crops are doing well. Rain is wanted for *mung* crop. Common rice 19 seers 1 chittack per rupee in the Sudder sub-division and 15 seers 1 chittack in the Khoordah sub-division.
40	Balasore „ 22, '89	0 72	Weather—seasonable Rainfall of 19th was pretty general all over the district, and very beneficial.
CHOTA NAGPORE			
South-West Frontier Agency.			
CHOTA NAGPORE DIVN.			
41	Hazaribagh Feb 22, '89	0·78	Weather—cloudy and cold for the season. Weather unfavourable to *mahua*, mango and standing *rubbi*. Ploughing for early rice in progress. Lancing of poppy commenced. Prospects bright. Coarse rice selling at from 14 to 18 seers per rupee.
42	Lohardugga „ 23, '89	0 75	Weather—seasonable. Rain with hail. The rain will do some good to the standing *rubbi* crops. Land is being ploughed Prices stationary.
	Palamow ...	0 23	
43	Singbhoom „ 22, '89	0 33	Weather—seasonable There was rain one day in the week all over the district. *Rubbi* is being harvested; outturn 6 to 8 annas. Prices stationary.
44	Manbhoom „ 23, '89	0·57	Weather—cloudy, with occasional storms. The rain of the week will facilitate ploughing. Prospects of *rubbi* crops fair.
	Govindpur .	0 18

* Mean of six days.

Explanation.—Summary. The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years.

The humidity ... in ... express ... percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the ... determined from the returns sent in by the sub-divisional station for the period in question during the past 21 stations in the district ... returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

for the week ending Friday, the 22nd of February 1889.

DISTRICT OBSERVATIONS.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	Rainfall: Of week: Mean for district.	Of week: Normal mean.	Since 1st of month: Mean for district.	Since 1st of month: Normal mean.	Since 1st of month: Variation.	Since 15th May 1888: Mean for district.	Since 15th May 1888: Normal mean.	Since 15th May 1888: Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	District.	Meteorological Division.

The variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater.
denoting cloud amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall the normal means [illegible] years. The means of the district are the numerical average of the rainfall return received in the district, i.e., from total rainfall at the sub-divisional [illegible]

Statement of Rainfall in Bengal for the week ending Friday (6 p.m.), the 22nd of February 1889.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the 26th February* 1889.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 22ND FEBRUARY 1889.

THE week commenced in Bengal with fine weather everywhere; pressure and temperature were both high, and rising; winds were everywhere light, and generally north-westerly on the coast and in South Bengal, but south-westerly in the interior. There were, however, on the last day of the previous week distinct indications of the advance of a barometric depression over the North-West frontier, and on the 16th a well-formed depression covered Rajputana and part of Central India. The weather continued fine on Saturday in Bengal, and in most districts on Sunday, when the first symptoms of the depression approaching from Central India appeared in the west of the province, but the depression in its advance had become decidedly more diffused, and on this day it covered the greater part of the North-West Provinces and Central India. The barometer then fell over the whole of Bengal, and though humidity decreased in South Bengal, the skies were clouded in Behar and West Bengal, and light clouds appeared elsewhere. Rain fell in many parts of Behar on the 17th, some stations in the Patna and Gya districts reporting about an inch. Winds still remained light, but the direction was more generally northerly. The fall of pressure that commenced on the 17th continued nearly everywhere till Wednesday, the only exceptions being in Orissa and along the east coast of the Bay, where occasionally pressure rose slowly. The depression on approaching Bengal continued to become more diffused, and when it actually advanced over the province it to a considerable extent filled up. Hence, though the weather was unsettled and a considerable amount of rain fell during its passage over the province, the total fall of pressure during the four days, from Sunday to Wednesday, was not very large. On Monday, the 18th, rainfall became more general in the northern districts, but none fell in the south of the province, until the 19th, when fairly heavy rain commenced, which continued at many stations on the 20th. The rainfall on Tuesday, the 19th, was general all over the province; but, as it frequently accompanied thunderstorms, the falls were very irregular in amount, some stations receiving considerably more than an inch, and some none at all. The amounts were, however, usually between a fourth and half an inch. On the 20th, the distribution of the rainfall was very similar to that of the 19th, irregular and rather light, but general over the province. The diffused low-pressure area was on this day over East Bengal, where the fall of pressure amounted to about ·05 inch, and southerly winds accompanied the depression, though in the western districts a strong, north-westerly current had set in. The depression then advanced in an easterly direction, and disappeared from the province, and no rain fell after the 20th. The pressure then rose rapidly, and though the temperature changes were very irregular, fine weather became general over the province for the last two days of the week.

Pressure.—In the early part of the week pressure was very high, showing an excess in all districts of about a tenth of an inch. Though a considerable fall occurred during the passage of the low-pressure area between Sunday and Wednesday, the average pressure for the week is in most cases in excess of the normal, but the variations from the normal are slight and irregular at the various stations. On Saturday there was a general rise, and on Sunday a fall set in, which continued for four days. The fall was no where very rapid, and the largest total fall during that time did not exceed 0·2 inch. At most of the stations it varied between 0·1 inch and 0·15 inch. The fall was most rapid in North Behar on Sunday, and hence spread over the province. On Monday the changes were everywhere moderate. On Tuesday the most rapid fall was in North Bengal, and on Wednesday in East Bengal. The depression then left the province, and on Thursday a rapid rise took place everywhere, amounting to about a tenth of an inch in East Bengal. On Friday a slight variable fall occurred, without affecting the general conditions, and at this time pressure was nearly equal to the normal. For the whole week the average pressure for the province has been only about three thousandths of an inch above the normal, defects being registered in the north-west angle of the Bay, at Patna and in Chutia Nagpur, and slight excess pressures elsewhere.

Temperature—Variations from the normal show considerable diversity in different districts, and even at different stations in the same district. In South-West Bengal the mean for the week generally differs from the normal by less than a degree. In North-East and North Bengal there is an excess of about 4°. In other parts the variations are irregular, and in some cases large. At Chupra there is a defect of over 5°. In South-West Bengal the average for the district is almost normal, and the differences at the reporting stations vary between a defect of more than 2° at Calcutta to an excess of 2° at Raneegunge. The day temperatures have everywhere been in defect, and the night temperatures in excess, the excess in North Bengal being due entirely to the high temperatures during the night. The daily changes have been generally irregular. In the early part of the week there was a small rise, which continued for the first four days of the week. The only exception was in South Bengal, where a slight fall occurred on Sunday. On Wednesday there was a general fall, large in some cases, Calcutta and Burdwan having a fall of over 8°, and Dacca and Jessore one of more than 5°. On Thursday and Friday the changes were again irregular, but generally the temperature decreased. The general mean temperature of the province

for the whole week was nearly one degree above the normal.

The following table shows clearly the general distribution of temperature for the week, and its variation from the normal:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 22nd February 1889.

	Normal mean maximum temperature for the week ending 22nd February.	Actual mean maximum temperature for the week ending 22nd February 1889.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 22nd February.	Actual mean minimum temperature for the week ending 22nd February 1889.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 22nd February.	Actual mean daily temperature for the week ending 22nd February 1889.	Variation of actual mean from the normal.
Cuttack	90.2	90.3	+0.1	65.1	65.9	+0.8	77.7	78.1	+0.4

Darjeeling	48.2	48.6	+0.4	35.0	36.2	+1.2	41.6	42.4	+0.8

Rainfall.—Rain has been fairly general over the province during three days in connection with the depression which passed over Bengal during the early part of the week. It began in Behar on Sunday, and on Monday became general in the northern districts. On Tuesday and Wednesday the fall was general over the greater part of the province, and frequently accompained local thunderstorms. Hence the reports from different stations show considerable variety as to amount.

In Behar the general average fall has equalled about an inch, and in Orissa and South-West Bengal it has averaged about eight or nine tenths. In the remaining districts of East and North Bengal and Chutia Nagpur, the fall has equalled about four and five tenths. In all cases these falls represent amounts very considerably in excess of the normal for the period.

Taking up the district average rainfalls for the week, the following districts have received falls in excess of one and-a-half inches:—Midnapore and parts of 24-Pergunnahs and Patna; the following falls exceeding an inch:—Howrah, Hooghly, Julpigoree, Cooch Behar, Chumparun, South Bhagulpur, and Monghyr; and the following falls in excess of half an inch:—Bankoorah, Moorshedabad, Backergunge, Bogra, Durbhanga, Sarun, and Shahabad; while the smallest falls, and where the amounts do not average a tenth of an inch, have occurred in Mymensingh, Pubna and Purneah.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 22nd of February 1889:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1888.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, p passing temporary showers, t thunder, < lighting, ≡ fog, ⌂ dew, K thunderstorm.

The 25th February 1889.

A. PEDLER,
For Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

The number of deaths registered during the month of December 1888 in the districts of Bengal amounted to 166,117 among a population of 66,055,695, yielding a death-rate of 30 12 per 1,000, as opposed to 25 44 per 1,000 during the preceding month, and 26 28 per 1,000 during the corresponding month of 1887, showing, as compared with both the past periods, a considerable advance in the number of deaths recorded.

2. The highest proportions of deaths were returned from the following districts :—

Districts.	Ratio per *mille.*	*Districts.*	Ratio per *mille.*
Maldah	56·76	Murshedabad	35 16
Dinajpur	47·64	Rajshahye	33 60
Jessore	46·32	Dacca	33·60
Khulna	45·60	Hazaribagh	33·48
Backerganj...	44 40	Shahabad	33·24
Julpaiguri	43 44	Pubna	32·64
24-Pergunnahs	40 92	Hughli	32·16
Purneah	40·56	Tipperah	32 04
Rungpore	38 76	Birbhum	31·80
Noakhali	38·64	Serampore	31·20
Nuddea	38·40	Bogra	30 72
Howrah	36 60	Gya	30·60

3. Of the diseases mentioned below, it will be seen that cholera and fever prevailed with much greater severity in December 1888 than in the corresponding month of the preceding year, that bowel-complaints and injury exhibited no variations whatever, and that the death-rates under other heads manifested only fractional differences :—

	Ratio per *mille* during— December 1888.	December 1887.
Cholera	1·92	·81
Small-pox	·07	·03
Fever	22 56	20 52
Bowel-complaints	·84	·84
Injury	·12	·12
Other causes	4·44	3·72

4. The following districts returned the highest rates of deaths per 1,000 of population from the above-named diseases, excepting small-pox, bowel-complaints and injury, which did not appear to have prevailed with more than ordinary severity anywhere :—

Cholera.	Ratio per *mille.*
Maldah	14·16
Nuddea	8·16
Jessore	8·04
Backerganj	7·68
Khulna	7·08
24-Pergunnahs... ...	6·84
Howrah	4·80
Dacca	4·44
Murshedabad	4·08
Faridpore	3·84
Rajshahye	3·00
Serampore	2·04

Fever.	Ratio per *mille.*
Dinajpur	44·16
Julpaiguri	41·28
Maldah	40 32
Purneah	37·92
Rungpore	36·24
Jessore	35·40
Noakhali	31 80
Khulna	31·32
Hazaribagh	29 52
Pubna	29·28
Rajshahye	28·68
Murshedabad	28·44
Shahabad	27·84
24-Pergunnahs ...	26 64
Gya	26 64
Nuddea	26·28
Bogra	24·96
Monghyr	23·28
Birbhum	23·04
Darjiling	23 04
Hughli	21·96
Backerganj	21·84
Bhagulpore	21·60
Faridpore	20·64
Midnapore	20·52
Dacca	20·16

Other causes.	Ratio per *mille.*
Puri	18·84
Backerganj	14 04
Tipperah	9 72
Sarun	9 00

5. The mortality of the month under the heads of *Sex*, *Class* and *Age* stood as indicated below :—

According to Sex.	Ratio per *mille.*
Males	31·92
Females	28·44
Ratio of male deaths to every 100 female deaths	110

According to Class.	Ratio per *mille.*
Christians	21·48
Hindus	28·32
Mahomedans... ...	34 56
Buddhists	13 68
Other classes ...	20·04

According to Age.	Ratio per *mille.*

OFFICE OF SANITARY COMMISSIONER FOR BENGAL,

The 23rd February 1889.

W. H. GREGG, *Dy. Publ Health, Camb.,*

Sanitary Commissioner for Bengal.

MEMORANDUM.

During the week ending 9th February 1889, the principal Municipalities in Bengal returned a birth and death-rate of 21·9 and 23·9 per 1 000 of population, respectively, against 21· and 22·8 per 1,000 in the preceding week ending 2nd February, indicating an improvement in the registration of both events.

2. The following Municipalities returned the highest proportions of births and deaths :—

Births.

	Ratio per mille.
Durbhanga	40·1
Monghyr	38 0
Jessore	36 7
Purneah	34 6
Rampore Beauleah	34 2
Puri	31·5
Comillah	30 8
Bhagulpore	29·9

Deaths.

	Ratio per mille.
Darjiling	45·6
Suburbs of Calcutta	45·1
Serampore	41·2
Purneah	38 1
Bali	31·6
Rampore Beauleah	31·5

3. The mortality from the undermentioned diseases stood as follows in contrast with similar information for the preceding week :—

	Ratio per mille during the weeks ending— 9th Feb. 1889.	2nd Feb. 1889.
Cholera	2·8	3·3
Small-pox	·2	·3
Fever	9 5	8 7
Bowel-complaints	2 9	4 0
Injury	·5	·5
Other causes	8 0	6 0

It will be seen that there was a comparatively large increase in the death-rates from Fever and "Other causes," and a sensible decrease in the mortality recorded under the head Bowel-complaints.

4. The Municipalities noted below returned the highest death-rates from Cholera, Fever, and the maladies coming under the head of "Other causes." The other diseases mentioned in the foregoing table exhibiting no special severity anywhere :—

Cholera.

	Ratio per mille.
Bali ..	17·5
Suburbs of Calcutta ...	9 5
Howrah ...	6·7

Fevers.

	Ratio per mille.
Darjiling	39 1
Rampore Beauleah ...	21·0

* A special census of the Europeans in the Darjiling Municipality was recently taken as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the na[illegible] remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "Age," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

Comparative Statement of the principal commodities carried during the month of November 1888.

INCREASES.

	Tons.
Coal	2,340
For Railway and Flotilla purposes, also for Messrs. Burn & Co.	
Rice	642
The increase is principally from the Northern Section, Parbatipur and Dinagepur shewing a very great improvement.	
Oil-seeds	338
A good business done in Calcutta during the week ending 20th November 1888.	

DECREASES.

The decreases under the several heads aggregate 30,587 tons. They are, however, fictitious owing to the fact that the comparison is of the figures for 4 weeks of 1888 as against 5 weeks in 1887.

Calcutta, the 18*th February* 1889.

F. P. QUINLAN, *Examiner of Accounts.*

Total	3,427	3,639	3,208	5,203	7,066	8,411	1,284	2,6[illegible]9

Comparative Statement of the principal commodities carried over the Bengal Central Railway during the month of November 1888.

INCREASES.

	Tons
Coal ...	1,189

For railway and Flotilla purposes.

DECREASES.

Rice ...	116

The decreases are principally from Bongong and Khulna, but Singia, Nawapara and Jessore shew small decreases, said to be due to drought.

Jute ...	558

This decrease is due only to the fact that the figures for disproportionate periods are compared, as Khulna during the month shews an increase under this head of over 2,600 tons, and the other stations on the railway also shew considerable improvements.

Metals ...	168

Ordinary fluctuations of traffic.

Betelnuts ...	690

The procedure referred to in the note under jute vitiates this comparison also, but there was a serious falling off in betelnuts from the Bengal Central Flotilla—about 250 tons.

Railway plant, &c. ...	447

Due presumably to the fact that there were less repairs and renewals during the month.

CALCUTTA, *the 18th February* 1889. F. P. QUINLAN, *Examiner of Accounts.*

INCREASE.

	Tons.
Coal	259

This increase is due to greater import of brick-burning coal.

Cotton piece-goods—

(1) European	21

This increase is due to steamer service between Jeaganj and Calcutta being closed.

Jute—

(1) Raw	32

This increase is due to the river communication between Jeaganj and Calcutta having been stopped and this traffic carried by rail this year.

Grains—

(5) Others	33

This increase is due to greater demand.

Metals—

(2) Iron	27

This increase is due to greater demand.

Oils—

(3) Others	10

The increase under this head is due to high market rate.

Salt	16

This increase is due to river communication between Jeaganj and Calcutta being stopped.

Oilseeds—

(1) Linseed	16

This is due to steamer service between Jeagunge and Calcutta being stopped.

Mustard and rape	87

This increase is due to greater import owing to high local market rate.

DECREASE.

Jute—

(2) Gunny bags and cloths	39

This decrease is due to less export from intermediate stations this year.

Grains—

(2) Rice	855

The decrease under this head is due to less export from intermediate stations, as the cultivators are waiting for a better rate.

Railway plant and rolling-stock	33

This is due to less materials carried during the month.

Oilseeds—

(6) Others	14

The decrease under this head is due to less import of guja seed.

Sugar—

Undrained	15

This decrease is due to less import for dull market.

The 23rd February 1889.

R. G. MOOKERJEE, *Manager, Nalhati State Railway.*

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 2nd March 1889.

Division	No.	District and date of return		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.					
		Western Districts.			
BURDWAN DIVN.	1	Burdwan	Mar. 2, '89	Nil	Weather—seasonable. *Rubbi* and sugarcane harvests are yielding almost an average outturn. Prices of common rice fluctuate, the tendency being still towards a fall.
	2	Baukoora	„ 2, '89	Nil	Weather—getting warmer. Harvesting of *rubbi* crops has commenced; average outturn 8 annas. Prices have slightly risen.
	3	Birbhum	„ 2, '89	.....	Weather—much warmer up to last night. The rain of last night and this morning will facilitate ploughing.
	4	Midnapur	„ 2, '89	Nil	Weather—getting warmer. Prospects of crops promising owing to the late rain.
	5	Hugli	„ 2, '89	Nil	Weather—daily getting warmer. *Rubbi* crops are being harvested; outturn fair
		Howrah	„ 4, '89	0·54	Weather—getting hot: two nor'-westers. State and prospects of crops good.
		Central Districts.			
PRESIDENCY DIVN.	6	24-Perghs.	Mar. 5, '89	0·27	Weather—warm and cloudy with a nor' wester at end of week. Prospects of crops fair. Ploughing continues. Harvesting of *rubbi* crops is all but over.
	7	Nuddea	„ 2, '89	Nil	Weather—seasonable. Outturn of spring crops expected to be fair. Earlier crops are being harvested. Ploughing for *aus* paddy going on.
	8	Khoolna	„ 2, '89	0·37	Weather—cold and seasonable. *Boro* and *rubbi* crops doing well.
	9	Jessore	„ 2, '89	0·70	Weather—getting warm. Ploughing of rice lands going on in places. *Rubbi* crops doing well.
	10	Moorshedabad	„ 2, '89	......	Weather—bright and cool up to the 1st evening. Rainy and cloudy from last night. Lands are being prepared for *aus dhan*. Harvesting of *rubbi* commenced.
RAJSHAHYE DIVN.	11	Dinagepur	„ 2, '89	...	Weather—growing warmer. A shower last night (1st March). Prospects of crops on the ground good. Fields being prepared for *bhadoi* sowings.
	12	Rajshahye	„ 2, '89	Nil	Weather—seasonable. Condition of spring crops fair. Rice sells at 15¼ seers per rupee. Ganja being manufactured.
	13	Rungpur	„ 2, '89	Nil	Weather—unusually warm. Rain threatens. The cold-weather crops are fairly good. Tobacco will give splendid results. Sugarcane is being crushed. Paddy sowings actively progressing.
		Kurigram	...	0·09	
	14	Bogra	„ 2, '89	Nil	Weather—seasonable. Spring crops are promising. Sugarcane is being cut and crushed. Land is being ploughed for early sowings. Common rice selling at 21 seers per rupee.
	15	Pubna	„ 2, '89	Nil	Weather—cloudy at close of week. *Rubbi* crops poor in Sudder sub-division. Sugarcane being planted.
	16	Darjeeling	„ 2, '89	0·08	Weather—getting daily warmer. State of crops satisfactory.
	17	Julpigoree	„ 2, '89	Nil	Weather—getting warm daily. Ploughing for *bhadoi* in progress. Sugarcane is being cut and crushed. Winter crops doing well. Prices stationary.
		Eastern Districts.			
DACCA DIVN.	18	Dacca	Mar. 2, '89	Nil	Weather—days hot and nights cool and fine. Pulses are being gathered. Mustard has nearly been reaped. *Boro* paddy thriving. Ploughing for *aus* and *amun* paddy continues. Prospects of crops generally good. Rain is wanted.
	19	Furreedpur	„ 2, '89	Nil	Weather—cloudy and warm. Prospects of crops favourable.
	20	Backergunge	Feb. 28, '89	Nil	Weather—seasonable. Prospects of crops good.
	21	Mymensingh	Mar. 1, '89	Nil	Weather—getting hot. Prospects of crops good.
CHITTAGONG DIVN.	22	Chittagong	„ 5, '89	0·10	Weather—hot. Winter crops thriving. Prices steady.
	23	Noakholly	„ 1, '89	Nil	Weather—seasonable. *Rubbi* crops are being harvested. Preparation of soil for *aus* crops continues.
	24	Tipperah	Feb. 28, '89	Nil	Weather—seasonable. Cold-weather crops are giving a fair yield. Ploughing for the rain crops is in full progress.
		Brahmanberiah	...	0·6	
	25	Chittagong Hill Tracts.	„ 26, '89	0·97	Weather—cool at night and hot during day. *Jum* cutting continues. *Chillies* and tabacco doing well.
		Hill Tipperah	„ 28, '89	Nil	Weather—warm and windy. *Jum* cutting still continues. No important crop in the fields.

	No.	District and date of return.*		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.					
PATNA DIVN.	26	Patna	Mar. 2, '89	0 11	Weather—seasonable. Prospects of *rubbi* and poppy not so good as when last reported owing to recent rain, but fair harvest still expected. Gathering of *mussoor* and gram in progress, and cutting of wheat begun. Prices stationary.
	27	Gya	" 2, '89	0 80	Weather—cloudy and hot, bad for the *rubbi* and poppy crops. The heavy rain and strong wind of last night have done serious damage to the *rubbi* crops in general. The damage done up to date by the successive falls of rain and hail is estimated at 6 annas in the cereals and 8 annas in poppy.
	28	Shahabad	" 2, '89	0 12	Weather—warmer. Prospects of *rubbi* and poppy crops fair. Prices stationary.
	29	Durbhunga Madhubani	" 3, '89	0 09 0 05	Weather—occasionally cloudy. In south linseed yield expected 12 annas; *rubbi* and tobacco being harvested; prices falling. In centre prices almost stationary with a tightening tendency; *rubbi* very good. In Madhubani poppy and *rahar* damaged by rain, otherwise crop prospects unchanged. Pressure reported to be deepening in extreme north-west.
	30	Mozufferpur Hajipur Sitamarhi	" 2, '89	0·20 0 01 0 07	Weather—warmer with west wind. *Cheena, mung* and *dhan* are being sown and germinating well. Indigo is also being sown. Generally a good crop of mustard is being harvested. Poppy good in north; not improved by rain in south.
	31	Sarun Sewan	" 2, '89	0 34 0 12	Weather—very unsettled. Thunderstorms and some hail. Prospects of indigo good. Sowings rather interfered with by rain. Poppy rather damaged by rain and hail. *Rubbi* still very good from 12 to 14 annas.
	32	Chumparun Bettiah	" 2, '89	0·11 0 4	Weather unsettled. Prospects of standing *rubbi* and poppy good. Estimated outturn in Bettiah sub-division 16 annas. Mango trees in full blossom. Extraction of opium going on. More rain would do harm.
BHAGULPORE DIVN.	33	Monghyr	" 2, '89	..	Weather—getting warmer gradually. Some storms with slight rain on the night of the 1st. Standing crops doing well, but the storms have caused some damage. Peas, mustard, linseed and *mussoori* are being reaped.
	34	Bhagulpur Madhepurah	" 2, '89	0 03 0·02	Weather—warmer, storm and slight rain yesterday (1st). Standing crops have suffered from the unseasonable rain, and outturn will probably fall below expectations, especially to the east. Harvesting of peas and other early crops continues in places.
	35	Purneah	" 2, '89	Nil	Weather—seasonable, though rather cloudy for the time of year. Prospects of *rubbi* continue to be favourable. Ploughing for the *aus* crop has commenced.
	36	Maldah Chanchal	" 2, '89 ...	Nil 0 02	Weather—generally clear; days warmer, nights still cold. Transplanting of *boro* paddy progressing. *Rubbi* crops are good, except in thanas English Bazar, Kalia hak, Kharba and Manickchak outpost, where much damage was done by the hailstorm of the 30th January.
	37	Sonthal Pergunnahs	" 2, '89	0 19	Weather cloudy; getting warmer daily. Prospects of standing *rubbi* crops continue fair. Mangoe blossoms damaged by rain and hail.
ORISSA.					
ORISSA DIVN.	38	Cuttack	" 1, '89	Nil	Weather—fair and seasonable. *Sarad* and *rubbi* crops are being gathered. Prospects of standing crops continue fair. Common rice sells at 17 seers 1 chittack per rupee in town.
	39	Pooree Khoorda	Feb. 28, '89	Nil 0 10	Weather—seasonable. Land is being ploughed. *Dalua* crop is in ear. *Rubbi* is being gathered. Common rice 18 seers 11 chittacks, per rupee in the Sudder sub-division and 15 seers 1 chittack in the Khoorda sub-division.
	40	Balasore	" 1, '89	Nil	Weather—seasonable. Ploughing of lands for rice crop has commenced. More rain would be welcome.
CHOTA NAGPORE.					
South-West Frontier Agency.					
CHOTA NAGPORE DIVN.	41	Hazaribagh	Mar 1, '89	Nil	Weather—cloudy occasionally; unusually cool. The recent rain has somewhat improved the prospects of *rubbi*, 6 to 8 annas outturn expected. Rice lands are being ploughed. Poppy is being lanced; the crop is very good. Rice is selling at from 15 to 18 seers per rupee.
	42	Lohardugga	" 2, '89	Slight rain.	Weather—cloudy. More rain is expected. Land is being prepared for sowing of early paddy. Prices as before.
	43	Singbhoom	" 1, '89	Nil	Weather—hot and dry. Gathering of *rubbi* crop continues; very little crop left on the ground. Prices stationary.
	44	Manbhoom	" 2, '89	..	Weather—stormy, with clouds. The rain of yesterday (1st) will improve the *rubbi*, and facilitate ploughing and planting out of sugarcane. *Mohwa* is beginning to fall. Prices stationary.

Published for general information.

CALCUTTA; REVENUE DEPT.,
The 5th March 1889.

P. NOLAN,
Secy to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of February 1889.

	Inches.	Date.	Hour
The mean pressure of the month	29 995		
The average pressure of February from 24 years' registers ...	29·945		
The highest pressure in the month	30·152	14th	10h.
The lowest pressure in the month	29·878	19th	16h.
The range of pressure	0·274		
	Hours.		
The total number of hours of bright sunshine during the month	264·0		
The maximum possible number of hours of sunshine ...	318·0		
	⊖		
The mean temperature of the month	69·5		
The average temperature of February from 24 years' registers	73 0		
The highest temperature in the month	87·3	28th.	
The lowest temperature in the month	49 6	6th.	
The range of temperature during the month	37·7		
The mean daily range of temperature	20·9		
The greatest range of temperature in one day	26·6	10th.	
	Per cent.		
The mean humidity of the month	70		
The average humidity of February from 24 years' registers ...	67		
	Inches.		
The mean vapour tension of the month	0·495		
The average vapour tension of February from 9 years' registers	0·538		
The mean cloud proportion of the month	1 42		
The average cloud proportion of February from 12 years' registers	1·84		
	Inches.		
The total rainfall of the month	2·46		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the guage about 52 feet above the ground)	2·39		
The average fall of February from 48 years' registers ...	0·87		
The greatest fall in 24 hours	0·90	19th.	
	Days.		
The number of rainy days in the month	4		
The average number of rainy days in February from 24 years' registers	3		
	⊖		
The mean maximum equilibrium temperature of solar radiation during the month	135·4		
The mean difference of sun and air temperatures	55·4		
The greatest sun temperature	141·8	23rd.	
The greatest excess of sun over air temperature	64·8	4th.	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	52 2		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	7·2		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	10 4	4th.	
	Miles.		
The mean movement of the wind per day	48·5		
The greatest movement of the wind in one day	108·0	4th.	
The greatest movement of the wind in one hour	11·0	19th Noon to 1 P.M.	

The number of hours with winds from each of the 8 points—

N. 104, NE. 35, E. 16, SE. 20, S. 18, SW. 74, W. 80, NW. 91, Calm 234.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park-street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 2·1° lower; and finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

A. PEDLER,

* Mean of six days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years. The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 21 stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

for the week ending Friday, the 1st of March 1889.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. RAINFALL. Of week. Mean for district.	Of week. Normal mean.	Since 1st of February. Mean for district.	Since 1st of February. Normal mean.	Since 1st of February. Variation.	Since 15th May 1888. Mean for district.	Since 15th May 1888. Normal mean.	Since 15th May 1888. Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	DISTRICT.	METEOROLOGICAL DIVISION.

CALCUTTA, *the 5th March* 1889.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 1st MARCH 1889.

Weather at the close of the previous week in Bengal was fine, and of the usual character which marks the end of the cold season and the gradually commencement of the hot-weather conditions Light and rather variable winds, alternating sometimes between north and south, prevailed, but weather was fine and rainless over the whole province. At this time there was, however, a very deep barometric depression lying over the Scind frontier, and on the 23rd, or the first day of the present week, the depression increased decidedly in intensity. On the 24th the very powerful depression had moved to the Punjab, and on the 25th it had either filled up or passed away in an easterly direction across the hills. The weather was during this period very much disturbed over the whole of Northern India, and though the depression was far removed from the province of Bengal, yet on the 25th the disturbed conditions even reached as far as North Behar in a modified form, and rain showers were received in the districts of Durbhunga, Mozufferpore, Chumparun, and Sarun. These disturbed conditions, however, rapidly disappeared, and weather again became fine over the whole province, and there were no further changes of importance until quite the close of the week. On February 28th the barometric changes occurring over the province, though small, were decidedly irregular, showing apparently that disturbed conditions were again commencing. On March 1st the irregular barometric changes continued in Bengal and over Central India, and a distinct but shallow barometric depression was formed which stretched from the Central Provinces across to Upper Scind. Here, again, on this day, though the actual depression did not reach Bengal and Behar, a few showers of rain commenced to fall over Behar, but in the majority of cases the amounts were very small. During the week very light winds have generally been reported, and there has at the southern stations been a tendency to the setting in of southerly winds and for several days, particularly during the first half of the week, southerly winds, were reported in South Bengal. With the setting in of southerly winds, temperature and humidity increased rapidly during the first half of the week, though when northerly winds again set in during the second half of the week, temperature and humidity decidedly fell. On the whole, however, there has been a decided increase in temperature during the week througout the province. It will thus be seen that the week under review has again been one in which the transition conditions between the cold and hot seasons have been strongly marked.

Pressure.—The pressure oscillations during the week have had a decided upward tendency, and though the mean pressure of the province for the previous week had been almost absolutely normal, the average pressure for the present week has been about 0·05 inch in excess of the normal. This excess pressure is also fairly equally distributed over the province.

Temperature.—The principal point to be noted in the temperature changes during the week has been the steady increase which has taken place. Thus the average of the mean daily temperature of the various stations in the province for the week ending March 22nd was 69°, for the present week the average shows 73°; or there has been an average increase in the mean temperature of 4° during the week. For the present week the general average temperature has been slightly in excess of the normal, the mean excess showing about 0 7°

The following table will show the general range of temperature throughout the province during the week. The table gives the average maximum, minimum and mean temperatures at nine typical stations in the province for the week and their variation from the normal mean of the period:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 1st March 1889.

	Normal mean maximum temperature for the week ending 1st March.	Actual mean maximum temperature for the week ending 1st March 1889	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 1st March.	Actual mean minimum temperature for the week ending 1st March 1889	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 1st March.	Actual mean daily temperature for the week ending 1st March 1889.	Variation of actual mean from the normal.

Rainfall.—Except for the few showers in Behar alluded to previously, the whole province has been practically rainless throughout the week. Even in Behar the average fall has been less than a tenth of an inch, and hence it is of no practical importance.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 1st of March 1889:—

Meteorological Divisions.	Temperature						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week			Rainy days.			Since 1st of February.		Since 15th May 1888.

The average fall of the corresponding period for 24 years, S. G.'s Office ..	1·72

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, p passing temporary showers, t thunder, < lighting, △ dew, / strong wind

MEMORANDUM.

THE birth and death returns of the principal Municipalities in Bengal yielded the following results for the week ending 16th February 1889 :—

1. The ratios per mille of births and deaths for the period above referred to stand at—for births 23· and for deaths 24·8, the records of the preceding week ending 9th February presenting 21·9 and 23 9 respectively; there was thus an improvement in the registration of both births and deaths.

2. In the following Municipalities births and deaths were recorded at the highest rates :—

Births.

	Ratio per *mille.*
Naraingaaj	53·8
Hughli	45·7
Puri	44·1
Santipore	42·0
Rampore Beauleah	39·4
Utterpara	37 ?
Serampore	37 3
Monghyr	37·1
Jessore	36 7
Kishnaghur	34·1
Comillah	30·8
Durbhanga	30·7

Deaths.

	Ratio per *mille.*
Naraingunj	53 8
Suburbs of Calcutta	46·3
Burdwan	41 2
Puri	37 8
Comillah	34 7
Serampore	31 4

3. In comparison with the results of the preceding week, bowel-complaints alone exhibited noticeable increase of mortality Small-pox and injury presented no variations, and the fatal results from the other diseases showed only fractional differences, *vide* figures quoted below :—

	Ratio per *mille* during the weeks ending— 16th Feb. 1889.	9th Feb. 1889.
Cholera	3 2	2 8
Small-pox	·2	·2
Fever	8 8	9 5
Bowel-complaints	4 2	2 9
Injury	·5	·5
Other causes	7 9	8·0

4. Of the diseases mentioned in the foregoing table, cholera, fever, bowel complaints and the maladies coming under the head of "Other causes" are reported to have been conspicuously fatal in the following Municipalities :—

Cholera.

	Ratio per *mille.*
Naraingunj ...	20·7
Suburbs of Calcutta ...	9·9
Howrah ...	8·6

Fever.

	Ratio per *mille.*
Comillah ...	23 1
Purneah ...	20·8

Bowel-complaints.

	Ratio per *mille.*
Naraingunj ...	12·4
Hughli ...	10 7
Suburbs of Calcutta ...	10·1

Other causes.

	Ratio per *mille.*
Puri ..	21 0
Serampore ...	19 6
Burdwan .	13·7
Bhagulpore ...	10 9
Monghyr ...	10 8
Suburbs of Calcutta ...	10·5
Santipore ...	10 5

5. The mortality referable to *Sex, Class* and *Age* stood as exhibited below :—

According to Sex.

	Ratio per *mille.*
Males	27·7
Females	21·5
Ratio of male deaths to every 100 female deaths	146

According to Class.

	Ratio per *mille.*
Christians	34 8
Hindus	25·7
Mahomedans ...	22·6

According to Age.

	Ratio per *mille.*
Under 1 year ...	192·1
1 and under 5 years ...	26·5
5 „ 10 „ ...	8·3
10 „ 15 „ ...	7·7
15 „ 20 „ ...	12 0
20 „ 30 „ ...	17·5
30 „ 40 „ ...	18·7
40 „ 50 „ ...	19·8
50 „ 60 „ ...	29·5
60 years and upwards ...	73 0

W. H. GREGG, *Dip. Publ. Health, Camb.,*
Sanitary Commissioner for Bengal.

The 4th March 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table except "Age," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been [illegible] under the authorized form of age classification.

Districts.	Names of Municipalities.	13. Mortality according to Class — Deaths among — Christians.	Hindus.	Mahomedans.	Buddhists.	Other classes.	14. Class — Ratio per 1,000 of population per annum — Christians.	Hindus.	Mahomedans.	Buddhists.	Other classes.	15. Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 9th March 1889.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL			
	Western Districts.		
Burdwan Divn.			
1	Burdwan Mar. 9, '89	0·16	Weather—seasonable. *Rubbi* and sugarcane are very nearly average crops. Potato crop is above average. Prices have suddenly risen at Burdwan, but are stationary elsewhere.
	Culna ..	0·31	
	Raneegunge	0·18	
2	Bankoora „ 9, '89	0·57	Weather—hot. Harvesting of *rubbi* proceeds; average outturn 8 annas. Fields are being ploughed for the next rice. Prices have fallen.
3	Birbhum „ 9, '89	0·53	Weather—fairly cool, especially at night and morning. Crop prospects good. Ploughing going on vigorously at Rampore Hât. Sugarcane harvest about 12 annas. *Rubbi* not yet gathered in.
	Rampur Hât .	1·59	
4	Midnapur „ 9, '89	Nil	Weather—warm. *Boro* thriving.
5	Hugli „ 9, '89	Nil	Weather—hot during day, but cool at morning and night. Prospects of *rubbi* crops and *boro* paddy good.
	Serampur	0·29	
	Jehanabad	0·47	
	Howrah „ 11, '89	Nil	Weather—seasonable. State and prospects of crops good
	Central Districts.		
Presidency Divn.			
6	24-Perghs. Mar 12, '89	Nil	Weather—fairly cool most of week, but now hot. Harvesting of *rubbi* is about over. Manufacture of sugar continues. Ploughing is progressing
7	Nuddea „ 9, '89	Nil	Weather—hot in day, cool at night. Harvesting of sugarcane nearly completed, and that of wheat, barley, gram, &c., going on. Outturn fair. Ploughing for *aus* crop going on favourably.
	Meherpore ...	2·21	
	Chooadanga ...	0·05	
	Ranaghat ...	0·14	
8	Khoolna „ 9, '89	Nil	Weather—seasonable. Harvesting of *rubbi* crops has commenced. *Boro* paddy is doing well
9	Jessore „ 9, '89	0·03	Weather—days hot and nights cool. Ploughing of rice lands going on. Wheat and barley nearly ripe. Linseed is being cut.
	Jhenidah	0·15	
	Magoora	0·11	
	Narail ...	0·56	
	Bongong	0·15	
10	Moorshedabad „ 9, '89	0·27	Weather—days getting warm, mornings fine and cool. Harvesting of *rubbi* crops has commenced. Lands are being prepared for *bhadoi*.
	Lalbagh ...	0·19	
	Jangipur .	0·6	
Rajshahye Divn.			
11	Dinagepur „ 9, '89	Nil	Weather—getting very warm during the day, but nights still cold. Prospects of sugarcane good. Price of rice unaltered. Ploughing continues.
12	Rajshahye „ 9, '89	0·06	Weather—seasonable. Spring crops and sugarcane are being reaped. Rice sells at 16½ seers per rupee
13	Rungpur „ 9, '89	Nil	Weather—still very cool, especially at nights and in the early mornings. Early rice and Indian-corn are being sown. *Kalai* and tobacco are being got in. Prospects excellent.
14	Bogra „ 9, '89	0·08	Weather—seasonable. Standing crops are promising. Ploughing is going on. *Aus* rice is being sown in some places. Common rice is selling at 21 seers per rupee.
	Sherpore ...	0·03	
15	Pubna „ 9, '89	0·04	Weather—warm. *Rubbi* crops fair in Serajgunge sub-division. Outturn bad in Sudder sub-division.
16	Darjeeling „ 9, '89	Nil	Weather—fine day; rain wanted. Crops doing well.
17	Julpigoree „ 9, '89	Nil	Weather—days hot and nights cool. Ploughing for *bhadoi* continues. Prospects of winter crops good. Common rice sells at 17 seers per rupee in town.
	Eastern Districts.		
Dacca Divn.			
18	Dacca Mar. 9, '89	Nil	Weather—getting warmer and fine. Pulses are being gathered. Cultivation for early rice is going on. *Boro* paddy thriving. Prospects continue favourable, but rain is wanted.
	Munshigunge ...	0·4	
19	Furreedpur „ 9, '89	Nil	Weather—getting warmer. Prospects of crops fair. Outturn of *rubbi* crops in Sudder will be below the average.
	Madaripur ...	0·16	
20	Backergunge „ 8, '89	0·33	Weather—cool at night and morning; hot during the day. Prospects of crops fair. Rain has done good to *rubbi* crops.
21	Mymensingh „ 8, '89	Nil	Weather—days hot, nights cool. Prospects of crops good.
Chittagong Divn.			
22	Chittagong „ 12, '89	Nil	Weather—hot. Rain wanted. Winter crops thriving. Prices rising.
23	Noakholly „ 8, '89	Nil	Weather—seasonable. Harvesting of *rubbi* crops going on. Soil for *aus* crop is being cultivated.
	Fenny ...	0·75	
24	Tipperah „ 7, '89	Nil	Weather—seasonable. State and prospects of crops satisfactory.
	Chandpur ...	0·30	
25	Chittagong Hill Tracts. „ 6, '89	0·12	Weather—still cold at night with cool mornings, but hot during the day. *Jum* cutting still continues. Chillies and tobacco doing well. Late rain has improved the condition of these crops to some extent, and prospects are fairly good
	Hill Tipperah „ 7, '89	Nil	Weather—days hot and nights cool. *Jum* cutting nearly over. Chillies doing well. Rain much wanted.

No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.				
Patna Divn.				
26	Patna Barh Dinapur	Mar. 9, '89	Nil 0·20 0·33	Weather—bright and getting hot. Prospects of *rubbi* generally favourable, but not good in Behar. Mustard, gram and *mussoor* are nearly harvested, and wheat is being cut. The weather has been unfavourable to the poppy crop.
27	Gya	„ 9, '89	Nil	Weather—seasonable. Harvesting of *rubbi* crops has commenced. Opium is being extracted.
28	Shahabad Sasseram	„ 9, '89 . .	Nil 1·22	Weather—hot with west wind. Harvesting of pulses continues with fair outturn. Prospects of other *rubbi* crops generally good, though some further damage has been caused by a storm in the Sasseram sub-division. Opium prospects generally good, though the crop has been damaged in many villages by storms.
29	Durbhunga	...		Report not received.
30	Mozufferpur Hajipur Sitamarhi	„ 9, '89	0·07 0·10 0·03	Weather—clear and warm. Mustard and peas are being harvested. Opium collection going on. General *rubbi* prospects good. *Cheena* and *mung* are germinating well. Indigo and *kodo* sowings in progress.
31	Sarun Sewan	„ 9, '89	Nil 0·25	Weather—fair; getting hot. Prospects of *rubbi* crops continue good. Poppy slightly damaged. Sugarcane planting in progress. Harvesting of linseed and peas has commenced.
32	Chumparun	9, '89	Nil	Weather—bright and warm; west wind prevailing. *Rubbi* crops ripening, and harvesting going on. Opium collection progressing, and the produce is being housed. *Cheena* coming on well. Mango blossoms give good promise. Prices rather stationary.
Bhagulpore Divn.				
33	Monghyr	„ 9, '89	0·10	Weather—bright and getting hot. Prospects of standing crops continue fair. Peas, mustard, linseed and *mussoori* are being gathered.
34	Bhagulpur	„ 9, '89	Nil	Weather—seasonable, cool at night. Standing crops are doing well, and are nearly ripe. *Mohua* prospects hopeful. *Cheena* and *boro dhan* are being sown and sugarcane planted. Peas, *mussoor*, linseed and *khesari* are being reaped in places.
35	Purneah	„ 9, '89	0·01	Weather—clear and hot for time of year. *Rubbi* being harvested, outturn about 12 or 14 annas. Ploughing for *bhadoi* commenced.
36	Maldah Chanchal Shibgunge	„ 9, '89	Nil 0 03 0 05	Weather getting warm. Standing *rubbi* crops are ripening. Nothing can yet be said regarding the prospects of *boro*, which is still being planted.
37	Sonthal Perghs Deoghur Jamtara	„ 9, '89	Nil 0 17 0·55	Weather—dry with west winds. Sugarcane doing well. Prospects of *rubbi* outturn about 10 annas. *Rahar* is being harvested in Godda.
ORISSA.				
Orissa Divn.				
38	Cuttack	„ 8, '89	Nil	Weather—seasonable; mornings foggy. Gathering of *rubbi* crops is over. Prospects of standing crops fair. Price of rice stationary.
39	Pooree Khoorda	„ 7, '89	Nil 0·07	Weather—seasonable. *Dalua* crop is in ear. *Mung* crop in flower. Lands are being ploughed for the ensuing *sarad* crops. Mango crop is poor. Common rice 18 seers 9 chittacks per rupee in the Sudder sub-division and 15 seers 9 chittacks in Khoorda.
40	Balasore	„ 8, '89	Nil	Weather—decidedly warmer. *Dalua* rice in flower. Rain much wanted for cultivation.
CHOTA NAGPORE.				
South-West Frontier Agency.				
Chota Nagpore Divn.				
41	Hazaribagh	Mar 8, '89	Nil	Weather—seasonable. *Rubbi* crops are being harvested in places; outturn from 6 to 8 annas. Rice lands are still being ploughed. No report received regarding poppy. Prices stationary.
42	Lohardugga Palamow	„ 9, '89 ...	0 13 0 48	Weather—warm. Some rain during the week. Prospects of *rubbi*, *mohua* and mango are reported to be very gloomy in Palamow owing to wet and cloudy weather. Prices stationary.
43	Singbhoom	„ 8, '89	0 32	Weather hot in day, cool at night. Rain on 3rd instant. *Rubbi* crops are being gathered, outturn 8 to 10 annas. Prices stationary.
44	Manbhoom Govindpur	„ 9, '89	0·19 0·47	Weather—hot, with clouds. *Rubbi* being gathered; outturn varies from 8 to 12 annas. Recent rain has injured the *mohua* crop. Prices stationary.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF FEBRUARY 1889.

THE normal meteorological conditions obtaining in Bengal during February are to a considerable extent similar to those of January; but during February, and particularly towards its close, the transition period between the cold and hot season commences to make itself felt. One of the most important features of February is undoubtedly the rather rapid increase of temperature which commences in this month and which continues during the following two or three months. This increase is due to the rapidly increasing elevation of the sun, and this heating effect is much more pronounced over the land area than over the sea, so that the dry northerly winds at the southern stations commence to be replaced by moist southerly winds blowing from the sea. The normal conditions in February are therefore comparatively simple. Winds continue generally northerly and north-westerly, except at the southern stations. The sky is clear, and unless conditions are changed by the occurrence of storms, no rain falls. Pressure remains high, while temperature steadily rises, though the night temperatures usually remain fairly low. Humidity also continues low over the greater part of the province except at the southern stations, where the southerly winds set in when rapid and large changes in humidity occur. These normal conditions are, however, liable to be disturbed by the formation or advance of barometric depressions or storms over Northern and Central India which drift eastwards and soutwards, giving heavily-clouded skies, a moist atmosphere and rain to Bengal and Behar, the rainfall during such storms being generally fairly well distributed. Occasionally also by the interaction of the moist sea winds with the dry land breezes, local storms, called nor'-westers, are produced which give rainfall, which is only local and very irregularly distributed. Such storms are, however, generally confined to the close of the month, and when they do occur, they are sometimes rather violent and attended with more or less severe hailstorms.

The whole of the rainfall in February is therefore brought about by these abnormal conditions, and it is generally small in amount and somewhat irregularly distributed, though usually larger than in January. The normal fall averages from about an inch in East and South-West Bengal and Orissa, and rather more than half an inch in North Bengal and Chutia Nagpur, to about four-tenths of an inch in Behar.

Meteorology of the month.—The important features of the meteorology of February 1889 in Bengal have been—

1. Pressure has been everywhere in excess, varying at the different stations from ·01 inch to ·06 inch, and giving a mean excess above the normal of over ·03 inch. The largest excess was in South-East Bengal.

2. Temperature has varied largely during the month, and the mean is about 1° in excess in all districts.

3. Humidity has been high, but cloud proportion has been below the average everywhere except in Behar, where the weather was most unsettled during the passage of two depressions.

4. Two important depressions passed over Bengal during the second and third weeks of February, and towards the end of the month weather became unsettled in consequence of a depression which existed in Sind and Rajputana, but which did not pass over Bengal.

5. Considerable quantities of rain fell generally over the province about the 12th and again between the 17th and 20th. Behar, where the heaviest falls occurred during these two periods of unsettled weather, also received slight showers on the 25th.

A barometric depression which was passing rapidly over Bengal at the end of January continued to affect the weather in East Bengal during the first day or two of February. Decidedly cool weather then set in over the whole province, and a steady northerly and north-westerly current continued till the 7th, when a slight depression over Bengal caused southerly winds in the southern districts of the province. Otherwise the weather was not altered by this depression. It quickly filled up, and weather again became normal till the arrival of a low-pressure area, which drifted eastwards from Central India about the 11th. Rain fell in Behar on the 11th, and became general over the province on the 12th, usually accompanying local thunderstorms. The depression moved rapidly over Bengal, and on the 12th it was over East Bengal, while on the following day it had entirely disappeared. Temperature during those days was very high, and the mean for the whole province was about 4½° in excess of the normal. A rapid fall followed, and weather became of the usual north-east monsoon character till the second important depression of the month caused a series of disturbances, beginning in Behar on the 17th and continuing for three or four days in almost all districts, and until the 21st in East Bengal. From the 18th till the 20th thunderstorms were frequent. The depression was, however, becoming more shallow and diffused as it approached Bengal, hence, though it extended over the whole province, the total fall of pressure was nowhere large. Though it began a little earlier in Behar, conditions in the different districts were almost identical during the three days 18th to 20th. After that the weather became fine, though winds were light and irregular in the southern districts, tending to southerly with decidedly rising temperature till the end of the month. The only exception to the continued fine weather during the last week in the month was in North Bengal and Behar, where the weather was affected by the depression in Northern India, causing a few showers on the 25th instant.

Pressure.—The mean pressure for the month has been everywhere in excess, the amount at the different stations varying from ·01 inch to ·06 inch. The pressure was in largest excess in the early part of the month, while during the latter half it was nearly normal, though affected by irregular oscillations. During the first week the excess was everywhere nearly ·05 inch, and in the following week at several places it amounted to nearly inch, while it was everywhere greater than ·05 inch. The mean for the second week therefore was high, though a depression was over the province during two days of the week. The fall which took place between the 7th and 20th reduced the excess and at the end of the third week pressure was very nearly normal, and remained so till the end of the month though with an upward tendency. The important pressure changes were the falls which gave the three low-pressure areas about the 8th, 12th and 20th. The two first lasted for about two days, and the last for five days; otherwise the pressure has generally been increasing during the month.

In Assam the mean pressure for the month has been in excess of the normal by 0·03 inch

Temperature.—Rapid changes of temperature have been frequent, especially in the early part of the month. There was a rapid fall at the beginning which caused a considerable defect over the whole province. Temperature generally increased during the second week, but on the 13th there was a very rapid fall amounting in some cases to 7°. The changes during the third week were very similar to those of the second, generally rising, with one rapid fall about the 20th. During the fourth week there was a steady rise. There was, therefore, a general defect at the beginning of the month, amounting to more than two degrees, but during the rest of the month the average temperature was in excess. The mean for the whole month was about 1° in excess in Orissa, North Bengal, Behar, and Assam. In the other districts the excess was considerably less, and only amounted to a tenth of a degree in South-West Bengal. For the whole of the province of Bengal, therefore, the mean temperature has been in excess of the normal by between half and one degree. In Assam the temperature has shown a mean excess of 1·3°.

The following table shows generally the variation of the mean temperature from the normal, week by week, at nine typical stations in the province:—

Stations	Week ending 1st February			Week ending 8th February			Week ending 15th February			Week ending 22nd February		
	Variation of actual mean maximum temperature of week from normal mean	Variation of actual mean minimum temperature of week from normal mean	Variation of actual mean daily temperature of week from normal mean	Variation of actual mean maximum temperature of week from normal mean	Variation of actual mean minimum temperature of week from normal mean	Variation of actual mean daily temperature of week from normal mean	Variation of actual mean maximum temperature of week from normal mean	Variation of actual mean minimum temperature of week from normal mean	Variation of actual mean daily temperature of week from normal mean	Variation of actual mean maximum temperature of week from normal mean	Variation of actual mean minimum temperature of week from normal mean	Variation of actual mean daily temperature of week from normal mean

Rainfall.—Rain fell, in connection with two important depressions during the month, in considerable quantity on the 11th and 12th, and again from the 17th to 20th. On the third occasion, about the 25th, a few unimportant showers fell in Behar and North Bengal. The quantity which has fallen and the number of rainy days have both been above the average in all districts except East Bengal. In Behar the total fall has been about 1·2 inches, very nearly three times the normal fall for February. South-West Bengal and South Behar have each received 1·28 inches. Orissa and North Behar 1·1 inch, and the other districts nearly 1 inch. The falls in South-West Bengal, Chutia Nagpur and Orissa have been distinctly, though not largely, in excess of the normal, though in North Bengal the fall has been nearly double the normal amount; and, as stated previously, the fall in East Bengal has been slightly in defect of the normal. Comparing the actual falls with the normal, and expressing them as a percentage of that amount, South Behar has received 291 per cent., North Behar 260 per cent., North Bengal 170 per cent., South-West Bengal and Chutia Nagpur 122 per cent., Orissa 120 per cent., and East Bengal 81 per cent.; or considering that each of these districts has an equal value in the calculation, the rainfall in the whole province in February may be said to have equalled 167 per cent. of the normal.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the month of February 1889 :—

Meteorological Divisions.	Temperature.						Rainfall.							
	Highest observed during month.	Lowest observed during month.	Averages for month.			Average mean of month above or below normal mean of month.	Of month.			Rainy days.			Since 15th May 1888.

The extreme variation of temperature	29 8
The maximum temperature	90·6
	Miles.
The highest velocity of the wind in one hour	10
	lbs.
The highest pressure of wind on one square foot	Not measureable.
	%
The mean relative humidity	64
The average relative humidity of the corresponding period for 24 years, S. G.'s Office	69
	Inches.
The total fall of rain from 3rd to 9th March 1889	Nil.
The average fall of the corresponding period for 24 years, S. G.'s Office ...	9·46
The total fall from 1st January to 9th March 1889	2 90
The average fall of the corresponding period for 24 years, S. G.'s Office ...	2·18

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h. 10h. 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

⌓ dew, ≡ *fog*.

A. Pedler,

For Offg. Meteorological Reporter to the Govt. of India.

Meteorological Office, Govt. of India;

Calcutta, the 12th March 1889.

Statement of Rainfall in Bengal for the week ending Friday (6 p.m.), the 8th of March 1889.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 12*th March* 1889

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 8TH MARCH 1889.

AT the close of the previous week weather conditions had become slightly disturbed, particularly in the western districts of the province, by the formation of a shallow area of comparatively low pressure which stretched from Upper Sind into the Central Provinces. On the morning of the 2nd, though pressure was actually very high over the whole of the province, yet pressure was in comparative defect over Chutia Nagpur and the adjacent districts of the Central Provinces and North-West Provinces, thus showing that the depression was moving in an easterly direction over Bengal. This slight disturbance was, however, quite sufficient to give a series of thunderstorms with rain, and on the 2nd rain was reported from almost all stations in South-West Bengal, East Bengal, South Behar and Chutia Nagpur; while a few showers were received in North Behar and North Bengal—Orissa remaining almost rainless On the morning of the 3rd the depression which on the 2nd was passing into Bengal had apparently quite filled up, for pressure had risen generally, and in some cases rather rapidly, but still a few showers were reported on this day, principally in South-West Bengal and Chutia Nagpur. This depression, though comparatively feeble, as judged by the barometric movements and by the strength of the wind at the stations in the plains, was apparently of considerable intensity in the higher elevations of the atmosphere, for at Darjiling from the 2nd to the 3rd a gale of wind was reported to be blowing With the disappearance of the depression pressure became very high over the whole of the province and rather largely above the normal, the excess generally ranging between one and two-tenths of an inch, and this high pressure was maintained up to the 5th. Fine weather succeeded the disturbance, and rainfall quite ceased, while skies commenced to clear rapidly. Temperature was during the existence of the depression rather high and above the normal, but with the disappearance of the disturbed conditions and with the effects of the rainfall, it became decidedly below the normal, and on the 5th the defects in the mean temperature ranged up to about 5°. On the 6th, however, pressure commenced to decrease, and the fall continued almost to the close of the week; while, on the other hand, temperature in Bengal remained fairly low until the 7th, when from the 7th to the 8th with the setting in of southerly winds, temperature commenced to rise rather rapidly At the close of the week, therefore, the weather conditions were again settled, but they were those which usually occur at the transition period between the close of the cold and the commencement of the hot season

Pressure.—Has for the greater part of the week been rather largely above the normal, and even when the small disturbance was passing into the province, pressure remained decidedly high. For the whole week the mean pressure of the province has been 0·124 inch in excess of the normal, and this excess has been very equally distributed; the smallest excess at any of the stations which have been established sufficiently long to give reliable averages being 0·1 inch at Chittagong, while the largest excess is 0·14 inch at Cuttack

Temperature.—The temperature changes during the week have already been alluded to, and the mean temperature during this period of rather large oscillations has not been very far removed from the normal; the mean of the whole province only showing a defect of 0·6°.

The general distribution of temperature for the week and its variation from the normal are shown in the table below, where the mean temperature data for nine typical stations are given:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 8th March 1889.

	Normal mean [illegible] 8th March	Actual mean maximum [illegible] 8th March 1889	Variation of actual mean from the normal	Normal mean [illegible]	Actual mean [illegible] 8th March 1889	Variation of actual mean from the normal	Normal mean daily [illegible] March	Actual mean [illegible] March 1889	Variation of [illegible] the normal
Cuttack	94·4	97·3	+2·9	69·4	72·2	+2·8	81·9	84·8	+2·[illegible]
Calcutta	88·9	8[illegible]·9	−2·0	66·9	64·7	−2·2	77·9	7[illegible]	−2·1

Hazaribagh	83·9	82·9	−1·0	59·3	60·2	+0·9	71·6	71·[illegible]	0
Darjeeling	56·1	55·8	−0·3	42·1	41·4	−0·7	[illegible]	48·6	−0·5

Rainfall—As previously stated, has been absent in Orissa, and practically absent in North Bengal and North Behar. In East Bengal the falls have been small, and have only averaged 0·14 inch; in South Behar an average fall of 0·23 inch is reported; and in Chutia Nagpur one of 0·30 inch. The largest falls have occurred in South-West Bengal, where they average 0·38 inch. Except in the case of South-West Bengal, North Behar and Chutia Nagpur, where the falls have been very slightly in excess of the normal, the rainfall has generally been decidedly deficient.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 8th of March 1889 :—

Meteorological Divisions.	Temperature						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week			Rainy days.			Since 1st of month.		Since 15th May 1888.

METEOROLOGICAL OFFICE, INDIA ;
The 2th March 1889.

A. PEDLER,
For Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

THE chief features in the vital statistics of the principal Municipalities in Bengal for the week ending 23rd February 1889, deduced from the table annexed to this memorandum, are as follows :—

1. During the week in question births and deaths were registered in the proportions respectively of 22·4 and 25 8 per 1,000 of population, against 23 and 24·8 per 1,000 respectively during the preceding week ending 16th February, indicating an improvement in the registration of deaths.

2. The following Municipalities returned the highest proportions of births and deaths :—

Births.

	Ratio per mille.
Durbhanga	40·1
Rampore Beauleah	39·4
Utterpara	37·7
Hughli	37·6
Serampore	37·3
Comillah	34·7
Kishnaghur	32·2
Monghyr	31·6

Deaths.

	Ratio per mille.
Suburbs of Calcutta	46·1
Utterpara	37·7
Howrah	36·1
Bali	35·1
Durbhanga	33 0
Kishnaghur	30 3

3. As compared with the results of the preceding week, there was a noticeable increase of mortality from fever and a sensible diminution in the number of deaths from the maladies coming under the head "Other causes." The death-rates from the other diseases, excepting small-pox, exhibited only fractional variations, *vide* subjoined figures :—

	Ratio per *mille* during the weeks ending— 23rd Feb. 1889.	16th Feb. 1889.
Cholera	3·4	3·2
Small-pox	·2	·2
Fever	10·9	8·8
Bowel-complaints	4 1	4·2
Injury	·2	·5
Other causes	6 9	7 9

4. The greatest suffering from Cholera, Fever and "Other causes" occurred in the following Municipalities. The other diseases denominated in the above table exhibited no special local severity :—

Cholera.

	Ratio per mille.
Howrah ...	17·2
Suburbs of Calcutta ...	9·1

Fever.

	Ratio per mille.
Rampore Beauleah ...	26·3
Purneah ...	24·2
Kishnaghur ...	20 8

Other causes.

	Ratio per mille.
Serampore ...	13·7
Midnapore ...	12 4
Suburbs of Calcutta ...	12·4
Bhagulpore ...	10 9
Puri ...	10·5

5. With regard to mortality referable to *Sex*, *Class* and *Age*, the rates of deaths stood as follows :—

According to Sex.

	Ratio per mille.
Males	28·0
Females	23·2
Ratio of male deaths to every 100 female deaths ...	136

According to Class.

	Ratio per mille.
Christians	13·0
Hindus	26·6
Mahomedans ...	24·3
Other classes ...	36·4

According to Age.

	Ratio per mille.
Under 1 year ...	185·2
1 and under 5 years ...	24·6
5 " 10 " ...	5·6
10 " 15 " ...	10 9
15 " 20 " ...	16 7
20 " 30 " ...	21·5
30 " 40 " ...	20·5
40 " 50 " ...	20·8
50 " 60 " ...	32·8
60 years and upwards ...	64 0

W. H. GREGG, *Dip. Publ. Health, Camb.*,
Sanitary Commissioner for Bengal.

The 11*th March* 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population [illegible] except "Age," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 8TH MARCH 1889.

AT the close of the previous week weather conditions had become slightly disturbed, particularly in the western districts of the province, by the formation of a shallow area of comparatively low pressure which stretched from Upper Sind into the Central Provinces. On the morning of the 2nd, though pressure was actually very high over the whole of the province, yet pressure was in comparative defect over Chutia Nagpur and the adjacent districts of the Central Provinces and North-West Provinces, thus showing that the despression was moving in an easterly direction over Bengal. This slight disturbance was, however, quite sufficient to give a series of thunderstorms with rain, and on the 2nd rain was reported from almost all stations in South-West Bengal, East Bengal, South Behar and Chutia Nagpur; while a few showers were received in North Behar and North Bengal—Orissa remaining almost rainless On the morning of the 3rd the depression which on the 2nd was passing into Bengal had apparently quite filled up, for pressure had risen generally, and in some cases rather rapidly, but still a few showers were reported on this day, principally in South-West Bengal and Chutia Nagpur. This depression, though comparatively feeble, as judged by the barometric movements and by the strength of the wind at the stations in the plains, was apparently of considerable intensity in the higher elevations of the atmosphere, for at Darjiling from the 2nd to the 3rd a gale of wind was reported to be blowing With the disappearance of the depression pressure became very high over the whole of the province and rather largely above the normal, the excess generally ranging between one and two-tenths of an inch, and this high pressure was maintained up to the 5th. Fine weather succeeded the disturbance, and rainfall quite ceased, while skies commenced to clear rapidly. Temperature was during the existence of the depression rather high and above the normal, but with the disappearance of the disturbed conditions and with the effects of the rainfall, it became decidedly below the normal, and on the 5th the defects in the mean temperature ranged up to about 5°. On the 6th, however, pressure commenced to decrease, and the fall continued almost to the close of the week; while, on the other hand, temperature in Bengal remained fairly low until the 7th, when from the 7th to the 8th with the setting in of southerly winds, temperature commenced to rise rather rapidly At the close of the week, therefore, the weather conditions were again settled, but they were those which usually occur at the transition period between the close of the cold and the commencement of the hot season.

Pressure—Has for the greater part of the week been rather largely above the normal, and even when the small disturbance was passing into the province, pressure remained decidedly high. For the whole week the mean pressure of the province has been 0·124 inch in excess of the normal, and this excess has been very equally distributed; the smallest excess at any of the stations which have been established sufficiently long to given reliable averages being 0 1 inch at Chittagong, while the largest exce s is 0 14 inch at Cuttack.

Temperature.—The temperature changes during the week have already been alluded to, and the mean temperature during this period of rather large oscillations has not been very far removed from the normal; the mean of the whole province only showing a defect of 0·6°.

The general distribution of temperature for the week and its variation from the normal are shown in the table below, where the mean temperature data for nine typical stations are given:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 8th March 1889.

	Normal mean maximum temperature for the week ending 8th March.	Actual mean maximum temperature for the week ending 8th March 1889.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 8th March.	Actual mean minimum temperature for the week ending 8th March 1889.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 8th March.	Actual mean daily temperature for the week ending 8th March 1889.	Variation of actual mean from the normal.
Cuttack	94·4	97·3	+2·9	69·4	72·2	+2·8	81·9	84·8	+2·9
Calcutta	88·9	85·9	−2·0	66·9	64·7	−2·2	77·9	75·8	−2·1

Hazaribagh	83·9	82·9	−1·0	59·3	60·2	+0·9	71·6	71·6	0
Darjeeling	56·1	55·8	−0·3	42·1	41·4	−0·7	49·1	48·6	−0·5

Rainfall—As previously stated, has been absent in Orissa, and practically absent in North Bengal and North Behar. In East Bengal the falls have been small, and have only averaged 0·14 inch; in South Behar an average fall of 0·23 inch is reported; and in Chutia Nagpur one of 0·30 inch. The largest falls have occurred in South-West Bengal, where they average 0·38 inch. Except in the case of South-West Bengal, North Behar and Chutia Nagpur, where the falls have been very slightly in excess of the normal, the rainfall has generally been decidedly deficient.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 8th of March 1889:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week			Rainy days.			Since 1st of month.		Since 15th May 1888.

MEMORANDUM.

THE chief features in the vital statistics of the principal Municipalities in Bengal for the week ending 23rd February 1889, deduced from the table annexed to this memorandum, are as follows :—

1. During the week in question births and deaths were registered in the proportions respectively of 22·4 and 25 8 per 1,000 of population, against 23 and 24·8 per 1,000 respectively during the preceding week ending 16th February, indicating an improvement in the registration of deaths.

2. The following Municipalities returned the highest proportions of births and deaths :—

Births.

	Ratio per mille.
Durbhanga	40·1
Rampore Beauleah	39·4
Utterpara	37·7
Hughli	37·6
Serampore	37 3
Comillah	34·7
Kishnaghur	32·2
Monghyr	31·6

Deaths.

	Ratio per mille.
Suburbs of Calcutta	46·1
Utterpara	37·7
Howrah	36·1
Bali	35 1
Durbhanga	33 0
Kishnaghur	30 3

3. As compared with the results of the preceding week, there was a noticeable increase of mortality from fever and a sensible diminution in the number of deaths from the maladies coming under the head "Other causes." The death-rates from the other diseases, excepting small-pox, exhibited only fractional variations, *vide* subjoined figures :—

	Ratio per *mille* during the weeks ending—	
	23rd Feb. 1889.	16th Feb. 1889.
Cholera	3·4	3·2
Small-pox	·2	·2
Fever	10·9	8·8
Bowel-complaints	4 1	4·2
Injury	·2	·5
Other causes	6 9	7 9

4. The greatest suffering from Cholera, Fever and "Other causes" occurred in the following Municipalities. The other diseases denominated in the above table exhibited no special local severity :—

Cholera.

	Ratio per mille.
Howrah ...	17·2
Suburbs of Calcutta ...	9·1

Fever.

	Ratio per mille.
Rampore Beauleah ...	26·3
Purneah ...	24·2
Kishnaghur ...	20 8

Other causes.

	Ratio per mille.
Serampore ...	13·7
Midnapore ...	12 4
Suburbs of Calcutta ...	12·4
Bhagulpore ...	10 9
Puri ...	10·5

5. With regard to mortality referable to *Sex, Class* and *Age*, the rates of deaths stood as follows :—

According to Sex.

	Ratio per mille.
Males	28·0
Females	23·2
Ratio of male deaths to every 100 female deaths	136

According to Class.

	Ratio per mille.
Christians	13·0
Hindus	26·6
Mahomedans ...	24·3
Other classes ...	36·4

According to Age.

	Ratio per mille.
Under 1 year ...	185·2
1 and under 5 years ...	24·6
5 " 10 " ...	5·6
10 " 15 " ...	10·9
15 " 20 " ...	16 7
20 " 30 " ...	21·5
30 " 40 " ...	20·5
40 " 50 " ...	20·8
50 " 60 " ...	32·8
60 years and upwards ...	64 0

W. H. GREGG, *Dip. Publ. Health, Camb.,*
Sanitary Commissioner for Bengal.

The 11*th March* 1889.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending [illegible]

DISTRICTS.	NAMES OF MUNICIPALITIES.	Population: Males.	Population: Females.	Population: Total.	Births, Number of—: Males.	Births, Number of—: Females.	Births, Number of—: Total.	Births, Ratio per 1,000 of Population per Annum: Males.	Births, Ratio per 1,000 of Population per Annum: Females.	Births, Ratio per 1,000 of Population per Annum: Total.	Ratio of male births to every 100 female births.	Deaths from—: Cholera.	Deaths from—: Small-pox.	Deaths from—: Fevers.	Deaths from—: Bowel-complaints.	Deaths from—: Injury.	Deaths from—: Other diseases.	Deaths from—: All causes.	Ratio per 1,000 of Population per Annum: Cholera.	Ratio per 1,000 of Population per Annum: Small-pox.	Ratio per 1,000 of Population per Annum: Fevers.	Ratio per 1,000 of Population per Annum: Bowel-complaints.	Ratio per 1,000 of Population per Annum: Injury.	Ratio per 1,000 of Population per Annum: Other diseases.	Ratio per 1,000 of Population per Annum: All causes.	Ratio of deaths per 1,000 of population per annum in the previous week.	Sex, Deaths: Males.	Sex, Deaths: Females.	Sex, Ratio per 1,000 of Population per Annum: Males.	Sex, Ratio per 1,000 of Population per Annum: Females.	Ratio of male deaths to every 100 female deaths.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table except "Age," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

General remarks on the fluctuation of principal staples carried over the East Indian Railway during three weeks and five days ended 26th January 1889.

INCREASES.

Coal and coke.—There was an increase in both upwards and downwards coal and coke traffic; that in the former is due to demands for Foreign Railways, and the latter to despatches to Howrah.

Gunny.—This increase was due to up-country demands

Government stores.—This increase is principally in despatches from *viâ* Ghaziabad, from Chunar, and from Allahabad Fort.

Opium.—Despatches in December were held over owing to unsettled weather. The deficiency was partly made up during January.

Stone.—The increase was principally from Mirzapur and neighbouring stations to Sahebgunge and Calcutta

DECREASES.

Cotton.—The decrease was at Cawnpore and Agra, and was due to failure of crops in the Cawnpore district and to Bombay competition.

Piece-goods, European.—This is attributable to the large despatches made during December, causing the markets to be over-stocked.

Wheat.—Due to the absence of demand for export and to short supplies.

Gram and pulses.

Other rain and spring crops.—There was an unusual demand up-country last year owing to scarcity.

Rice (husked and unhusked).—There was an increase in weight carried attended with a decrease in earnings; the former was in short distance traffic, and the latter was owing to long lead despatches last year.

Iron.—This is chiefly from Howrah owing to poor demand from Patna, Cawnpore, Agra and Delhi.

Railway material, Foreign—The decrease was from Howrah owing to the completion of the Indian Midland Railway

Salt.—Increase in weight carried and decrease in earnings was chiefly at Howrah, from which station despatches over short leads increased, but long distance consignments fell off.

Seeds.—This decrease was chiefly in linseed, and was due to the absence of demand in Calcutta.

Spices.—The decrease was in chillies from Mokameh and Mokameh Ghât, and was due to the crops being both late and poor

Sugar (refined and unrefined)—The decrease was in despatches from the Oudh and Rohilkhund Railways, and from Gya line stations.

Fruits, other kinds—The betel-nut traffic fell off after the heavy despatches in December, and there was also a decrease in hurra from Jubbulpore line stations

THE CANAL REVENUE REPORT FOR 1887-88.

No. 458IA.

Government of Bengal.

PUBLIC WORKS DEPARTMENT.

IRRIGATION.

Dated Calcutta, the 18th March 1889.

RESOLUTION.

THE CANAL REVENUE REPORT FOR 1887-88.

READ—

The Canal Revenue Reports for 1887-88 and the Chief Engineer's note on the same.

The total outlay, direct and indirect, to the close of the year 1887-88 on canals in Bengal, of which capital accounts are kept, has been Rs. 7,06,14,592. Of this sum Rs. 8,66,000 have been contributed by the Imperial Government from Famine Relief and Insurance Funds, Rs. 92,24,652 have been provided from Provincial revenues, and Rs. 5,97,49,285 have been charged to Loan Funds. In addition to the sums mentioned above, Rs. 7,74,655 have been expended on surveys and investigations for irrigation works which have not been carried out.

2. There are now in actual operation in Bengal 844 miles of canal, of which 614½ miles are navigable. The total area commanded by irrigation canals is 2,698,846 acres, of which area 1,768,811 acres are irrigable by the completed projects, and 1,398,147 acres are irrigable by the existing works. Of this last area, 475,138* acres, producing crops of the estimated value of Rs. 90,70,980, were irrigated during the year. The total number of boats plying in the canals was 190,839, of which 24,709 were passenger boats. The total value of goods passing through the canals in boats and rafts aggregated Rs. 9,08,97,988 approximately.

3. The receipts from, and expenditure on, the canals in operation for the last three years are given in the statement below: the figures include indirect charges :—

Name of Canal.	1887-88.		1886-87.		1885-86.	
	Receipts.	Expenditure.	Receipts.	Expenditure.	Receipts.	Expenditure.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs. *
Major Irrigation Works.						
Orissa Canals	2,23,044	5,02,815	1,79,611	5,20,635	2,07,350	3,56,678
Midnapore Canal	2,34,378	2,50,849	2,34,185	2,35,219	2,62,484	2,18,127
Hidgellee Tidal Canal	41,858	66,976	54,404	23,645	52,435	50,147
Sone Canals	6,03,949	7,67,679	9,18,429	6,13,558	10,62,616	5,84,002
Total	11,03,229	15,88,379	13,86,629	13,93,087	15,84,935	12,08,954
Minor Works and Navigation.						
Irrigation and Navigation Works.						
Sarun Canals	20,665	29,307	12,427	28,659	41,143	23,331
Calcutta and Eastern Canals	5,79,934	2,24,656	4,83,654	1,92,264	4,79,484	1,96,209
Orissa Coast Canal	53,854	83,524	29,488	61,426	13,718	30,712
Total	6,54,453	3,37,577	5,25,569	2,82,349	5,34,345	2,50,252
Grand Total	17,57,682	19,25,896	19,12,198	16,75,436	21,19,280	14,59,206

There was thus a deficit for the year of Rs. 1,68,214. In addition to this, interest amounting to Rs. 23,13,446 was payable to the Imperial Government, so that the total deficit to be met from Provincial revenues was Rs. 24,81,660. The unfavourableness of the results for the last three years has thus been increasing, the deficits in 1885-86 and 1886-87 having been Rs. 15,89,119 and Rs. 19,56,284 respectively, and is again due both to falling off in receipts and increase in expenditure (though much more to the former than the latter) as compared with the previous year.

4. The increase in expenditure is to a very large extent a purely nominal one, so far as the Provincial revenues are concerned, and is due to a new method of accounting for the establishment, the charges for which are distributed approximately according to the establishments actually employed in divisions, instead of the Irrigation Department being assessed, as heretofore, with a fixed charge by percentage on expenditure, the remainder of the cost of establishment being shown against the Roads and Buildings Branch. The present method appears to be the fairer, and at any rate it shows in a clearer light what is the cost of establishment employed on the various canals. Chiefly on account of this alteration, the charges for Direction and Executive Establishments have increased by Rs. 2,12,967 as compared with last year, thus nearly accounting for the total increase in the working expenses. On the Orissa Canals there was, on the whole, a fair decrease, notwithstanding the increase in establishment charges, and the fact that a portion of the expenditure on repairing the breach made in the Mahanudi weir during the floods of 1886 fell in the year under review. On the Hidgellee Tidal and Orissa Coast Canals there was an increase, due, in the former case, to the necessity for carrying out the long-postponed silt clearance, and in the latter to the repairing damages caused by the cyclone of 1885. The comparatively small fluctuations on the other canals do not call for remark.

* Exclusive of 5,975 acres irrigated in an unauthorised manner in the Orissa Canals, and 13,855 acres of hot weather irrigation on the Sone Canals: this latter irrigation is almost entirely sugarcane and is included already in the kharif.

5. The revenue collected in the last three years on the works mentioned in the above statement is shown below:—

Head.	Revenue.		
	1887-88.	1886-87.	1885-86.
	Rs.	Rs.	Rs.
Water-rates	7,69,362	10,43,343	12,33,612
Navigation	9,21,482	7,88,685	8,34,780
Miscellaneous	66,838	80,170	50,888
Total ...	17,57,682	19,12,198	21,19,280

It will be seen that practically the falling off is entirely under Water-rates, whilst under Navigation there is a very satisfactory increase, to which reference will be made further on. An examination of the figures by canals shows that, although there is a small falling off on the Midnapore Canal, the decrease under Water-rates is otherwise wholly on the Sone Canals, there having been satisfactory increments both on the Orissa and Sarun Canals. The decrease on the Sone Canals is due to three causes—*Firstly*, the good collecting work of the year or two immediately preceding the year under review had largely diminished the arrears, so that there was actually less to collect; *secondly*, the comparatively small area irrigated in 1886-87 reduced the amount of the current demands; and *thirdly*, the agitation amongst the cultivators, which retarded the collections, so that there was a considerable increase in the closing balance as compared with the opening balance of the year.

6. The assessments or earnings of the same year are as follows:—

Head.	Earnings.		
	1887-88.	1886-87.	1885-86.
	Rs.	Rs.	Rs.
Water-rates	10,00,489	9,49,260	10,45,339
Navigation	9 21,482	7,88,685	8,34,780
Miscellaneous	66,838	80,171	90,481
Total ...	19,88,809	18,18,116	19,70,600

Judged by the standard of earnings, the working of the year would show for all canals a small excess over expenditure of Rs. 62,913.

7. The arrears of water-rates outstanding at the close of each of the last three years are shown in the statement following:—

Name of Canal.	Arrears.		
	1st April 1888.	1st April 1887.	1st April 1886.
	Rs.	Rs.	Rs.
Orissa Canals	92,109	87,458	64,884
Midnapore Canal	56,493	50,749	69,972
Sone Canals	4,11,281	2,31,582	3,98,321
Sarun Canals	27,265	26,437	15,912
Total ...	5,87,148	3,96,226	5,49,089

The increase in the outstanding balance is practically wholly on the Sone Canals, where, as already explained, the agitation amongst the cultivators and appointment of a Committee of Enquiry retarded the collections very seriously. The remissions were comparatively small, and were less even than those of last year.

8. It is necessary to distinguish between the collections of arrears and those of the current demand to understand clearly the results of the year's work. Of the outstandings of former years, a sum of Rs. 3,26,147, or over 76 per cent., was adjusted; 89·1 per cent. of this amount being collected, 4·9 remitted and 6·0 written off. On the whole, this is more favourable than last year, and the success was undoubtedly due in a great measure to the arrears in the Shahabad district having been collected before the agitation on the Sone Canals began. Of the current year's demand (which includes Rs. 1,30,559, due but not payable till after the expiry of the year), Rs. 4,59,375, or about 50 per cent. only was adjusted, about 1 per cent. of this having been remitted, and the rest, with the exception of a small sum of Rs. 86 written off, collected. The results cannot be considered satisfactory, but, so far as the Sone Canals are concerned, the falling off in the results is fully accounted for by the agitation to which reference has already been made. Notwithstanding, however, this difficulty, the Sone Canals, as a whole, show better results than Orissa or Midnapore, in neither of which was 50 per cent of the current year's demand collected. A considerable sum, some Rs. 19,000, was again written off as irrecoverable on account of old arrears on the Sone Canals, chiefly in the Shahabad district. In the Sarun Canals the total collections were a few hundred rupees short of the current year's guarantee, so that there was a slight increase in the outstanding balance as compared with the previous year. This is a vast improvement on the work of last year, but is still unsatisfactory. Excluding the sum due but not payable until after the close of the year, the total outstandings amount to Rs. 4,56,589. On the whole, and making allowances for the abnormal difficulties on the Sone Canals, the results can scarcely be deemed very unsatisfactory, and the Lieutenant-Governor notices with approval that the matter continues to receive the attention of the district officers. The necessity, however, to reduce the arrears, which still amount for years previous to the year under review to about a lakh of rupees, has not ceased, and Sir Steuart Bayley trusts that the subject will receive attention, especially in Orissa which, on the whole, is the most backward in this respect.

9. The total number of certificates for the recovery of arrears issued in all districts save Gya (the figures for which are not given, but they were very few during the year), was 28,805, against 30,504 issued in the previous year; and the pending cases were reduced from 28,953 to 19,369, good progress having been made in Orissa and in Shahabad. The progress, however, in Midnapore was not good, whilst the work in Patna, owing, apparently, to shortness of establishment, was very unsatisfactory. The reduction in the number of certificates issued continues.

10. The information regarding complaints, though fuller than that given last year, is still very incomplete. So far as can be gathered from the figures afforded in the reports, 10,332 complaints against assessments were pending from the previous year, or filed during the year on the "Major works" systems: of these 8,120 were disposed of, leaving 2,212, or rather more than 21 per cent., still pending. Considering the circumstances of irrigation in Bengal, the number filed, although large, does not appear to be out of proportion on the whole, though the following table would seem to show that there is considerable room for improvement on the Orissa Canals in the assessment of water-rate and administration generally; since, not only were the complaints more in proportion to the area irrigated than even on the Sone Canals, where the number was abnormally raised by agitation, but the percentage of complaints admitted was very high:—

	Orissa.		Midnapore.		Sone.		Total.	
	No.	Percentage on cases disposed of.	No.	Percentage on cases disposed of.	No.	Percentage on cases disposed of.	No.	Percentage on cases disposed of.
Pending or filed during the year	2,743		841	...	6,748	.....	10,332	.....
Disposed of ... Admitted	1,109	89·4	285	37·6	2,285	37·3	3,679	45·3
Disposed of ... Dismissed	131	10·6	472	62·4	3,838	62·7	4,441	54·7
Disposed of ... Total	1,240	100·0	757	100·0	6,123	100·0	8,120	100·0
Pending on 31st March 1888	1,503	....	84	....	625	......	2,212	....
Area irrigated in 1887-88. Acres	109,506		65,864		315,380		490,750	
Proportion of acres irrigated to one complaint	39·9		78·3		46·7		47·5	

The above table, for want of the necessary details, is not quite correct as regards the proportion of acres to one complaint, inasmuch as it has been impossible to separate the arrears from the complaints filed in the year, whilst the area for the year has been taken. Still for practical purposes of comparison it can be accepted, and the Lieutenant-Governor trusts that the above comparison will show the officers concerned of the Orissa Canals the necessity for greater care in assessing water-rates and in the administration of their duties generally.

11. The areas irrigated (actuals) during the last three years are detailed in the following table:—

		1887-88.	1886-87.	1885-86.
		Acres.	Acres.	Acres.
Orissa ...	Kharif ...	108,867	75,115	70,563
	Rabi ...	502	2,440	1,605
	Perennial ...	137	164	171
	Total ...	109,506	77,709	72,339
Midnapore ...	Kharif ...	65,864	63,762	70,604
Sone ...	Kharif ...	57,595	30,082	80,792
	Rabi ...	27,501	16,662	50,610
	Perennial ...	6,265	11 626	10,527
	Hot weather ...	13,855	15,278	10,857
	Five years' lease ...	210,164	194,556	179,784
	Total ...	315,380	268,204	332,570
	Total Major Works ...	490,750	415,675	475,513
Sarun ...	Kharif ...	1,699	566	888
	Rabi, including hot weather ...	2,519	1,580	3,677
	Total Minor Works ...	4,218	2,146	4,565
	Grand Total, Major and Minor Works ...	494,968	417,821	480,078

There is a very satisfactory increase on the Orissa Canals, and a satisfactory increase on the Sone Canals, due chiefly to the favourable character of the season from an irrigation point of view. Most of the increase on the Orissa Canals and a fair proportion of that on the Sone Canals is under long leases, so that the anticipation of an extension of irrigation expressed in the Resolution on last year's report appears to be receiving confirmation. The irrigated area on the Midnapore Canal continues unfortunately to decrease. The cause is said to be the irregularity and insufficiency of the supply in the Cossye river, and for this hitherto no practicable remedy has been found.

12. The tollage collections from the various canals for the last three years are given in the table following:—

Year.	Orissa Canals.	Midnapore Canal.	Hidgellee Tidal Canal	Orissa Coast Canal.	Sone Canals.	Calcutta and Eastern Canals.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1885-86	64,093	1 25,331	52,143	13,663	41,712	4,97,578	7,94,520
1886-87	58,664	1,09,693	51,904	28,587	49,665	4,73,193	7,71,706
1887-88	66,628	1,26,574	40,406	52,828	50,984	5,71,872	9,09,292

The increase is about 15 per cent. on the total collections of last year, and upwards of a lakh more than the collections of any previous year since 1882-83 inclusive, from which date only the whole of the figures are readily available. The chief increase is on the Calcutta and Eastern Canals, on which there was a small defect last year. It was, however, mentioned in last year's Resolution that the decrease did not point to any permanent decline, and the figures for

the year under review confirm this opinion. The increase is due to the expansion of the grain and jute traffic. The receipts on the Orissa Canals are the highest since 1882-83, when they were almost the same figures, viz., Rs. 66,736, the highest on record. On the Midnapore Canal they are the highest on record, excluding transport service receipts. The falling off in the Hidgellee Tidal Canal revenue is due to the closure of the canal for silt clearance. The increase in revenue on the Orissa Coast Canal is satisfactory, being in excess of the forecast.

13. On the Nuddea rivers there was a small falling off in the receipts, attributable to the impossibility during 1887-88 of maintaining more than one of the three alternative routes between the Ganges and Calcutta in a navigable condition, on account of the deterioration of the entrances from the Ganges.

14. The Lieutenant-Governor observes that the necessity for further enquiry and the collection of opinions from experts has hitherto prevented any action being taken on the report of the Commission that enquired in 1888 into the working of the Sone Canal system. These have now been brought to a completion, and the report will be disposed of without further delay.

15. With the exception of the revenue report of the Commissioner of the Orissa Division, all reports were received with fair punctuality. The Examiner's Finance Accounts were received about the same time as last year. Both in submitting and in dealing with the revenue reports, there is need, in the Lieutenant-Governor's opinion, for increased punctuality.

ORDER.—Ordered that a copy of this Resolution, and of the note and its accompaniments, be submitted to the Government of India, in the Public Works Department, for information; also that copies be forwarded to the Appointment, Revenue and Financial Departments of this Government; the Board of Revenue, Lower Provinces; the Commissioners of the Presidency, Burdwan, Patna and Orissa Divisions; the Collectors of the 24-Pergunnahs, Nuddea, Hooghly, Midnapore, Burdwan, Patna, Shahabad, Gya, Sarun, Cuttack and Balasore; the Superintending Engineers of the Orissa, South-Western and Sone Circles; and the Examiner, Public Works Accounts, Bengal, for information.

By order of the Lieutenant-Governor of Bengal,

C. W. I. HARRISON, *Lieut.-Col.*, R.E.,

Offg. Joint-Secy. to the Govt. of Bengal,

P. W. Dept.

Government of Bengal.

PUBLIC WORKS DEPARTMENT.

IRRIGATION BRANCH.

REVENUE REPORT.

Note by LIEUTENANT-COLONEL C. W. I. HARRISON, R.E., *Chief Engineer, on the Canal Revenue Reports for the year* 1887-88.

THE capital expenditure on Irrigation Works, for which capital accounts are kept, amounted during the year 1887-88 to Rs. 8,81,873 for direct and Rs. 21,145 for indirect charges—

	Direct charges.	Indirect charges.	Total.
	Rs.	Rs.	Rs.
Capital expenditure not charged against revenue	5,45,628	12,348	5,57,976
Minor Works and Navigation, Provincial	3,36,245	8,797	3,45,042
Total ...	8,81,873	21,145	9,03,018

2. The total capital outlay at the end of the year 1887-88, including indirect charges, was as follows:—

	Direct charges.	Indirect charges.	Total.
	Rs.	Rs.	Rs.
Major Irrigation Works			
Productive Public Works ...	5,81,08,956	16,40,329	5,97,49,285
Minor Works and Navigation.			
Protective grants—Imperial ...	8,66,000	.... ..	8,66,000
Ordinary revenue { Imperial and Provincial } ...	97,22,824	2,76,483	99,99,307
Total	6,86,97 780	19,16,812	7,06,14,592

3. This outlay is divided under the different projects thus:—

WORKS.	DURING 1887-88			TO END OF 1887-88.		
	Direct charges.	Indirect charges.	Total.	Direct charges.	Indirect charges.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.

* Includes expenditure of Rs. 8,66,000 from famine protective grants.

REVENUE.

4. The following statement shows the total receipts, working expenses, and charges for interest in respect of the works which are classed as Major Irrigation Works during 1887-88 and four previous years :—

PARTICULARS.	1887-88.	1886-87.	1885-86.	1884-85.	1883-84.
	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts from all sources	11,03,229	13 86 629	15,84,935	13,07,521	11,69,841
Working expenses (direct charges) ...	15,03,585	13 32,600	11,53,416	11,79,758	10,69,394
Net revenue	(—) 4,00,356	54 029	4 31,519	1,27,.63	1,00 447
Charge for interest	23,13,416	22,91,006	22,66,710	22 29,979	21,77,670
Deficit	27,13 802	22,36,977	18,35,191	21,02 216	20,77,223
Indirect charges debitable to Revenue	84,734	60,4-7	55,538	55 3,1	49,974
Total deficit ...	27,98 536	22,97,464	18,90,729	21,57,517	21,27,197
Rate per cent. on capital outlay ...	4·68	3 83	3 23	3·72	3·74

INTEREST

5. The total amount of interest payable to the Imperial Treasury on account of Major Irrigation Works for the year is Rs. 23,13,416.

FINANCIAL RESULTS

6. The following statement shows the financial results of both Major and Minor Irrigation Works, of which Capital and Revenue accounts are kept, to the close of the year 1887-88 :—

		Major Irrigation Works		Minor Works and Navigation.
		Rs.		Rs.
Direct revenue		1,38,71,155		1,99 11,386
Working expenses (direct charges)		1,41,88 526		76,06,529
Results on direct charges only ...	Loss ...	6,17,371	Profit ..	1,23,01,857
Indirect charges debitable to revenue		7,45,512		1,90,229
Results on both direct and indirect charges ...	Loss ...	13,62,883	Profit ...	1,21,14,628
Charges for interest on capital ...		3,17,24,078		Not calculated.
Net results including interest to end of 1887-88 . ..	Loss ..	3,30,86,961		...

Thus on Major Irrigation Works the net loss to the end of the year is, including interest, Rs. 3,30,86,961, or as much as 55·38 per cent. of the gross capital outlay, including all charges.

7. The expenditure on and receipts from Irrigation, Navigation, and Agricultural Works during the year 1887-88, as compared with those of preceding year, are shown below :—

EXPENDITURE

EXPENDITURE.	1887-88. Rs.	1886-87. Rs

			Deficit ...	2,58,270	22,68,314
Total ...	4,81,314	50,60,164	Total ...	4,81,314	50,60,164

EARNINGS.

10. The expenditure (direct charges only) and earnings are shown below:—

Expenditure.	Amount.	Earnings.	Amount.
I.—Maintenance and repairs.	Rs.		Rs.
Repairs	3,10,980	Water-rates	1,50,297
Establishment, including direction and accounts	98,153	Navigation	71,004
Tools and plant	16,391	Miscellaneous	14,171
Total ...	4,25,524		
II.—Revenue management.			
Irrigation establishment ...	40,300		
Navigation ditto ...	15,125		
Total ...	55,425	Total earnings ...	2,35,472
III.—Refunds of revenue.	365	Deficit	2,45,842
Total working expenses ...	4,81,314	Total ...	4,81,314

The earnings of the year include assessments made during the year under review on account of previous years, and the amounts legally due of the assessments of 1887-88.

LENGTHS OF CANALS.

11. The lengths of canals and distributaries in operation at the close of the year 1887-88 are given in the following statement:—

NAME OF CANAL.	Navigable canals.	Canals for irrigation only.	Distributaries and village channels.	Area protected from flood.	Area under command.	Area provided with distributaries.	Area irrigated, 1887-88.	Percentage of area irrigated to area provided with distributaries.
	Miles.	Miles.	Miles.	Acres.	Acres.	Acres.	Acres.	
Kendraparah system. Kendraparah	39	... ..	348½	120,421	101,110	91,000	54,404	54·2
Ditto extension	15	. ...		8,960	7,000	..		
Gobri (including extension).	21	...	......:	27,251	53,290	... ..		
Pattamoondee . .	......	47	32¾	65 600	51,250	9,387		
Taldundah system Taldundah	27	..	71½	19,520	15,250	15,250	31,227	54·9
Machgong	4	15	122½	44,928	68,206	41,600		
High Level Canal, Range I	33	.. .	131½	80,1.8	48,815	47,780	15,312	32·0
Total Mahanuddee Series ..	139	62	706½	375,808	344,921	205,017	100,943	49·2
High Level Canal, Range II . ..	12½	. ..	......	.	10,000	.	994	.
Ditto ditto, III ...	19	. ..	11¼	... ..	57,500	21,770	7,569	35·0
Total Brahmini-Byturni Series ...	31½		11¼	.	67,500	21,770	8,563	39 3
Total Orissa Canals ...	170½	62	718	375,808	412,421	226,787	109,506	48·2

When this is compared with the corresponding statement for the previous year, it appears that the total length of canals in operation is unaltered, but there has been an increase of 26¼ miles in the total length of distributaries, (that length having in the aggregate been completed on the Kendrapara and 3rd Range, High Level Canals, during the year), and a corresponding increase of 25,470acres in the area provided with distributaries. The area protected from flood remains the same as in the previous year, but there is an apparent reduction of 63,394 acres in the area under command, on account of areas which are commanded only by incomplete main canals having been excluded. Thus an area of 3,394 acres has been struck off from the area under command of the Machgong Canal and another of 60,000 acres from that under command of High Level Canal, Range II. No new village channels have been constructed.

RAINFALL.

12. The rainfall of the year 1887-88 and of the previous year is shewn in table No. IV E. There was a considerable decrease in the year under review.

The average rainfall in the immediate neighbourhood of the Orissa Canals, calculated on the figures at thirteen stations for eighteen years, is 56·28 inches, whilst the fall of the year at the same stations was 47·84 inches, or 8·44 inches below the average.

The Superintending Engineer supplies statistics of the rainfall in the upper districts drained by the Mahanadi. From these it appears that the average fall for the year at eleven observing stations was 52·18 inches. The average station fall for last year was 34 74 inches, and the average for the last six years, up to and including 1886-87, was 45·23 inches. The fall for the year under review is largely in excess of last year's and well above the average.

From the two statements below it is evident that the rainfall was during the kharif months much below the average of the last five years, but in most cases above the average during the rabi months :—

		AVERAGE OF THIRTEEN STATIONS.

* Mean of observations in Cuttack and Marsaghai.
† Ditto ditto at 13 stations throughout canal-irrigated area.

There is thus a marked increase in the kharif area irrigated, regarding which the Deputy Revenue Superintendent reports that the character of the kharif season was favourable for canal irrigation. The early rains were insufficient for the operation of *beason ;* while the short rainfall of October again brought a number of cultivators to the canals. The diminution in the rabi area is explained by the Superintending Engineer as attributable, in the case of the Kendraparah canal system, to short supply caused by the breach in the Mahanuddee weir and to the closure of some distributaries for repairs ; while, on the Taldundah canal system, the Machgong Canal was closed at the end of the kharif season, in order to permit of the sanctioned extensions being carried out.

It may be noted that the area of 109,506 acres irrigated amounts to about 48 per cent., or nearly half, of the area provided with distributaries, which has been already stated to be 226,787 acres, as against 35·1 per cent. in last year.

The percentage of area irrigated to area provided with distributaries has advanced on all canals, the percentage for the two years being—

	1886-87.	1887-88.	Increase.
Kendraparah system ...	41·1	54·2	13·1
Taldundah do. ...	32·8	54·9	22·1
High Level, Range I	25·9	32·0	6·1
Ditto, II ...		No distributaries	
Ditto, III ...	No distributaries	35·0	......

14. The whole of the irrigated area was assessed. The figures below show the method of assessment, alongside of the figures of the two preceding years, for purposes of comparison :—

		1887-88.	1886-87.	1885-86.
		Acres.	Acres.	Acres.
Kharif ...	Five-year leases ...	102,863	73,699	65,762
	Annual leases ...	37	68	50
	Unauthorised irrigation ...	5,975	1,354	4,754
Rabi	... ...	501	2,439	1,604
Perennial ...	Sugarcane	130	149	169
Total, including unauthorised irrigation ...		109,506	77,709	72,339
Total, excluding unauthorised irrigation ...		103,531	76,355	67,585

The area actually leased was 105,036 acres, and was therefore 1,505 acres in excess of the area assessed under leases, as shown in this table. In explanation of the difference, the Deputy Revenue Superintendent states that of the lands leased on Ranges II and III, High Level Canal, it was found impossible from various causes to irrigate 1,505 acres, which were consequently excluded from the assessments.

15. The Revenue Deputy Superintendent brings to notice the hesitation exhibited as usual by the cultivators to renew the leases which expired on the 31st March 1888 over a large area, in the hope apparently of a reduction of rate. The almost total failure of the monsoon rains in the beginning of the irrigation season (15th June to 18th July) compelled them, with few exceptions, to renew the leases on the Kendraparah, Taldundah and Machgong Canals. The Superintending Engineer gives figures showing how the increase in the kharif leases was distributed among the canals, the rate of increase being greatest on the Taldundah and Kendraparah systems. In view of the pressing demand which sprang up in October, some increase in the unauthorised irrigation of unleased areas was to be expected. In that month the canal banks of Ranges II and III of the High Level Canal were cut in places where supply shoots had formerly existed. The lands thus illicitly irrigated were inspected by the Deputy Revenue Superintendent, and subsequently assessed.

UNAUTHORIZED IRRIGATION.

16. The revenue collected by the Canal Revenue Department consists almost entirely of water-rates, with miscellaneous incomings from canal lands, fisheries, plantations, &c. At the commencement of the year under review, the accounts showed an unrealised balance of Rs. 94,105, of which Rs. 87,458 was for water-rates. The additional assessments, which fell due within the year, came to Rs. 1,56,832, of which Rs. 1,50,298 was for water-rates. The last-named sum is composed as follows:—Rs. 1,03,294 was that portion of the assessments on the crops raised in 1887-88 which fell due within that year; Rs. 35,480 was the balance of the assessments on the crops of 1886-87 which did not fall due till 1887-88; while the remainder was for dues incurred in earlier years. Thus, including arrears, the gross amount, which was liable to be collected during 1887-88, was Rs. 2,50,937, of which Rs. 1,46,039 was realised and Rs. 8,331 either remitted or written off as irrecoverable. Accordingly the year closed with an unrealised balance of Rs. 96,567, of which, Rs. 92,110 was for water-rates.

ASSESSMENTS AND COLLECTIONS

This balance is rather larger than that inherited from the previous year. Some increase, however, was to be expected; as, owing to the increased demand for water, the amount to be collected was unusually large. The portion of the year's water-rates, which was recoverable from cultivators within the year, was, as already stated, Rs. 1,03,294; of this, Rs. 46,622 (including Rs 47 written off) was adjusted, or about 45 per cent., leaving an outstanding of Rs. 56,672. At the same time considerable reductions were made in the outstandings incurred in earlier years, which stood thus on 31st March 1888:—

	Water rates.	Miscellaneous.
	Rs.	Rs.
1879-80	......	18
1881-82	439	159
1882-83	783	536
1883-84	1,094	886
1884-85	3,199	934
1885-86	8,137	1,134
1886-87	21,785	720
	35,437	4,387
Outstanding for 1887-88	56,672	70
Total arrears ...	92,109	4,457
	96,566	

17. The results of the year as regards water-rate collections only—miscellaneous revenue being excluded—are briefly exhibited in the table below,

which is similar in form to that adopted in the reports of the last two years:—

	OUTSTANDINGS OF ALL YEARS UP TO AND INCLUDING 1886-87.			DEMANDS DUE IN 1887-88 FOR THE IRRIGATION OF THAT YEAR.		
	Rupees.	Percentage of demands outstanding on 31st March 1897.	Rupees.	Rupees.	Percentage of demands for the year.	Rupees.
Outstandings to end of 1886-87 with assessments made in 1887-88 ...	......	100·0	1,34,461	....	100 0	1,03,294
Adjustments made in 1887-88 ... Collections ...	91,294	67·9		46,575	45·09	
Adjustments made in 1887-88 ... Remissions ...	7,730	5 7		47	0.04	
Total adjustments ...	......	73·6	99,024		45 1	46,622
Outstanding on 1st April 1888 ...	......	26 4	35,437		54·9	56,672

The results compare favourably with those of last year, when the percentage of adjustment was for old outstandings 68·8, and for the current demand 31·6. The proportion of remissions is also moderate in amount. In the balance outstanding is included a considerable sum which will have to be remitted in 1888-89, owing to the assessments having been based on the total amounts of the leases; whereas, on account of the breach in the Mahanadi weir, remissions had to be made subsequently for areas left unirrigated. The realisations of water-rates exceeded the budget estimate by Rs. 17,869.

COMPLAINTS.

18. The Deputy Revenue Superintendent reports that 2,743 complaints against the assessments were received Of these 2,097 were brought to his office and 646 to the Certificate office. Of 1,240 complaints disposed of, 1,109 were found to be wholly or partly valid. On 1,503 complaints orders had not been passed at the close of the year. Besides these, 618 complaints of a miscellaneous character were received, of which 489 had been disposed of on the 31st March 1888. The number of complaints undisposed of and pending from the previous year is not given. This should have been shewn, as well as the progress made in working off such arrears. In the absence of the necessary information on this point, it is not possible to say whether the progress for the year is satisfactory or otherwise; but an arrear of 1,503 complaints, or nearly 55 per cent. of the number lodged for the current year does not at first sight appear satisfactory, since it points to an accumulation of the arrears.

DUTY OF WATER.

19. The area under rabi cultivation in Orissa is so trifling that no satisfactory calculation can be made of the duty obtained from rabi irrigation. The duties obtained on the discharges of the various canals during the kharif season of four months will be found in table I E.

On every canal but one there is a diminution in the efficiency per cubic foot of water utilised—a diminution consequent on the low rainfall, which threw greater work on the canals. The exception is Range II of the High Level Canal, where in 1886-87 the area under irrigation being small and the water being wastefully used, an extremely low rate of duty was obtained. This canal has been since worked with greater economy, and now shows better results.

On the Kendraparah canal system the duty is 74·42 per cubic foot utilised, which compares with 95·87 last year. Of the canals composing this system, the Pattamoondee and Gobri canals are as yet insufficiently provided with distributaries, and therefore work to low duties. The duty of the Kendraparah canal itself is 93·77 acres.

On the Taldundah canal system the duty is 98·70, against 182·56 of the year previous. On the High Level Canal, Range I shows 77·72 against 169·28; Range II, 74·24 against 6·97; and Range III, 64·67 against 85·04.

CROP EXPERIMENTS.

20. Two hundred and fifty experiments on the outturn of crops were made, half on irrigated and half on unirrigated lands. The average outturn can be compared with the average of similar experiments made during the five years previous. On lands irrigated during 1887-88, the average weight of paddy per acre is 12·32 maunds and of straw 16·84 maunds, against 18·46 and 27 88, which are the respective averages of previous years. On

unirrigated lands the figures for the year are 9·38 maunds of paddy, against 14·00 maunds obtained in previous years, and 12·00 maunds of straw against an average of 21·70. The yield per acre both on irrigated and unirrigated lands was therefore exceptionally low, and the difference in favour of irrigation has also diminished both as regards paddy and straw. The Superintending Engineer observes that the reduction in the yield is chiefly apparent in the Brahmini-Byturni Division. The experiments made in the Acquapada-Jajepore Division show an increase under both heads, while in the Mahanuddee Division, though there is a small diminution under paddy, there is an increase under straw. The fact that out of 125 pairs of experiments 114 were made in the Brahmini-Byturni Division detracts from the value of the results thus obtained.

REVENUE ESTABLISHMENT.

21. The revenue establishment of the year cost Rs. 40,300. The following statement shows the details of the year under review with those of the three previous years:—

	1887-88.	1886-87.	1885-86.	1884-85
Establishment under Collector.	Rs.	Rs.	Rs.	Rs.
Superior officers and permanent and temporary establishment, including travelling allowance	28,749	26,007	24,028	23,961
Contingencies	2,218	2,625	1,948	1,890
Headmen's fees	2,208	1,209	1,229	3,468
Establishment under Executive Engineer.				
Permanent and temporary establishment ...	2,964	2,942	2,854	2,786
Contingencies	... .	......	... .	61
Water regulation establishment ..	4,161	4,222	4,215	4,198
Total ...	40,300	37,005	34,304	36,094
Collections of water-rates and miscellaneous revenue by the Canal Revenue Department	1,46,039	1,05,775	1,16,940	59,111
Percentage ...	27·6	34 98	29·3	61·0

NAVIGATION

22. The management of the navigation of the canals and the collection of the revenue from this source is in the hands of the engineering staff. The receipts include tolls collected on boats and rafts using the canal, and the earnings of the transport service maintained by Government between Bhuddruck, on the High Level Canal, and Cuttack, a distance of 75 miles. The collections from either source for the last ten years are given below:—

	Tolls.	Transport service.	Total.
	Rs.	Rs.	Rs.
1878-79	57,042	.....	57,042
1879-80	62 389	35,686	98,075
1880-81 ...	41,297	30,105	71,402
1881-82	53,219	29,987	83,206
1882-83 ...	66,736	41,737	1,08,473
1883-84	61,602	48,550	1,10,152
1884-85	52,784	27,018	79,802
1885-86	64,093	19,919	84,012
1886-87	58,664	8,384	67,048
1887-88	66,628	4,376	71,004

TRAFFIC.

23. The following statement compares the traffic (excluding the transport service) of all the canals in Orissa during the year under review with that of the year preceding:—

CANALS.	Miles open.	Tollage.		Number of boats.		Tonnage.		Value of cargo.		Tollage per mile of canal.	
		1887-88.	1886-87.	1887-88.	1886-87.	1887-88.	1886-87.	1887-88.	1886-87.	1887-88	1886-87
	No.	Rs.	Rs.	No.	No.	Tons.	Tons.	Rs.	Rs.	Rs.	Rs.
Taldandah and Machgong canals	31	6,207	2,880	1,430	726	44,566	14,081	98,665	57,972	202·1	92·9
Kendraparah and Gobri canals (including extension) ..	75	46,659	41,786	5,011	5,959	83,718	66,139	36,11,925	30,80,180	622·1	557·1
High Level Canal, Range I	33	8,306	7,852	2,975	3,321	24,118	16,075	8,26,500	6,25,505	251·7	237·9
Ditto, ditto II	12½	4,085	3,788	1,995	2,902	17,378	19,410	3,71,492	3,32,112	326·8	303·0
Ditto, ditto III	19	1,311	2,358	673	1,404	6,216	11,793	1,23,511	1,60,416	69 0	124 1
Total ...	170½	66,628	58,664	12,084	14,311	175,996	128,398	50,32,093	42,56,185	390·7	344 1

In this statement, which for purposes of comparison is uniform with those of previous reports, empty boats are not counted in obtaining the figures of

the columns headed "Number of boats" and "Tonnage;" were empty boats included, the number would stand at 20,294,* and the tonnage at 17,643. Moreover, in calculating "tonnage," the rafts using the canals, the cubic contents of which in 1887-88 aggregated 415,844 cubic feet, are disregarded. But the earnings from rafts and their value are included in the calculations of "tollage" and "value of cargo."

The decrease in the number of boats is noticeable, occurring as it does alongside of increases both in tonnage and tollage. This can only be ascribed to the use of a larger class of boats. In the ton-mileage there are increases over 1886-87 of 24,123 ton-miles in the up traffic and 663,910 ton-miles in the down traffic, though the average distance over which the boats travelled was slightly less. Form IID is a return of the weight of goods carried. Decreases appear both under government and private traffic, alongside of increases in the tollage earnings of both classes. As, however, the weights of the cargoes are obtained from estimates of the toll-collectors, who, in their turn, are dependent on the statements of the boatmen, the figures in this return cannot be accepted as altogether trustworthy. The down traffic is this year in excess of the up traffic in consequence of increased exports of building materials and metals; imports of grain show an increase, while exports remain nearly steady; and under most other classes of goods there is a decrease in the volume carried.

The passenger traffic shows a decrease, which the Superintending Engineer thinks was probably due to the loss of two ocean passenger steamers running between Calcutta and Chandbally in connection with the canals.

TRANSPORT SERVICE

24. Three competing companies still maintain steamer services between Chandbally and Cuttack.

The transport service between Bhuddruck and Cuttack is still maintained by Government. During the greater portion of the year under review, it was chiefly carried on by accommodation boats, as the two steamers usually employed were laid up for repairs. On the year's working there was a loss of Rs. 5,712.

MISCELLANEOUS RECEIPTS

25. The miscellaneous receipts for the year under review are compared by sub-heads with those of the previous year in the following table:—

Source of Revenue.	Year in which received		Difference.	
	1887-88.	1886-87.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
Plantations	1,131	1,885	......	754
Rent of lands	5,678	5,340	338	......
Canal produce	377	676	......	299
Rents of buildings	5,000	4,936	64	...
Sale of old materials	......	35	......	35
Fisheries	768	650	118	......
Sale of water	96	86	10	......
Miscellaneous	1,121	1,979	......	858
Total ...	14,171	15,587	530	1,946

Thus there is a decrease of Rs. 1,416, or 9·08 per cent., chiefly incurred under plantations, canal produce, sales of old materials, and miscellaneous. Small increases appear under rents of lands, sales of water, and fisheries.

REVENUE

26. The gross revenue for the last ten years under the three main heads is shown in the following statement:—

Years	Water-rates	Navigation.	Miscellaneous.	Total.
	Rs.	Rs.	Rs.	Rs.
1878-79	1,16 416	57,042	16,484	1,89,942
1879-80	1,57,747	98,075	23,365	2,79,187
1880-81	1,78,047	71,402	20,329	2,69,778
1881-82	1,24,290	83,206	15,655	2,23,151
1882-83	1,80,325	1,08,473	31,212	3,20,010
1883-84	1,11,856	1,10,152	15,860	2,37,868
1884-85	51,245	79,802	12,538	1,43,585
1885-86	1,06,842	84,012	16,496	2,07,350
1886-87	96,976	67,048	15,587	1,79,611
1887-88	1,37,869	71,004	14,171	2,23,044

* This figure was incorrectly given in the Administration Report as 24,892. The error first occurred in a monthly traffic statement

WORKING EXPENSES.

27. The working expenses (direct charges) of the Orissa Canals for the last ten years are shown in the following statement:—

PARTICULARS.	1878-79.	1879-80.	1880-81.	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.
1.—Maintenance.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Works, including transport service	1,47,113	2,56,748	1,99,554	2,17,755	2,22,431	1,89,564	2,03,137	2,22,690	3,52,761	3,10,980

Direct expenditure in England.	...	1,265	1,262	1,930	2,061	......	.. ...	...	..	...
Total maintenance	2,04,047	3,20,832	2,59,755	2,83,553	2,90,960	2,44,577.	2,69,340	2,93,054	4,49,456	4,25,889
2.—Revenue management.										
Irrigation establishment	27,598	38,794	38,812	37,022	37,022	33,432	33,999	34,304	37,005	40,300
Navigation ditto	7,445	8,153	7,501	8,085	13,578	14,681	12,398	15,219	15,471	15,125
Total revenue management	35,043	46,947	46,313	45,107	50,580	48,113	46,397	49,523	52,476	55,425
Total working expenses	2,39,090	3,67,779	3,06,068	3,28,660	3,41,540	2,92,690*	3,15,737	3,42,577	5,01,932	4,81,314

* Exclusive of Rs. 427 paid in England.

The canals have therefore been worked at a loss of Rs. 2,58,270 on the direct charges alone. The corresponding deficits for the last six years are shown below:—

	Rs.
1882-83	21,530
1883-84	54,822
1884-85	1,72,152
1885-86	1,35,227
1886-87	3,22,321
1887-88	2,58,270

MAINTENANCE

28. The cost of maintenance for this and the two preceding years is distributed under the sub-heads as follows:—

	1887-88.	1886-87	1885-86.
	Rs.	Rs.	Rs.
Head-works	1,94,272	2,34,500	61,899
Main canals	76,219	83,735	1,19,601
Distributaries	25,594	21,458	24,521
Drainage and protective works	10,778	6,690	6,431
Total ...	3,06,863	3,46,383	2,12,452

HEAD WORKS

The expenditure on head-works is again abnormally high; but as much as Rs. 1,19,980 was the share incurred in 1887-88 of the cost of renewing those portions of the Naraje and Mahanuddee weirs which were carried away in 1886. The whole of the renewals have now been completed. Extensive repairs were also carried out on the Brahmini and Burrah weirs. Increased expenditure was incurred in metalling the protective embankments of the city of Cuttack, and on river improvements. The other head-works were maintained at a less cost than in the previous year.

The year was one of moderate floods in the Brahmini and Byturni rivers, where the highest floods (which took place in the month of July) were lower than those of the previous year. In the Mahanadi river, however, there were four floods in the months of July and August 1887, each of which was higher in the Katjooree at Cuttack than that which occurred in July 1886. This of course was due to the heavy rainfall already mentioned in paragraph 12. The weir, however, at the place where it had been breached in 1886 and reconstructed, stood the strain fairly well, the injury being confined to the apron immediately above the deep hole in the river bed, the remains of the breach of 1886.

MAIN AND BRANCH CANALS

29. The main canals and branches were maintained at a cost of Rs. 76,219, inclusive of Rs. 5,396 spent in repairing the breaches at the lower end of the Pattamoondee canal, where it is crossed by the Chota Brahmini river. In 1886-87 the cost of repairing breaches at the same place was Rs. 8,822, and in 1885-86 it was Rs. 10,376; and in the revenue reports of those years these sums were erroneously included in the maintenance of drainage and protective works. In the summary of expenditure on maintenance given above, and in the statement below, which gives the cost of maintenance of each main

and branch canal separately for four years, these special repairs are included in the maintenance of the Pattamoondee main canal, to which they are properly chargeable—

As, with four exceptions, in each of which repairs of a special character were necessary, the upkeep of the several canals has cost less than in 1886-87, it is evident that economy has been successfully enforced throughout the circle, and the average mileage-rate of Rs. 328, to which the figures work out, may be taken as satisfactory. Of silt the quantity cleared by hand was 3,586,859 cubic feet, and the cost Rs. 9,927, giving an average rate of Rs. 2·77 per thousand cubic feet, against Rs. 2·90 in the year previous. The quantity dredged was 127,743 cubic feet and the cost Rs. 1,872, the average rate being Rs. 14·7, against Rs. 16·8.

DISTRIBUTARIES.

30. On distributaries the mileage-rate for repairs shows an increase.

	Miles.	1887-88.		1886-87.		1885-86.		Miles.	1884-85.	
		Cost.	Per mile.	Cost.	Per mile.	Cost.	Per mile.		Cost.	Per mile.

DRAINAGE AND PROTECTIVE WORKS.

31. On drainage and protective works the increased cost of maintenance was incurred chiefly on the protective embankments of the High Level Canal, which required more extensive repairs than usual.

MIDNAPORE CANAL.

CAPITAL ACCOUNT

32. The Capital, Interest and Revenue Accounts of this canal are given below:—

I.—CAPITAL ACCOUNT.

Total ...	2,34,378	31,63,348	Total ...	2,34,378	31,63,348

There was an actual capital outlay of Rs. 1,353 only during the year, the total to end of the year being Rs. 82,63,345, against Rs. 83,16,768, amount of estimate sanctioned by the Secretary of State.

As the period allowed for the execution of the works expired on the 31st March 1888, an application has been made to the Government of India for a renewal of the sanction on the grounds that certain works under the heads 'distributaries' and 'drainage works' are still necessary for the completion of the system as originally projected, and that additions to the dredging plant are required to ensure the proper maintenance of the canal for purposes of navigation and irrigation. A revised estimate, of which the proposed expenditure will absorb the whole of the balance of the original estimate, has been submitted for sanction with the application.

EARNINGS.

33. The revenue account calculated on "earnings" of the year and expenditure (direct charges only) is given below :—

EXPENDITURE.	Amount.	EARNINGS.	Amount.
I.—Maintenance and Repairs.	Rs.		Rs.
Works (extensions and improvements)	......	Water-rates	1,02,532
Repairs, including compensation ...	1,31,181	Navigation	1,26,574
Establishment, including direction and accounts	46,467	Miscellaneous ...	16,967
Tools and plant	31,409		
Total ...	2,09,057		
II.—Revenue Management.			
Irrigation establishment	22,797		
Navigation ditto	7,759		
Total ...	30,556		
III.—Refunds of Revenue ...	453		
Total working expenses ...	2,40,066		
Profit	6,007		
Total ...	2,46,073	Total ...	2,46,073

The water-rates on lands irrigated during the year are due within the year. The amount of water-rates shown as earned includes arrear assessments for former years.

RAINFALL.

34. The following table shows the rainfall for the year 1887-88 and the four previous years :—

STATIONS.	1887-88.	1886-87.	1885-86.	1884-85.	1883-84.	Average of 18 years previous to 1887-88
	Inches.	Inches.	Inches.	Inches.	Inches.	Inches
Midnapore ...	55 38	49 39	76 20	57 19	44·07	56·00
Panchkoorah ...	56 21	50 56	86 03	48 84	51·92	56 27
Contai ...	54 41	48 24	76 45	77 30	70 31	68 97

Of the three stations at which gauge readings are observed, Midnapore and Panchkoorah only are within the irrigated tract. The season was one of average rainfall, fairly distributed.

LEASES AND IRRIGATION

35. The area leased and irrigated amounted to 65,864 acres, of which 64,689 acres were five-year kharif leases. Of five-year leases for 69,762 acres, which had been current in 1886-87, leases for 20,285 acres expired on the 31st March 1887, while the renewals during 1887-88 amounted to only 15,212 acres. In addition, one-year leases for 1,175 acres were contracted, which were almost entirely for the irrigation of *boro* rice during the winter months. Owing to the insufficiency of the supply available, irrigation from the Midnapore canal is as a rule confined to the kharif season. As, however, during the year under report, the kharif crops over a portion of the country commanded by the Panchkoorah weir were destroyed by floods, special arrangements were made for the irrigation of boro rice subsequently planted on the fields which had been inundated, and 1,162 acres were leased for one year in this way.

The total area under five-years' leases may be classified thus :—

	Acres.
Leases which expired on the 31st March 1888	32,875
Ditto will expire ditto 1889	12,530
Ditto ditto ditto 1890	2,276
Ditto ditto ditto 1891	1,796
Ditto ditto ditto 1892	15,212
Total ...	64,689

Of the 65,804 acres leased, 59,362 acres were irrigated from the Midnapore weir, 5,955 from the Panchkoorah weir, and 547 from the tidal reaches. Similar information for three years is supplied in the following table, where the percentage which the area irrigated in each year bears to that commanded and provided with distributaries is shown :—

Particulars.	Totals provided for in the revised estimate	Midnapore Weir, Ranges IV and V.			Panchkoorah Weir, Range III, and Tidal Reaches, Ranges I and II.			Total.		
		1887-88.	1886-87.	1885-86.	1887-88.	1886-87.	1885-86.	1887-88.	1886-87.	1885-86.

On the Midnapore canal leases are given by the Deputy Revenue Superintendent, acting under the Collector of the district. Regarding the steady decrease in the irrigation, the Deputy Superintendent reports that the reason for it is alleged by the ryots themselves to be "insufficient, irregular, and untimely supply of water." That there is foundation for this charge is incontestible ; for, since the catchment basin of the Cossye is small in extent, a failure in the local rainfall is often followed by failure in the river supply, and water is least plentiful when most required. Thus in October 1887, the rainfall being less than 3 inches, a sharp demand sprang up, to meet which some 1,400 cubic feet of water per second—that being the greatest discharge which can be passed through the head sluice at Midnapore—might have been supplied (had it been available) with advantage. But it appears from the returns submitted by the Superintending Engineer that during October the average discharge of the Cossye was only 770 cubic feet per second, and that it fell as low as 165 cubic feet per second.

Another difficulty which is now being sensibly felt, and on which stress is laid in the report of the Collector, arises from the absence of village channels. In the earlier years of the Midnapore canal, irrigation was successfully conducted without village channels, and in the rules passed by the Lieutenant-Governor in 1884 there is no clause enforcing that the construction of village channels must precede the supply of water. A system of field-to-field irrigation has been practised, and has worked with success so long as nearly the whole of the irrigable area was under lease, but is now found to be attended with trouble and waste, especially in cases where villages near the canal, over whose lands water must pass in order to irrigate the lands of more distant villages, refuse to renew their leases. The same difficulty is felt in Orissa, where it has been found impossible, without very serious loss of revenue, to insist on the observance of the rules regarding village channels. A partial remedy would be found in making all leases within the area irrigable from any single distributary terminable on the same date ; and this course has been proposed by the Deputy Revenue Superintendent of Orissa. The matter is under consideration.

Complaint

36. 841 irrigation complaints were received by the Deputy Revenue Superintendent, of which 757 were disposed of. 533 were objections to certificates issued in cases of surreptitious irrigation, leases being eventually executed in 166 of these. 472 complaints were decided against the petitioners, and 285 were either allowed or compromised. The number of complaints undisposed of at the end of the previous year is not given, and consequently the progress made cannot be clearly shewn.

Duty of w

37. The kharif duties obtained were 116 acres per cubic foot for the area under Midnapore weir, and 184 acres for that under Panchkoorah weir. As in the case of the Orissa canals, these duties have been calculated on a four-months' base ; that is, on the average quantity supplied during the period commencing on July 1st and ending on October 31st.

ASSESSMENTS AND COLLECTIONS.

38. The following comparative statement shows the balances, assessments and recoveries of water-rates on the Midnapore canal since the year 1883-84 :—

Year.	Amount outstanding at commencement of year.	Amount falling due during the year.	Total for recovery.	Cash realization.	Remitted or written off.	Balance at the end of the year.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1883-84	1,42,476	1,47 992	2,90,468	1,31,000	14,777	1,44,691
1884-85	1,44,691	1,22 321	2 67,012	1,16,807	38,993	1,11,212
1885-86	1,11,212	1,10,868	2,22,080	1,08,709	43,399	69,972
1886-87	69,972	1,06,750	1 76,722	1,08,834	17,139	50,749
1887-88	50,749	1,02,532	1,53,281	90,837	5,951	56,493

The demand for the year was less by Rs. 23,441 and the collections by Rs. 17,997 than in the previous year. The percentage of the collections was 59·3 against 61·01. The decrease in the amount treated as irrecoverable is satisfactory.

The year closed with an outstanding balance in the books of the Revenue Deputy Superintendent for irrigation and miscellaneous revenue, regarding which that officer writes as follows :—

"Out of the total outstanding balance of Rs. 61,997, Rs. 7,079 are for previous years. Of this sum Rs. 2,384 being irrecoverable on account of death, abscondings and poverty, &c., has been recommended for remission, and when sanction to this remission is obtained, all old arrears up to 1885-86 will be finally and fully adjusted, and the net balance now outstanding will be reduced by that amount. The arrears of 1886-87 and 1887-88 alone will thus remain to be adjusted, and scarcely any perceptible amount of them will be allowed to to remain unrealized till next year. From this it will be seen that the struggle so long going on about the final and complete adjustment of the very heavy old arrears is almost at an end. For the future the rule ought to be never to allow arrears to accumulate for more than two years, and this will be carefully borne in mind.''

MISCELLANEOUS RECEIPTS.

39. The miscellaneous receipts were Rs. 16,907, of which Rs. 15,308 were collected by the Deputy Revenue Superintendent. The miscellaneous revenue realised by the Executive Engineer was Rs. 1,629, the chief item being rents of buildings.

CERTIFICATES.

40. Of the Rs. 1,06,145 of miscellaneous and irrigation revenue realized by the Revenue Department, Rs. 48,529 was for arrears and Rs. 57,616 for the current demand. The latter amount was realised without the issue of a single certificate, but no less than 16,052 certificates were filed on account of the arrears. Including certificate cases pending, the total number of cases was 18,434, of which 13,124, or 71·2 per cent., were disposed of. Out of the number disposed of, 1,907, or less than 15 per cent., were struck off, in all other cases the sums due being realized. In only 14 cases, or 0·1 per cent., was property, moveable or immoveable, sold; and in 218 cases, or less than 2 per cent., realization was effected on issue of warrants. The number of cases pending at the close of the years 1886-87 and 1887-88, respectively, were 2,382 and 5,310, and of this latter number 2,321 cases were pending for more than 6 months—a not very satisfactory state of affairs.

REVENUE ESTABLISHMENT

41. The cost of revenue establishment was Rs. 21,600, against Rs. 23,064 in the year previous. The percentage of cost on the total collections is 20·34 against 18·63.

NAVIGATION

42. The receipts under navigation increased from Rs. 1,09,693, at which they stood in 1886 87, to Rs. 1,26,574. The usual particulars regarding the traffic carried during the last ten years in vessels other than those of the Calcutta Steam Navigation Company are appended.

COMPARISON OF TRAFFIC.

Description.		1878-79.	1879-80.	1880-81.	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.

Tonnage of boats ..	Tons	290,488	320,927	292,452	332,325	360,073	382,979	412,379	372,608	387,440	409,866
Passengers carried ..	No.	128,098	180,294	166,238	202,029	181,251	170,745	......	......	(b)2,08,582	(d) 160,507
Estimated value of cargo, including rafts .	Rs.	1,50,51,350	1,59,41,496	1,43,15,608	1,47,79,798	1,60,43,032	1,70,53,401	1,57,52,097	1,27,22,175	97,25,587	1,18,44,844

(a) Exclusive of Rs. 8,639, tolls of Calcutta Steam Navigation Company.
(b) By private boats 112,139 and by the Company's steamers 96,443.
(c) Exclusive of Rs. 18,114, tolls of Calcutta Steam Navigation Company.
(d) By private boats 73,784 and by the Company's steamers 86,783.

For the purpose of comparison with previous years, empty boats are taken into account in calculating the number and tonnage of boats as given in this statement, while in the figures given in statement ID in the Statistical Tables only boats actually carrying cargo or passengers are included. Cargo-laden boats show an increase of 1,049 in number and 12,216 in tonnage; passenger boats a decrease of 2,718 in number and 18,414 in tonnage. It appears probable that the passenger traffic is being absorbed by the steamers, and that the falling off in the steamer passenger traffic shown above is due to faulty registration, the numbers being merely recorded from the statements of the "serangs." The improvement in the receipts was chiefly caused by a revival of the rice export trade.

The tolls paid by the steamers of the Calcutta Steam Navigation Company increased from Rs. 8,639 to Rs. 18,114. This is partly due to the withdrawal of the concession of consolidated tolls, the steamers this year paying on the tonnage of their vessels with the authorized allowance of one-half loss for a daily service.

REVENUE AND WORKING EXPENSES.

43. The statements below show the receipts on revenue account and working expenses of the Midnapore canal since 1878-79. The figures are for direct charges only:—

REVENUE RECEIPTS.

The actual cost of repairs was less than in the previous year, and is thus distributed by sub-heads:—

	1887-88.	1886-87.
	Rs.	Rs.
Head works, including buildings	11,667	9,588
Main canal and branches	89,238	1,03,489
Distributaries	20,687	17,617
Drainage and protective works	1,990	593
Steamers	7,599	6,465
Total ...	1,31,181	1,37,752

HEAD WORKS.

The increase in the expenditure on head works was incurred chiefly in clearing silt from lock entrances. It is the opinion of the Superintending Engineer that the moveable break-waters constructed near the head locks at Midnapore and Panchkoorah, in order to aid boats in entering the canal during floods, increase the accumulation of silt in lock channels. The expenditure on weirs was Rs. 1·48 per foot run of the Midnapore weir and Rs. 5·30 of the Panchkoorah weir, against Rs. 1·60 and Rs. 3·92, respectively, the year previous. Extensive repairs were required to the shutters of the Panchkoorah weir.

MAIN CANAL.

44. There is a decrease of Rs. 9,639 in the repairs of Main Canal and head works taken together, and an increase of Rs. 3,070 in those of distributaries. Mileage rates are worked out below:—

Year.	Main Canal and Head Works.			Distributaries.		
	Length of canal, exclusive of river crossings.	Total cost of work.	Rate per mile.	Length of distributary channels.	Total cost of work.	Rate per mile.
	Miles.	Rs.	Rs.	Miles.	Rs.	Rs
1880-81	48	80,993	1,687	267	20,140	75
1881-82	48	1,03,910	2,164	277	11,854	43
1882-83	48	1,01,821	2,121	277	20,407	73
1883-84	48	1,06,425	2,216	277	21,195	76
1884-85	48	1,15,171	2,399	277	18,865	68
1885-86	48	1,10,350	2,299	277	14,424	52
1886-87	48	1,20,135	2,503	283	17,617	63
1887-88	48	1,10,494	2,301	283	20,687	74

The excessively high maintenance charges of this canal are incurred chiefly on earthwork, amounting during the year to Rs. 59,161, and on navigation works, amounting to Rs. 19,103. Of earthwork charges, Rs. 43,660 was spent in clearing 6,723,165 cubic feet of silt, of which about 37 lakhs of cubic feet were cleared by the dredgers at an average rate of Rs. 7·63 per thousand, and 30 lakhs by hand or by excavation at an average rate of Rs. 5·10. Dredging was carried out mainly at the lock entrances, while of the silt cleared by hand over 26 lakhs of cubic feet were taken out of the first reach of the canal, which was closed for silt clearance during April.

DISTRIBUTARIES.

On distributaries, of Rs. 20,687 spent on repairs, Rs. 8,699 is the cost of removing 5,680,820 cubic feet of silt from the channels and Rs. 6,209 chiefly in adding earth to banks. The increase in the mileage rate of maintenance is mainly due to these causes. The distributaries suffered greatly from floods during this year.

REPAIRS TO DREDGERS.

There was an increase of Rs. 6,406 in the charges for tools and plant. The large expenditure on repairs was entirely on the dredging plant, which in one way or other gave a good deal of trouble.

45. On the year's working, including indirect charges, there is a loss of Rs. 16,471. The receipts and expenditure of five years are tabulated below:—

Year.	Receipts.	Expenditure.	Net revenue.
	Rs.	Rs.	Rs.
1883-84	2,64,576	2,23,586	(+)40,990
1884-85	2,57,955	2,31,915	(+)26,040
1885-86	2,62,484	2,18,127	(+)44,357
1886-87	2,34,185	2,35,249	(—)1,064
1887-88	2,34,378	2,50,849	(—)16,471

The unfavourable result for 1887-88 is brought about by the reduction, on the revenue side of the account, in the receipts from water-rates; while the expenditure has increased on tools and plant and in the share of establishment charges allotted under the new system of accounts to irrigation works in this province.

HIDGELLEE TIDAL CANAL.

46. The Capital, Interest, and Revenue Accounts of this canal are given below:— CAPITAL ACCOUNT

Total ...	41,858	7,70,453	Total ...	41,858	7,70,453

For thirteen years during which the canal has been in full work the receipts have averaged Rs. 49,189 and the working expenses Rs. 35,549. The maintenance charges have been unduly swollen by the necessity of periodically clearing away the accumulations of silt, while, as the canals have to be closed for the purpose, the receipts too suffer at the same time. Chiefly on account of this difficulty an estimate for remodelling the Hidgellee Tidal Canal has been prepared, in which provision is made for the deepening of the present channels, for twin supply channels and an iron supply pipe, and for a new lock. These proposals, the cost of which is estimated at Rs. 7,69,150, have lately been forwarded for the consideration of the Government of India.

NAVIGATION.

47. The table below gives the usual particulars regarding the traffic since the year 1878-79:—

COMPARISON OF TRAFFIC.

Particulars.		1878-79.	1879-80.	1880-81.	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.
Miles open	No.	29	29	29	29	29	29	29	29	29	29
Toll collections ...	Rs.	59,723	44,918	53,338	45,848	43,694	62,317	41,382	52,143	51,904	40,406
Rate of toll per mile ..	"	2059·41	1548·89	1839·20	1581·00	1510·00	2148·00	1427·00	1798·03	1789·79	1303·81
Number of boats ...	No.	24,969	16,811	21,783	20,057	17,445	22,728	17,660	19,316	17,542	13,503
Tonnage of boats ..	Tons.	164,688	120,021	152,781	133,020	132,884	196,764	145,424	163,535	140,747	124,903
Passengers carried	No.	3,623	3,061	3,531	3,286	3,510	......	.. .	. ..	8,569	11,951
Estimated value of cargo, including rafts ..	Rs.	41,55,353	25,86,031	23,34,731	21,10,855	23,83,244	36,42,029	30,06,852	32,74,961	31,48,826	26,13,351

The Superintending Engineer reports that the falling off in the receipts is attributable to the closure of the canal from January to March 1888 for the clearance of the heavy deposit of silt, and will recur until the remodelling of the canal is carried out. A considerable development of the traffic may be hoped for now that the Orissa coast canal has been opened throughout its length.

MISCELLANEOUS.

48. The only receipts other than tolls are miscellaneous. There is a decrease in these of Rs. 1,048, occurring chiefly in fisheries and rents of buildings.

REVENUE RECEIPTS AND WORKING EXPENSES.

49. The following table shows the receipts on revenue account and working expenses of the canal for the last ten years. The figures are for direct charges only:—

REVENUE RECEIPTS.

Year.	Navigation.	Miscellaneous.	Total.	Working expenses.	Net revenue.
	Rs.	Rs.	Rs.	Rs.	Rs.
1878-79	59,723	1,070	60,793	23,180	37,613
1879-80	44,918	863	45,781	42,284	3,497

The silt clearance of this canal, which had been postponed, as remarked in last year's note, had at length to be carried out, and to this must be ascribed the very large increase in the maintenance charges. More than 156 lakhs cubic feet of silt were excavated during the year at a cost of Rs. 30,491, Rs. 38,000 remaining to be paid in 1888-89. The expenditure on locks and buildings was also considerably in excess of that of the previous year, advantage being taken of the closure to put new mitres and cills to most of the locks, and do general repairs to gates and gearing. The establishment, which is charged proportionately to the expenditure, increased with the latter, the increase being still further enhanced under the new method of distributing the establishment charges over the various branches. The unusual appearance, therefore, of a large deficit this year is thus fully accounted for, and it is probable that another deficit will be shown in the current year on account of the charges for silt clearance in that year.

SONE CANALS.

50. The Capital, Interest and Revenue Accounts of these canals are given below:—

1.—CAPITAL ACCOUNT.

CAPITAL ACCOUNT

Heads of Account.	Outlay during 1887-88.	Outlay to end of 1887-88.

EARNINGS

51. The income calculated on "earnings" of the year and expenditure (direct charges only) are shown below:—

Expenditure.	Amount	Earnings.	Amount.
I.—Maintenance and Repairs.	Rs.		Rs
Works (extensions and improvements)	5,532	Water-rates	7,25,810
Repairs	3,08,448	Navigation	55,904
Establishment, including direction and accounts ...	2,10,227	Miscellaneous	28,459
Tools and plant	28,221		
Total ...	5,52,428		
II.—Revenue management.			
Irrigation establishment ...	1,35,243		
Navigation ditto ...	14,308		
Total ...	1,49,551		
III.—Refunds of Revenue ...	15,331		
Total working expenses ...	7,17,310		
Profit	92,863		
Total ...	8,10,173	Total ...	8,10,173

The water-rates shown as earned are the assessments of the year under review, which reached the Collectors within the year, as given in the memorandum of the Examiner of Accounts and quoted in the Superintending Engineer's report.

52. The following table shows the lengths of canals and distributaries open and the areas commanded and irrigable:—

LENGTHS OF CANALS AND DISTRIBUTARIES.

DIVISION.	Navigable canals.	Branch canals.	Distributaries.	Gross area under command.	Maximum discharge of canal.	AREA WHICH CAN BE IRRIGATED.		
						Kharif.	Rabi.	Total.
	Miles.	Miles.	Miles.	Acres.	Cubic feet per second.	Acres.	Acres.	Acres.
Eastern Sone	86¼	......	358	406,155	1,613	129,040	180,000	309,040
Arrah	70	71¼	467¼	618,354	} 4,342	347,360	360,000	707,360
Buxar	62½	77½	341½	704,000				
Total ...	218¾	148¾	1,166¾	1,728,509	5,955	476,400	540,000	1,016,400

The above are the revised figures furnished by the Superintending Engineer. There is a small apparent decrease of a quarter of a mile in the length of navigable canals, the length of those in the Buxar Division having been over-stated by that amount in last year's report. In the length of distributaries an addition of 8¼ miles has been carried out during the year. The return does not include 13¼ miles of village channels which are maintained by Government in the Buxar Division.

There is no change in the areas commanded and irrigable, the methods of calculating which for the purposes of this return were described in last year's report.

53. The following table shows the progress made with village channels and outlets:—

VILLAGE CHANNELS AND OUTLETS.

DIVISION.	Total length of village channels completed.	Total number of temporary and permanent outlets.	Number of permanent outlets
	Miles.	No.	No.
Eastern Sone Division	245½	2,394	111
Arrah Division	768	2,445	555
Buxar "	511½	1,160	162
Total 1887-88 ...	1,525	5,999	828
Total 1886-87 ...	1,518	5,652	654

Thus there is an addition of only 7 miles, all of which were constructed by Government agency, to the length of village channels. Of all the village channels now in use, 185 miles have been so constructed, and 1,340 have been constructed by villagers. Considerable progress has been made in all divisions in the construction of permanent outlets In the Eastern Sone and Arrah Divisions there is an increase in the total number of outlets, due to increase in irrigation, and there is a slight falling off in the area per outlet In the Buxar Division, on the other hand, numerous superfluous outlets have been removed, and, with an increase in the area irrigated, the area per outlet has risen from 52 acres to 93 acres.

RAINFALL

54. The statements below furnish the rainfall statistics of the Sone Canal system from the year 1883-84, and the distribution by canal divisions for four years:—

		Average of 22 Stations.				
		1887-88.	1886-87.	1885-86.	1884-85.	1883-84.

	Inches	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.
1887-88	14·35	0 92	38·11	20 59	1·08	43·57	20·43	1·22	38·18
1886-87	34 60	1·73	62·34	36·40	1·83	62·49	25·48	1·85	51·06
1885-86 ..	30·75	2 15	46 54	27·02	2·84	44 68	27 82	2·92	42 29
1884-85	17 11	0·40	30 57	18 84	0·54	31·62	20·96	0·69	31·87

The Superintending Engineer reports:—"The rainfall during the year (40·18 inches) for the area commanded by the Sone Canals was slightly under the average (40·89 inches), and very considerably below that of the year preceding (58·84 inches). In the kharif season the difference is marked—18·59 against 32·43 inches. There was an altogether unusual fall of rain in May, averaging 7·40 inches for the different observing stations. The rainfall in September and October was deficient. There was practically no rain from the 20th September to the 12th October; and as this period includes what is known as the "Hathia Nachattar," when the rice-fields require a plentiful supply of water, the deficiency then was of great importance. The rain which fell from the 13th to the 15th of October was of great importance to the rabi crops, though not technically included in the rabi season."

AREA LEASED AND IRRIGATED.

55. The following statement shows the area leased and irrigated during the last four years:—

Description.	1887-88.		1886-87.		1885-86.		1884-85.	
	Leased.	Irrigated.	Leased	Irrigated.	Leased.	Irrigated.	Leased.	Irrigated.

Five-year leases ...	210,535	210,164	194,419	194,550	173,829	179,784	145,094	151,510
Annual leases—								
Kharif	43,038	57,595	27,733	30,082	62,107	89,792	98,885	131,372
Rabi	16,738	27,501	10,639	16,062	31,764	51,610	38,935	77,558
Sugarcane	3,891	6,265	5,402	11,62[illegible]	5,186	10,527	4,293	9,262
Hot weather	9,313	13,855	8,619	15,278	6,117	10,857	738	959
Total annual leases ..	72,980	105,216	52,393	73,648	105,174	152,786	142,351	219,151
Grand Total ..	283,515	315,380	246,812	268,204	279,003	332,570	287,445	370,661
Percentage of leased to irrigated area	89·89		92·02		83·89		77·55	

Thus there is a marked increase over 1886-87 of irrigation, both under five-year and yearly leases, though the gross area falls below that returned for 1885-86 and considerably below that for 1884-85. Regarding the continued growth of the area leased for five years, it is stated that the limit of such leases has, so far as the Arrah Division is concerned, been nearly reached, as there is not much land remaining outside the leases which is suitable for constant irrigation.

Out of the 210,164 acres irrigated under five-years lease, it is estimated that 162,833 acres, or about 77·5 per cent., were cultivated under kharif, 28,589 acres, or 13·6 per cent., under rabi, and 18,742 acres, or 8·9 per cent., under sugarcane. These proportions have to a large extent been determined by actual observation,* and may be taken as practically accurate. They are adopted in the following statement, where the entire irrigation of three years is classified by crops and compared:—

* In the Arrah Division, on practically long lease for the irrigation of kharif crops, only actual observations are available for 55,580 acres, from which the percentages were found to be 83·6 rice, 7·5 rabi, and 9·0 sugarcane.

	1887-88.	1886-87.	Difference.	1885-86.
	Acres.	Acres.	Acres.	Acres.
Kharif	220,428	177,510	+42,918	217,072
Rabi	56,090	45,361	+10,729	77,079
Sugarcane	25,007	30,055	—5,048	27,562
Hot weather	13,855	15,278	—1,423	10,857
Total ...	315,380	268,204	+47,176	332,570

In this statement the figures for 1885-86 are also given, as that year like 1887-88, was one of only average rainfall and of considerable activity in irrigation. The Superintending Engineer draws an instructive comparison between the two years, showing how the distribution of the rains determined the character of the irrigation. The greater area of kharif irrigation last year naturally followed from the fact that the kharif rains measured nearly ten inches less than in 1885-86. Rabi irrigation, on the other hand, is largely influenced by the quantity of the October rains. In October 1887 there was a plentiful fall of 4·48 inches, which to a great extent rendered the rabi crops independent of the canals; whereas, although the total rabi rainfall, exclusive of October in 1885-86, was 2·65 inches, against only 1·07 in 1887-88, yet in October 1885 there was less than half an inch of rain, and rabi irrigation was correspondingly brisk.

The results of the year's operations, compared with those of 1886-87, show, as regards the kharif, an increase, which extends to all divisions, whilst the increase in the rabi is almost wholly in the Buxar Division. Under sugarcane the decrease is wholly in the Arrah and Buxar Divisions, the falling off being some 3,700 and 2,100 acres respectively, whilst in the Eastern Sone there is an increase of some 700 acres. There was a considerable decrease in the hot weather irrigation in the Arrah Division, which was only partly compensated by the increase in the other two divisions.

If we compare with the figures of 1885-86, a year more similar in character with 1887-88 than 1886-87, we find that the slight increase in the kharif is wholly due to the Eastern Sone Division, which rose from an area of some 36,000 acres to 50,000 acres, the Arrah Division falling off simultaneously by some 10,000 acres. The decrease in the rabi is in all divisions, whilst the increase and decrease in sugarcane is distributed as in the comparison with 1886-87. As regards hot weather irrigation the area in the Arrah Division rose from about 2,000 to nearly 10,000 acres, the Buxar falling off by some 4,000 acres. This class of irrigation is almost wholly dependent on the supply in the river, which supply is sometimes distributed to one and sometimes to another canal, according as it is necessary to keep them open or close them for repairs and clearance. No explanation of these fluctuations can apparently be given beyond the variation in the seasons and rainfall, to which remarks have already been made.

AREAS IRRIGATED BY DIVISIONS.

56. The areas actually irrigated in each of the executive divisions during the last five years are shown below:—

Year.	Eastern Sone Division.				Arrah Division.				Buxar Division.				Total for all Divisions.			
	Annual leases.				Annual leases.				Annual leases.				Annual leases.			
	Kharif and rabi.	Sugarcane and hot weather.	Five-year leases.	Total.	Kharif and rabi.	Sugarcane and hot weather.	Five-year leases.	Total.	Kharif and rabi.	Sugarcane and hot weather.	Five-year leases.	Total.	Kharif and rabi.	Sugarcane and hot weather.	Five-year leases.	Total.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1883-84 ...	36,030	150	18,620	54,800	96,593	10,973	56,372	163,938	101,413	4,133	26,330	131,876	234,036	15,256	101,322	350,614
1884-85 ...	46,531	1,328	25,136	72,995	97,400	4,556	82,573	184,619	64,909	4,337	43,801	113,047	208,960	10,221	151,510	370,661

		Duty on gross supply ...	45·4	88·7	97·0	93·6	79·9
	Rabi ...	Acres	12,324	44,946	47,371	92,317	104,641
		Duty on supply utilised ...	42·6	128·0	116·1	121·7	99·9

1886-87 was a year of such plentiful rain that its results are not of much value as standards of comparison. For this reason the figures of 1885-86 are also included in this return.

The kharif duties on the Sone Canals are calculated, to use the term adopted by the Government of India, on a three-months' base, that is, on the average gross supply during the three months from August to October inclusive. The same base has been used in former returns. The average duty obtained compares unfavourably with those of 1885-86 and 1886-87, in both of which the kharif rains were heavier. On the Eastern Main Series, however, though the duty recorded is still much below that obtained on the other canals, a decided improvement is visible, which is due to the introduction of better arrangements for distribution.

In the Arrah Division, Mr. W. A. Inglis, the Executive Engineer, has calculated that the supply of water spread over the country was equal to an effective fall of 5·7 inches of rain over the entire area, the drainage of which is effected by the canals of the division.

Other calculations regarding the irrigating efficiency of each cubic foot per second, supplied during the period of high pressure which followed the failure

of the *Hathya* rains, are given in the Superintending Engineer's report. A base of 14 days (from 29th September to 12th October) is taken. The duty so determined is for the Western Main Series 47·4, and for the Eastern Main Series 38·3 acres. In these calculations it was assumed that the whole of the supply was devoted to saving the rice crop, the cane-fields not receiving their share.

An attempt was made by the Executive Engineer, Arrah Division, to ascertain the actual quantity of water used for limited areas. The observations were made under adverse circumstances, in so far as the supply was given to fields which had been laid dry in anticipation of the *Hathya Nachattar*. On the other hand, the fields being alongside of the distributary, the loss in the channel was reduced to a minimum. The result was that during a period of four days 6·3 bigahs were irrigated per 24 hours by one cubic foot per second of discharge, giving just over 6 inches in depth on the whole area; and if it be assumed, as has been proposed at various times, that one such watering in 15 days is sufficient, then 1 cubic foot per second of discharge at the outlet should be sufficient for 94·5 bighas=59 acres if the outlet be constantly open, or for 63 bigahs=40 acres if the outlet runs for 10 days out of 15.

The continuation of the observations for a further period of seven days showed that 11 inches of water was given to the whole area irrigated, some of the fields receiving a second watering within five days of the first; the conclusion arrived at by the Executive Engineer was that the outlet was larger than necessary for the area served—a very just one.

The rabi duties are calculated as in former reports, on the supply utilised. A four months' base (from November to February) is taken. Notwithstanding the more favourable rainfall, the figures of the year under report work out to lower duties than those of 1885-86. Reasons for this decrease are not given in the Superintending Engineer's report, but the point is one of comparatively small importance, as cultivators are careful in their own interests to irrigate their rabi fields sparingly, and the supply of water is always plentiful and greater than the demand.

CROP EXPERIMENTS

59. Crop experiments to determine the value of canal water were as usual carried out. Of 333 rice fields so tested, the average yield per acre was decidedly superior in those which had been irrigated from the canals, being 17 maunds 27 seers of grain and 39 maunds 18 seers of straw, as against 10 maunds 30 seers of grain and 23 maunds 27 seers of straw from crops raised by other methods of irrigation. In wheat 212 experiments were made, and the balance both in grain and straw is slightly in favour of canal water; but this result is reversed in 21 experiments made on barley.

The Executive Engineer, Buxar Division, as the result of a hurried march through a portion of his division just before the rice was cut, states that he could safely say that the unirrigated rice had practically failed in the area traversed.

The following note by the Executive Engineer, Arrah Division, on the yield of a field which had been irrigated with canal water for the last two years is of interest:—

"One experiment of some interest was made at Nasrigunj. In village Nasrigunj field No. 653 (cadastral survey) has, since the commencement of canal irrigation, been cultivated with rice. Last season this block of land was sown with rabi crops instead, and irrigated as usual from the canal. The yield of field No. 653 was found to be 25 maunds per acre of wheat. The field had been manured by folding sheep on it. The result is satisfactory as showing that under proper cultivation a good crop of wheat can be grown with canal water. The land was originally poor, and has admittedly been much improved from the deposit of mud it has received from canal water."

Some doubt has been thrown on the value of these experiments. The Superintending Engineer states that in future they will be conducted as publicly as possible, and that zemindars will be invited to attend. In fact, a very valuable series of experiments have lately been completed by an officer unconnected with the department, and specially deputed for the purpose, which will be reported on elsewhere. This much may be said, that they confirm to a considerable extent the accuracy of the experiments made by the canal officers as to the value of canal water.

DEMANDS AND COLLECTIONS.

60. The following statement shows the demands, collections, and balance of water-rates for the last five years:—

YEARS.	DEMAND.			Remissions.	Net demand.	Collections.	Balance.	Percentage of collections to current demand.
	Arrears.	Current.	Total.					
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	
1883-84	3,11,665	7,42,311	10,53,976	1,45,974	9,08,002	4,84,209	4,23,793	65·2
1884-85	4,23,793	11,15,399	15,39,192	73,625	14,65,567	7,70,359	6,95,208	69·0
1885-86	6,95,208	8,07,702	15,02,910	1,26,266	13,76,644	9,78,323	3,98,321	121·1
1886-87	3,98,321	6,95,086	10,93,407	35,364	10,58,043	8,26,461	2,31,582	118·9
1887-88	2,31,582	7,25,810	9,57,392	26,525	9,30,867	5,19,586	4,11,281	71·5

As usual the figures given above are taken from those compiled by the Examiner of Accounts. The balances outstanding at the commencement and end of the year, and the amount of remissions, agree with those given by the Commissioner and Collectors, but there are discrepancies in the remaining items, due chiefly to the omission of miscellaneous revenue, and it has been found impossible to adjust them, though they are explained as far as practicable by the Superintending Engineer.

In the figure given above as the amount of the current year's demand, assessments of Rs. 1,30,559 are included, which were not legally recoverable till after the close of the year.

ARREARS.

61. The following analysis of the collections is intended to show the extent to which not only the current demand, but also the arrears of 1886-87 and earlier years, have been worked off. The figures are obtained from statement III attached to the Commissioner's reports. Though these have not in every case been found to agree exactly with the figures in the body of the report, the discrepancies are very trifling and do not affect the calculation of percentages:—

	Demand of 1887-88 how composed.	*Collected or remitted.	Percentage of demand adjusted.	Balance outstanding at close of year.
	Rs.	Rs.		Rs.
Arrears of 1884-85 and earlier years	43,376	26,063	60·0	17,313
Arrears of 1885-86	43,015	26,999	62 2	16,016
Arrears of 1886-87	1,46,191*	1,19,345	82 2	25,846
Total of arrear demand outstanding on 1st April 1887	2,31,582	1,72,407	74·4	59,175
Current demand of 1887 88	7.22,695	3,70,593	51·3	†3,52,102
Gross demand (including arrears)	9,54,277	5,43,000	56·9	......
Total outstandings at close of year ..	......	......	......	†4,11,277

* Includes Rs. 43,645 not legally recoverable within the year 1886-87.
† Includes Rs. 1,30,559 not legally recoverable within the year 1887-88.

The arrear balance with which the year commenced agrees with that shown in the returns of the Examiner of Accounts. In the closing balances shown in the two statements, there is a difference of Rs. 4 only. But the Examiner of Accounts, who includes the miscellaneous assessments and collections made within the year by the Collector of Shahabad, returns the gross demand at Rs. 9,57,392 and the gross collections and remissions at Rs. 5,46,111, the percentage being 57·0.

The closing arrear balance is extremely high, exceeding that left over from the previous year by more than 1¾ lakhs, while if the dues not legally recoverable within the year are not counted, the excess is still nearly a lakh, the figures for 1887-88 being Rs. 2,80,718 and for 1886-87 Rs. 1,87,914. It will be noticed, however, that the failure to collect occurred only in dealing with the current demand, as of the arrears of earlier years some Rs. 60,000 is all that still remains. These points are brought out in the table above given.

There can be little doubt that the agitation which led to the appointment of a Committee of Enquiry prejudiced the collections in more ways than one. The reluctance of the cultivator to pay was increased by exaggerated hopes of

remission. At the same time there was a great increase in the objections against the measurements, pending the disposal of which demand statements were kept back in the offices of Executive Engineers. From this delay in the issue of the demand statements, which is noticed in the reports of the district officers, the current collections of course suffered.

62. The following statement gives a comparison by districts of the operations of the year :—

Districts.	Arrears due for irrigation effected in previous years.				Demands for irrigation effected in year.			
	Percentage of total demands.				Percentage of total demands.			
	Demand.	Collections.	Remissions.	Outstanding at end of year.	Demand.	Collections.	Remissions.	Outstanding at end of year.
Shahabad—								
1887-88	100·0	66·0	13·8	20·2	100·0	54·8	0·7	44·5
1886-87	100·0	77·3	8·8	13 9	100·0	83 4	0·26	16 34
Patna—								
1887-88	100·0	45·5	5 6	48·9	100·0	22·0	0 2	77·8
1886-87	100·0	47 0	1·5	51·5	100 0	33·9	0 04	66 06
Gya—								
1887-88	100·0	89·0	1·7	9·3	100·0	42·2	0·2	57·6
1886-87	100·0	88·5	3·0	8·5	100·0	46 4	0·47	53 13
Average—								
1887-88	100·0	64·8	9·7	25 5	100·0	50·7	0 5	48·8
1886-87	100·0	74·3	7·2	18·5	100 0	76 35	0 25	23·4

The result of the operations cannot be considered satisfactory, the percentage of adjustments having been lower in all districts. Taking the total demand, both arrear and current, the Commissioner writes :—

"From the above figures it will be seen that both in Gya and Shahabad 60 per cent. of the total demand was adjusted during the year under report, while the adjustment in Patna was only 36 per cent., or a little more than one-third. On this subject Mr. Quinn, Collector of Patna, writes :—'The circle officer attributes the bad collections to the normal reluctance of the cultivators to pay their dues, increased this year by the false hopes of abatement or exemption excited by the appointment of the Irrigation Commission. There is no doubt a good deal of truth in these pleas, but they cannot be accepted as an explanation. Much of the reluctance to pay is no doubt due to a feeling on the part of rate-payers that they have not been supplied with water in such a way as to secure a full outturn of the crops, and much of the failure to collect is due to the indolence and dishonesty of the tehsildars, which it is the duty of the circle officer to counteract. Since the close of the year there has been some improvement.' Some of the tehsildars in this district who did not submit their account papers and money on requisition were suspended and afterwards dismissed, and one who, after keeping back his collections and accounts for a long time, finally forged a receipt to prove that he had paid in the money was criminally prosecuted, and was sentenced by the Patna Sessions Court to four years' rigorous imprisonment.

"In Gya a tehsildar was dismissed for making bad collections and keeping his accounts in a confused state. He misappropriated some Government money, and has been prosecuted.

"In Gya and Shahabad also the bad collection during the year was due to some extent to the agitation and the appointment of the Irrigation Commission. Rate-payers withheld payment in hopes of getting either entire or partial remission by way of reduction of rates, &c.

"Thus there were heavier balances in all the three districts at the close of the year, as compared with the balances with which the year opened."

63. Remissions show a great reduction in amount.

REMISSIONS.

	1887-88.	1886-87.
	Rs.	Rs.
By canal officers	6,911	13,279
By civil officers	19,614	22,085
Total ...	26,525	35,364

If refunds and cancelled khatianis are included, the result compares still more favourably.

	1887-88.	1886-87.
	Rs.	Rs.
Remissions and refunds	13,612	21,055
Cancelled khatianis	5,201	13,585
Total remitted by canal officers ...	18,813	34,640

Remissions by civil officers are of those arrears which it was found necessary to write off as irrecoverable.

The remissions by canal officers may be divided thus:—

	Percentage of remissions and refunds to gross demands. 1887-88.	1886-87.
Eastern Sone Division	0 74	0 68
Arrah Division	1·95	2·43
Buxar "	1·24	1 96

which may be considered satisfactory.

REVENUE ESTABLISHMENTS.

64. The expenditure on the revenue establishments employed is shown below:—

	1887-88.		1886-87.	
	Amount.	Percentage on collections.	Amount.	Percentage on collections.
	Rs.		Rs.	
Permanent and temporary establishments, such as zilladars, ameens, &c. ...	53,254	10·25	53,914	6 52
Establishment employed under Collectors...	30,466	5·85	28,028	3·39
Headmen's and patwaries' fees ...	51,523	9·92	61,718	7·47
Total ...	1,35,243	26·02	1,43,660	17·38

The figures are supplied by the Examiner of Accounts. There is an increase in the cost of permanent establishment under Executive Engineers, consequent on an increase in the sanctioned scale of pay, while in temporary establishment reductions have been made possible by the extension of long leases. The headmen's fees paid during the year were earned in that previous, and the lesser expenditure is due to the decreased area under irrigation then. The percentage of cost is greater owing to the deterioration of the collections already noticed.

COST OF MEASUREMENTS, &C., PER ACRE.

65. As regards the area assessed, the cost per acre is less than in the previous year, due to the increased area in 1887-88. There is, however, a decrease both in the absolute and relative cost of temporary establishment, which is satisfactory in every way.

Below is the usual approximate statement of cost of measuring lands brought under assessment during the year, and of preparing demand statements. The increase in the area assessed is followed by a corresponding reduction in the cost per acre of assessment.

Division.	Areas measured and assessed.	Cost of measuring crop.		Cost of preparing demand statements.	
		Total.	Per acre.	Total.	Per acre.
	Acres.	Rs.	Pies.	Rs.	Pies.
Eastern Sone	31,314	639	3·91	812	4·97
Arrah	60,467	2,851	9·05	2,038	6·47
Buxar	59,288	2,048	6·61	1,744	5·64
Total 1887-88 ...	151,069	5,538	7·00	4,594	5·83
Total 1886-87 ...	132,980	7,961	11·49	4,954	7·15

The rates are the lowest since 1884-85.

PUTWARIS.

66. The Superintending Engineer observes that when there is any dispute as to irrigation, there is still great difficulty in securing the attendance of putwaris, but that the extension of five-year leases has rendered their attendance of less importance.

COMPLAINTS.

67. Complaints of wrong assessment, received in this year or pending from the previous year, rose in number from 6,021 to 6,478, and miscellaneous complaints from 403 to *2,357: 625 complaints of wrong assessment and *146 miscellaneous had not been disposed of at the end of the year.

An analysis of the assessment-complaints is given in the Superintending Engineer's report, from which it appears that, excluding 1,344 complaints in the Ageaon subdivision, where the office registers were destroyed by fire, and which therefore cannot be classified, the applicants in 1,612 cases alleged that their crops had not been irrigated; in 1,121 that they had suffered from deficiency of supply; in 831 that they had been over-measured; and in 673 that they had been assessed under wrong names. Out of the 6,123 assessment-complaints disposed of, remissions were allowed in 2,285, or 37·3 per cent. In the previous year the percentage was 42·5. Of the other complaints, 31 related to drainage.

APPEALS

68. 41 appeals against the decisions of canal officers were preferred before the Collectors, of which 15 were wholly or partially allowed, 20 dismissed, and 6 are pending.

CERTIFICATE PROCEDURE.

69. The number of certificates filed during the year in the Patna district increased from 2,542 to 3,802, and in Shahabad fell from 8,826 to 1,617. In the former district 2,421 cases were pending from the previous year, giving a total of 6,223; of these, only 2,178 were disposed of, leaving a balance pending of 4,045. Nothing is said as to how they were disposed of, or what sum was realised on them. The Collector states that the amount covered by the 3,802 certificates was Rs. 13,811. On account of the slow progress additional mohurirs were appointed to assist in the certificate department in the latter part of the year. It is stated that progress has since improved. The circle officer of Gya states that in that district the collections under the certificate procedure amounted to only Rs. 307.

The information on this point given by the Collector of Shahabad is very complete, and is embodied in the following table:—

	1886-87.		1887-88.	
	Number.	Amount.	Number.	Amount.
		Rs.		Rs.
Cases for disposal—				
1. Cases pending at the close of the preceding year ...	8,089	25,360	6,692	44,195
2. Cases instituted during the year	8,826	72,112	1,617	25,295
Total ...	16,915	97,472	8,309	69,490
Cases disposed of—				
1. By being struck off owing to the demand having been remitted	1,054	5,491	2,846	16,054
2. By being wholly satisfied	9,169	47,786	4 496	35,293
Total ...	10,223	53,277	7,342	51,547
Balance outstanding at the close of the year	6,692	44,195	967	17,943

On these results the Collector offers the following remarks:—

"The above figures speak for themselves and show satisfactory results. The institutions were considerably less in number than usual owing to the arrears having been considerably reduced at the close of 1886-87, while the disposals were considerably larger than the institutions, and consequently the balance small. It will be seen that a large number of cases was struck off. These covered bad and irrecoverable debts."

The Commissioner will be asked to have information in other districts given in a similar form in future.

* Exclusive of those in the Ageaon subdivision, the records of which were destroyed by fire.

NAVIGATION RECEIPTS.

70. The tables below show the navigation revenue and tollage receipts for the last five years:—

NAVIGATION RECEIPTS.

Year.	Eastern Main Series.			Western Main Series.			Total.	Total tollage only.
	Number of miles open.	Tollage receipts.	Transport service receipts.	Number of miles open.	Tollage receipts.	Transport service receipts.		
	No.	Rs.	Rs.	No.	Rs.	Rs.	Rs.	Rs.
1883-84	86½	22,563	6,305	132¼	25,460	30,856	85,193	48,033
1884-85	86½	23,055	1,304	132¼	14,280	13,122	51,761	37,335
1885-86	86½	19,579	......	132¼	22,133	4,531	46,243	41,712
1886-87	86½	22,506	54*	132¼	27,159	4,535*	54,254	49,665
1887-88	86½	27,622	95*	132¼	23,362	4,825*	55,904	50,984

* There is no longer any Government transport service; these receipts are on account of hire of steamers, ferries and sundries.

TOLLAGE (ASSESSED).

Year.	Patna Canal System—Eastern Main Canal Series.	Arrah Canal System.	Buxar Canal System.	Total.
	Rs.	Rs.	Rs.	Rs.
1883-84	22,206	19,791	5,593	47,590
1884-85	23,142	10,316	3,937	37,395
1885-86	19,523	14,808	7,388	41,719
1886-87	22,646	18,289	9,001	49,936
1887-88	28,206	15,306	8,030	51,542

TRAFFIC.

71. COMPARISON OF TRAFFIC.

		1887-88.	1886-87.	1885-86.	1884-85.	1883-84.
Number of miles open ...	No.	218½	218½	218½	218½	218½
Toll collections	Rs.	51,542	49,936	41,719	37,395	47,590
Rate of toll per mile ...	,,	236	229	191	171	218
Boats, including empties ...	No	8,116	8,573	7,210	6,434	8,822
Tonnage of boats	Tons.	95,082	104,835	77,006	61,744	95,474
Estimated value of cargo, including rafts	Rs.	56,80,508	64,65,651	36,41,863	41,10,598	62,54,476

There has been a falling off in the traffic during the year, whilst there has been a small increase to the total tollage assessed. On the Patna Canal system there is an increase in every way, and the increase in tollage amounts to Rs. 5,560, largely due to the extended rafting operations between Baroon and Patna. On the Arrah and Buxar Canals systems there is a decrease under all heads; and when the number of years during which the canals have been open to navigation is considered, the want of elasticity shown in these returns is discouraging. The decrease in the ton-mileage is relatively smaller than the decrease in tonnage, showing that longer trips were on the average made.

NAVIGATION ESTABLISHMENT.

72. The cost of the establishment employed on navigation was Rs. 13,212 against Rs. 13,379 in the previous year.

TRANSPORT SERVICE.

73. The transport service, which is managed by a contractor, continues to be maintained with regularity, and is popular.

MISCELLANEOUS RECEIPTS.

74. The miscellaneous receipts for the last five years are given in the following table:—

	1887-88.	1886-87.	1885-86.	1884-85.	1883-84.
	Rs.	Rs.	Rs.	Rs.	Rs.
Sale of water	370	702	1,742	582	399
Plantations	394	319	307	178	107
Other canal produce	2,145	2,904	2,424	1,339	2,047
Water power	708	668	469	488	857
Rent of buildings	7,197	7,198	7,213	6,409	6,305
Fines	317	169	653	734	778
MISCELLANEOUS. Rent of lands ...	10,997	15,231	14,369	13,770	13,322
MISCELLANEOUS. Fisheries	502	565	421	732	350
MISCELLANEOUS. Cost of process ...	2,474	6,302	6,414	7,066	4 218
MISCELLANEOUS. Sale of old materials ...	60	443	356	405	55
MISCELLANEOUS. Other items ...	3,295	3,213	3,713	8,651	5,967
Total ...	28,459	37,714	38,080	40 354	34,405

The chief decreases will be observed under "Rent of lands," of which the explanation is that it has been found necessary to retain possession of land required for repair purposes, owing to difficulties experienced in dispossessing the occupants when required; and under "Cost of processes," probably due to the issue of fewer certificates by the Collector.

PLANTATIONS

75. The state of the plantations in each Division at the close of the years 1886-87 and 1887-88 is shown in the statement following:—

DIVISION.	1887-88.				1886-87.					
	Trees over 12 feet in height.	Saplings between 4 and 12 feet.	Seedlings under 4 feet.	Total.	Trees over 12 feet in height.	Saplings between 4 and 12 feet	Seedlings under 4 feet.	Total.	Increase.	Decrease.
	No.	No.	No.	No.	No.	No.	No.	No.	No.	No.
Eastern Sone	64,280	28,334	59,440	152,054	68,036	43,020	48,741	159,797	...	7,743
Arrah	31,503	15,274	54,244	101,021	28,702	11,820	52,935	93,457	7,564	.
Buxar	9,603	14,765	18,327	42,785	9,899	5,156	12,263	27,318	15,467	. .
Total ...	105,476	58,373	132,011	295,860	106,637	59,996	113,939	280,572	23,031	7,743

The expenditure on plantations was Rs. 8,300* and the receipts Rs. 394, against Rs. 5,189 and Rs. 319, the respective amounts in the previous year It is pointed out that it has not been usual to credit plantations with the value of trees cut down and used for lime manufacture and similar work. Orders have since been issued on the subject, and the value of such trees will in future be charged against the works on which they are used.

* The amount shown by the Examiner is Rs. 7,178, he having charged expenditure on the new plantations at Dehree to head works.

FINANCIAL RESULTS

76. The receipts on revenue account and working expenses (direct charges) of the Sone Canals for the year 1887-88 and the four preceding years are shown in the statement below:—

	1887-88.	1886-87.	1885-86.	1884-85.	1883-84.
	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts—					
Water-rates	5,19,586	8,26,461	9,78,323	7,70,359	4,81,209
Navigation	55,904	54,254	46,243	51,761	85,193
Miscellaneous	28,459	37,714	38,080	40,354	34,405
Total ...	6,03,949	9,18,429	10,62,646	8,62,474	6,03,807
Working expenses—					
Maintenance	5,52,428	4,07,529	3,80,929	4,50,313	3,74,795
Irrigation establishment ...	1,35,243	1,43,660	1,46,028	1,29,308	1,14,005
Navigation ditto	14,308	14,535	14,756	16,885	20,248
Refunds of revenue	15,331	15,737	10,657	7,455	5,429
Total ...	7,17,310	5,81,461	5,52,370	6,03,961	5,14,477
Net profit, exclusive of indirect charges	(—)1,13,361	3,36,968	5,10,276	2,58,513	89,330

The change of a net revenue of nearly $3\frac{1}{2}$ lakhs to a deficit of over 1 lakh is mainly due to the falling off in the water-rates, and the increase from some Rs. 71,000 to Rs. 2.10,000, for the direction, account and executive, under the new system as already explained.

REPAIRS TO HEAD-WORKS.

77. The cost of repairs to head-works during the last five years was as follows:—

	1887-88.	1886-87.	1885-86.	1884-85.	1883-84.
	Rs.	Rs.	Rs.	Rs.	Rs.
Sone weir ...	47,150	68,570	34 908	29,922	18,848
Other works ...	12,997	10,419	7,697	9,462	9,861
Total ...	60,147	78,989	42,605	39,384	28,709

The outlay on the Sone weir was again swollen by payments in connection with the rebuilding of the river sluices. Excluding these special repairs, it was Rs. 25,139 only. The excess on 'other works' occurs chiefly in the repairs of the head-sluice and on station roads.

MAINTENANCE OF MAIN CANALS AND DISTRIBUTARIES.

78. The outlay on main canals and distributaries in each division can be compared below:—

	Arrah Division.		Buxar Division.		Eastern Sone Division.	
	1887-88.	1886-87.	1887-88.	1886-87.	1887-88.	1886-87
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs
Western Main Canal	42,388	36,928	10,456	9,054		..
Eastern ditto	..		....	..	30,672	16,167
Canals	25,717	29,796	11,686	18,454	26,395	24,090
Branch canals	16,874	11,796	12,710	12,863	..	..
Distributaries .	27,136	25,434	12,604	17,778	19,806	15,879
Drainage and protective works	3,044	1,932	388	1,090	2,944	2,130
Total	1,15,159	1,05,885	47,844	60,130	79,817	58,266

These figures are taken from the Superintending Engineer's report, and agree with those of the Examiner. The cost of maintenance, excluding head-works and telegraph lines, is Rs. 2,42,820 against Rs. 2,24,290 shown last year.

SILT-CLEARING AND DREDGING.

79. On the Eastern and Western Main canals the excess occurs under silt-clearing and dredging. The former canal was closed for one month at the beginning of the year, and about two lakhs of cubic feet were cleared by hand. The large accumulation of silt deposited in the main canals during the rains was a consequence of the high discharges which it was necessary to keep up for irrigation purposes at a time when the Sone was in flood and its waters consequently heavily silt-laden.

The quantity of silt dredged from the main canals, and the rate at which the work was done, are given below:—

CANAL.	1887-88.			1886-87.		
	Cubic feet dredged	Cost, including removal over spoil bank, or discharge into river.	Rate per 1,000 cubic feet.	Cubic feet dredged.	Cost, including removal.	Rate per 1,000 cubic feet.
		Rs.	Rs. A. P.		Rs.	Rs. A. P.
Eastern Main ...	3,056,923	17,521	5 11 6	1,864,643	8,500	4 8 11
Western Main ...	7,769,055	46,019	5 14 10	4,170,601	30,946	7 6 6

The cost of removal, as shown above, varies with the height of the spoil bank over which the silt has to be carried, or the distance of the river from the point at which the dredging takes place. The cost of dredging alone increased in the Eastern Sone Division from Re. 1-1 6 to Re. 1-9-8 per thousand cubic feet, the rise being due to the use of coal instead of wood. In the Arrah Division, the rate, inclusive of the delivery of the silt in punts at the side of the canal, was stated in the report of last year at Rs. 3-8-11 per thousand cubic feet. In the report now received, the average rate at which the same work was done in 1887-88 is returned at Rs. 2-3, of which 5 annas is the proportion of cost incurred in the haulage of the punts. Reasons are not given for the fall thus apparent in the rate.

The Superintending Engineer has given some very interesting information in connection with the working of the various classes of dredgers. From this

it would appear that the Fouracres' type of dredger is the most suitable for the work, as four of them excavated 2,035,870 cubic feet of silt at an average rate of Rs. 4·5 per thousand cubic feet and at a cost of repairs (deduced from the total cost on 12 of them) of Rs. 2,488, as against one English dredger's work of 1,021,053 cubic feet excavated at an average rate of Rs. 5-11-6 per thousand cubic feet and at a cost in repairs (deduced from the total expenditure on two of them) of Rs. 1,449. It is, however, impossible to make a complete comparison without introducing a charge for interest and depreciation, and although the Superintending Engineer in his last year's report gave figures for these, they were for a whole year; whereas it is clear that the factor of time during which the dredger was at work or laid up on account of that work cannot be neglected, and this important item cannot be obtained from the data given by the Superintending Engineer.

The quantity and cost of silt clearances by hand in the Eastern Main Canal is as follows :—

	1887-88.			1886-87.		
	Cubic feet cleared by hand.	Cost.	Rate.	Cubic feet cleared by hand.	Cost.	Rate.
		Rs.	Rs. A. P.		Rs.	Rs. A. P.
Eastern Main	1,981,162	9,081	4 13 6	1,105,522	4,887	4 6 4

In both years the quantity cleared on the Western Main Canal was inconsiderable.

Apart from the outlay on main canals, the cost of maintenance shows, on the Arrah Division, an increase of Rs 3,814, which can again be traced to silt-clearance; while in the Buxar Division, where, as noted last year, the repair work done in 1886-87 was unusually large, there is a decrease of Rs. 13,697. In the Eastern Sone Division there is an increase of Rs. 7,046, occurring partly under 'Earthwork,' due to the raising in places of the banks of the Patna canal and the resectioning of those of some distributaries, and partly under 'Contingencies,' to which the cost of a fresh demarcation of distributary lands, which was found necessary, was charged.

WEED-CLEARING.

80. The cost of weed-clearing increased by Rs. 318 :—

	1887-88.	1886-87.	1885-86.	1884-85.	1883-84
	Rs	Rs.	Rs.	Rs.	Rs.
Eastern Sone Division	558	314	2,116	1,589	2,777
Arrah Division	3,342	2,218	2,491	3,976	5,948
Buxar Division	1,015	2,065	77	......	270
Total ...	4,915	4,597	4,683	5,565	8,995

MILEAGE RATES OF REPAIRS.

81. Mileage rates of cost of repairs are worked out below both for canals and distributaries, and compared with the rates of previous years.

Canal.	Division.	1887-88.		1886-87.		1885-86	
		Number of miles.	Cost per mile.	Number of miles.	Cost per mile.	Number of miles.	Cost per mile.
		No.	Rs.	No.	Rs	No.	Rs
Eastern Main Canal ...	Eastern Sone ...	7¼	4,230	7¼	2,215	7¼	4,071
Western ditto ...	Arrah ...	5	8,177	5	7,385	5	12,857
	Buxar ...	16¾	633	16¾	546	16¾	256
Buxar Canal ...	Do.	45¼	258	45¼	406	45¼	209
Patna do.	Eastern Sone ...	79	384	79	305	[illegible]	268
Arrah do. ...	Arrah	65	392	65	455	65	359
Doomraon Branch ...	Do. ...	40½	242	40½	152	40½	179
Behea do.	Do.	31	229	31	182	31	188
Chowsa do ...	Buxar ...	39½	195	39½	200	39½	156
Gurra Chowbey Branch ...	Do.	38	131	38	131	38	78
Distributaries	Arrah ...	467½	58	467½	54	469	66
	Buxar ...	341¼	37	338¾	53	333¾	40
	Eastern Sone ...	358	55	357	45	352	39

The principal causes of increase in expenditure and consequently in rates per mile on canals and distributaries in the several divisions have already been explained, and it is therefore unnecessary to repeat the explanation here.

CLOSURES.

82. The Eastern Main series were closed from the 17th April to the 16th May 1887, and the Western Main series from the 15th May to the 20th May.

FLOODS.

83. There were no floods of importance, the river rose rather more than one foot higher than its highest level of last year.

CALCUTTA AND EASTERN CANALS.

84. The manner in which the duties of maintaining and administering these canals are distributed between the Executive Engineer and the Collector and Supervisor was described in last year's report, and no change has been made.

CAPITAL ACCOUNT.

The Capital and Revenue Accounts are given below:—

1.—CAPITAL ACCOUNT.

HEADS OF ACCOUNT.	Outlay during 1887-88.	Outlay to end of 1887-88.
DIRECT CHARGES.	Rs.	Rs.
Old outlay prior to the year 1861-62	...	24,91,012
I.—Works	7,607	19,94,865

Profit	3,67,622	1,24,44,193			
Total ...	5,79,934	1,96,75,285		5,79,934	1,96,75,285

The above statement is exclusive of indirect charges.

INTEREST ACCOUNT.

There is no interest account, the whole expenditure having been defrayed from Provincial funds.

85. The following statement shows the financial results of those canals for the last ten years. The figures are for direct charges only:— FINANCIAL RESULTS

YEAR.	DIRECT CAPITAL CHARGES.		DIRECT RECEIPTS AND OUTLAY.			Percentage of net direct revenue to direct capital expenditure to end of year.
	During the year.	To end of the year.	Gross revenue.	Direct charges.	Net revenue.	
	Rs.	Rs.	Rs.	Rs.	Rs.	
1878-79 ...	1,38,127	33,06,289	4,01,535	1,70,264	2 31,271	6·9

1881-82 ...	5,50,123	47,25,088	4,82,467	3,27,254	1,55,213	3 2
1882-83 ...	3,15,059	50,40,147	5,64,194	3,20,265	2,43,929	4 8
1883-84 ...	1,52,297	51,92,444	5,64,101	2, 0,624	3,43,477	6·6
1884-85 ...	9,197	52,01,641	(a) 5,69,726	2,78,192	2,91,534	5 6
1885-86 ...	(—) 42,574	51,59,067	(b) 4,79,484	1,86,747	2,92,737	5 7
1886-87 ...	5,156	51,64,223	4,83,654	1,82,888	3,00,766	5 8
1887-88 ...	15,343	51,79,566	5,79,934	2,12,312	3,07,622	7·1

(a) Is Rs. 35,185 larger than it should be by reason of error of account.
(b) Is Rs. 35,185 smaller ditto ditto ditto.

Both the gross and net revenues are the largest since 1876-77 inclusive, and probably the largest that have ever been realised, although the percentage of net direct revenue to direct expenditure on capital account has been once higher, viz. in 1877-78, when it was 8·1 per cent. But the expenditure on capital account up to the close of that year was only Rs. 31,68,162, against Rs. 51,79,566 now. The expenditure, though larger than that of the previous two years, is still some Rs. 15,000 below the average of the previous ten years. Including indirect charges, the net revenue gives a return of 6 78 on the expenditure under capital account.

86. The following statement shows the details of the revenue collections during the year :— COLLECTIONS.

CANALS.	Number of boats and rafts.	COLLECTIONS BY COLLECTOR AND SUPERVISOR.						COLLECTIONS BY EXECUTIVE ENGINEER	GRAND TOTAL, GROSS REVENUE
		Tolls from boats and rafts.	Demurrage.	Ferry tolls.	Tolls from steamers and flats.	Rents of buildings, lands, and other miscellaneous receipts.	Total.	Rents of buildings, lands and other miscellaneous receipts	
	No.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs	Rs
Calcutta and Eastern Canals.	88,987	4,21,074	3,998	2,197	4,445	2,914	4,35,528	1,646	4,37 174
Tolly's Nullah .	80,044	1,40,431	1,024	697	.	608	1,42 760	.	1 42 760
Total 1887-88 .	169,031*	5,62,405	5,022	2,894	4,445	3,522	5,78,288	1,646	5,79,934
Total 1886-87 ..	145,768	4,68,082	746	3,538	4,365	4,317	4,81,048	2,606	4,83,654

* Inclusive of empty and passenger boats.

The increase in the gross revenue occurs entirely in receipts derived from the traffic. On other sources of receipt there is a decrease, chiefly caused by the transfer of surplus canal lands to the Civil Department, where the proceeds are now credited.

87. The following statement shows the number of the different classes of boats which passed through the canals during the year :— BOATS

	NUMBER OF BOATS OF THE FOLLOWING MEASUREMENT BY CANAL RULES.					
	Up to 100 maunds.	Between 100 and 1,000 maunds.	Between 1,000 and 2,500 maunds.	Between 2,500 and 5,000 maunds.	Over 5,000 maunds	TOTAL
Calcutta and Eastern Canals .	34,968	30,858	21,227	1,809	89	88,959
Tolly's Nullah .. .	18,244	24,798	7,202	59	...	50,298
Boats not classed, but being mostly small boats of less than 100 maunds paying toll at Russah	..	.		..		29,641
Total 1887-88 ..	53,212	55,656	28,429	1,868	89	168,898
Total 1886-87 ...	48,989	43,777	22,461	1,805	49	145,611

An increase of 23,287 has thus taken place in the number of boats, to which every class of boats has contributed. Regarding the small boats which enter Tolly's Nullah at Russah, the Superintending Engineer notices that,

though there is an increase in numbers, it is accompanied by a slight falling off in toll collections. The cause of this is found in the deterioration of the Kaurapokur khall, a feeder which has not hitherto been included in the Calcutta and Eastern System of canals. A survey of this khall has now been ordered with a view to its improvement and future maintenance by Government.

TRAFFIC.

88. The increase in the tonnage of the boats and in the weight and value of the cargoes is apparent in the following comparison of the results of three years:—

		Number of boats.	Tonnage of boats by canal measurement.	Weight of cargo carried.	Value of cargo carried.	Tollage, including demurrage.	Percentage of toll on value of cargo.
		No.	Tons.	Tons.	Rs.	Rs.	
1887-88	Calcutta Canals ...	88,412	2,065,967	696,752	4,78,97,746	4,30,417	
	Tolly's Nullah ...	79,328	914,938	259,775	1,56,64,747	1,41,455	
	Total ..	167,740	2,980,905	956,527	6,35,62,493	5,71,872	0·89
1886-87	Calcutta Canals ...	75,720	1,704,802	645,250	4,19,81,723	3,63,798	
	Tolly's Nullah ...	70,048	618,460	215,684	1,10,60,947	1,09,395	
	Total ...	145,768	2,323,262	860,934	5,30,42,670	4,73,193	0·89
1885-86	Calcutta Canals ...	74,715	1,819,746	676,046	4,75,39,002	3,83,057	
	Tolly's Nullah ...	72,344	654,653	387,097	1,25,64,300	1,09,156	
	Total ...	147,059	2,474,399	1,063,143	6,01,03,302	4,92,213	0·82

A reference to form IID of the statistical table makes it evident that the expansion has taken place in the grain and jute traffic, the latter being included under "Miscellaneous." Of rice, 355,240 tons were carried, against 240,756 tons in the year previous. Jute has risen from 90,416 tons to 124,630 tons. Other branches of trade have either remained steady or shown decreases.

TOLLS ON STEAMERS AND FLATS.

89. The tollage realised on steamers and flats using the Sunderbund route was Rs. 4,445 against Rs. 4,365, and was collected on 889 vessels against 873 in the previous year.

MISSING TICKETS.

90. Of missing tickets there were 677 against 542 of the previous year. The increase occurs chiefly at the Dhappa and Russah toll stations on tickets issued for Tolly's Nullah, that being an open channel from which the boats have opportunities of escaping. On the whole, the missing tickets are few in proportion to the number of boats frequenting the canals, and the check now exercised over the toll collections is much better than under the system of former years.

REVENUE ESTABLISHMENT.

91. The table below compares the entire cost of the revenue establishment under the Collector and Supervisor with the gross collections made by him:—

	Gross collections made by Supervisor.	Cost of entire revenue establishment.	Percentage.
	Rs.	Rs.	
1887-88	5,78,288	38,920	6·73
1886-87	4,81,048	42,714	8·84
1885-86	5,13,839	44,751	8·70

There has been an increase of Rs. 1,868 in the salary of the Supervisor, due to increased toll collections and consequent increase in commission payable to him. This, however, has been more than counterbalanced by the savings on most of the other sub-heads, regarding which the Superintending Engineer reports:—"The decrease in the salary of Inspectors is owing to the abolition of the Chitpore Inspectorship and saving from the pay of the Russa Inspector on furlough since December 1887. Reductions have also been effected in office establishment, canal police and domes. The decrease in contingencies is caused by there being no office rent to pay during the year, as the office has been removed to a building belonging to Government."

The result of the reduction in cost of establishment, whilst there has been a large increase in the number of boats measured, is that the cost per boat measured has fallen from 4·69 annas to 3·68 annas.

MAINTENANCE CHARGES.

92. The charges (direct and indirect) of the year, inclusive of the cost of the extensions and improvements carried out, come to Rs. 2,24,656, against 1,92,264 for 1886-87. The summary below shows that the excess has occurred mainly under establishment and tools and plant:—

	1887-88.	1886-87.
	Rs.	Rs.
Extensions and improvements	1,478	5,092
Maintenance and repairs	1,04,527	1,02,480
Establishment	88,168	66,969
Tools and plant	18,139	8,347
Indirect charges	12,344	9,376
Total ...	2,24,656	1,92,264

The increase under establishment is an increase only of account. The increase under tools and plant is due to heavy expenditure incurred on the dredging plant. Regarding maintenance, extensive repairs were again carried out on the bridges over Tolly's Nullah, while the expenditure on repairing and protecting the canal banks was Rs. 19,921 against Rs. 11,521. The cost of maintaining the steamer route was increased by the necessity of blowing up two wrecks, which were a source of danger in the channel. The work was carried out for Rs. 6,317, of which Rs. 3,000 was paid within the year.

DREDGING.

93. 350,700 cubic feet of silt were removed by the dredgers at an average rate of Rs. 9 8-4 per thousand. The corresponding rate during 1886-87, when 985,650 cubic feet were removed, was Rs. 8-13.

ORISSA COAST CANAL.

CAPITAL ACCOUNT

94. The following statement shows the Capital and Revenue Accounts of this canal:—

I.—CAPITAL ACCOUNT.

Heads of Account.	Outlay during 1887-88.	Outlay to end of 1887-88.
Direct Charges.	Rs.	Rs.
I.—Works	2,38,059	31,48,801
II.—Establishment	58,885	7,01,158
III.—Tools and plant	34,425	1,71,352
IV.—Suspense accounts	(—)8,860	38,222
Total ...	3,22,509	40,59,533
V.—*Less* receipts on Capital Account	407	3,271
Net total ...	3,22,102	40,56,262
Indirect Charges.		
Capitalised abatement of land revenue	54	784
Leave and pension allowances	8,244	98,077
Total indirect charges ...	8,298	98,861

The original estimate sanctioned for the Orissa Coast Canal amounted, including indirect charges, to Rs. 36,02,297, which has been exceeded by the expenditure already incurred. A revised estimate of Rs. 44,74,941 has recently been submitted for the approval of the Government of India. The canal is now in full work, and, with the exception of perfecting arrangements for feeding Range IV B by means of an iron supply-pipe, the provision of dredging plant, some earthwork in bed which it is proposed to remove by dredging, and some minor works, may be considered practically complete.

The expenditure has been entirely from Provincial Funds, with the exception of Rs. 8,66,000 contributed from Imperial Protective Funds. There is not interest account.

REVENUE ACCOUNT

II.—REVENUE ACCOUNT (ACTUALS).

	Expenditure.			Receipts.	
	During 1887-88.	To end of 1887-88.		During 1887-88.	To end of 1887-88.
I.—Maintenance and Repairs.	Rs.	Rs.		Rs.	Rs.
Maintenance and repairs	53,277	1,20,401	Navigation ...	52,828	95,078
Establishment, including direction and accounts.	14,289	29,735	Miscellaneous ...	1,026	1,982
Tools and plant ...	8,743	12,966			
Total ...	76,309	1,63,102	Total receipts ...	53,8[illegible]4	97,060
II.—Revenue management.					
Navigation establishment.	4,559	7,351	Deficit ...	27,031	73,410
III.—Refunds of revenue	17	17			
Total working expenses	80,885	1,70,470	Total ...	80,885	1,70,470

During 1886-87, 91 miles were temporarily opened for traffic for 5½ months. For that year the receipts were Rs. 29,488 and the working expenses Rs. 59,704, showing a deficit of Rs. 30,216. On the 1st September 1887 the canal was opened to traffic throughout its entire length of 97½ miles.

The receipts show that the traffic is being steadily developed. The expenditure, on the other hand, was abnormally increased by the necessity of making good the damage caused by the cyclone of May 1887. As the canal was entirely open for only a part of the year, calculations of the mileage rate of repairs and a detailed comparison of the expenditure with that in previous years are for the present unnecessary, although it may be mentioned that the increase of tolls on all the ranges shows that all have participated in the advantage of the through opening.

The usual information regarding the traffic will be found in tables I and IID. These do not appear to call for comment at present, but it is satisfactory to note that the number of boats has increased by nearly 3,000, or nearly 33 per cent.; their registered tonnage by more than 52,000 tons, or 70 per cent., whilst the ton-mileage and value of cargo have nearly doubled. The number of passengers rose from 6,110 to 29,704, probably due in great measure to the losses of sea-going steamers.

SARUN CANALS.

CAPITAL ACCOUNT

95. The Capital and Revenue Accounts of these canals are given below:—

I.—CAPITAL ACCOUNT.

Heads of Account.	Outlay during 1887-88.	Outlay to end of 1887-88.
	Rs.	Rs.
Direct Charges.		
Works	......	4,79,946
Establishment	......	1,64,170
Tools and plant	......	25,612
Total	......	6,69,728
Less—Receipts on Capital Account	......	498
Net Total ...	......	6,69,230
Indirect Charges.		
Capitalised abatement of land revenue	......	97
Leave and pension allowances	......	27,086
Total indirect charges ...	......	27,183

There is a difference in the total number of boats as returned by the Commissioner and as compiled from the monthly traffic statements. Both the above tables agree, however, in showing a decrease of close on 1,000 boats; the decline in the assessments being Rs. 4,337, or 2·14 per cent. The receipts no doubt suffered mainly because, of the three channels which furnish alternative routes to traffic, it was found during the low water season that only one (the Bhyrub-Jellinghee) could be maintained in a navigable condition. The entrance to the Bhagirathi became so deteriorated that the reading on the Berhampur gauge fell to 1′ 9″ above zero on the 30th January 1888, whereas on the same date in 1887 it was 4′ 11.″ The steamer service was with difficulty maintained as far as Cutwa. Further deterioration of the entrance of the Matabhanga also rendered it impracticable to keep it open for navigation, although a sufficient supply for drinking purposes was passed down.

On the Bhyrub-Jellinghee the collections were greater by Rs. 2,991, the increase occurring chiefly under gram, pulse, and rafted timber. The falling off on the Bhagirathi was Rs. 3,395, occurring chiefly under salt; and on the Matabhanga Rs. 4,045, under rice and jute.

CHARGES

103. The charges against revenue for the past five years are detailed in the following statement:—

Year.	Charges in Public Works Department.							Charges in Civil Department.	Grand Total.
	Works	Maintenance and repairs.	Working Government steamers	Petty items	Establishment.	Tools and plant.	Total.	Charges for collection.	
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1883-84	1,031	81,618	543	352	10,207	(—)1,502	1,01,249	21,129	1,22,378
1884-85	30	57,579	935	2,276	13,076	1,749	76,645	20,790	97,335
1885-86	.	42,124	800	1,422	9,801	1,759	56,006	21,062	77,068
1886-87 ..	...	26,327	1,800	1,984	6,065	1,409	37,585	22,628	60,213
1887-88		47,262	..	(—)778	19,749	3,593	69,846	22,176	92,022

Regarding the greater cost of maintenance and repairs, the Superintending Engineer explains that Rs. 37,073 (as against Rs. 17,744 in 1886-87) was spent in training the Bhagirathi river, though, as already pointed out, the efforts to keep this channel open during the dry season resulted in failure. The share of establishment charges allotted against the works in the Public Works Department has increased by over Rs. 13,000.

COLLECTION CHARGES

104. In the cost of collection incurred in the civil department a reduction of Rs. 452 has been effected, but on account of the falling off in the gross revenue the percentage has risen from 11·1 to 11·2. The cost per boat measured is about the same as last year, viz. 5·4 annas.

EDEN CANAL.

105. There are no capital or revenue accounts for this canal, which has been constructed entirely from Provincial funds, and has for its primary object the supply of drinking water to the villages on its banks and in the neighbourhood of the various minor natural channels supplied by it. It is also the source of supply for the Burdwan water-works.

EXPENDITURE

106. The expenditure for the year was as follows:—

	Rs.
Works	8,628
Maintenance and repairs	20,498
Establishment and tools and plant	12,643
Total ...	41,769

against an expenditure of Rs. 48,424 in the previous year. The repairs, &c., were of the usual nature.

REVENUE

107. The revenue derived was Rs. 918, against Rs. 810 in the previous year, and was entirely on miscellaneous account. No workable scheme for regular irrigation from this canal has yet been submitted.

MADHUBAN CANAL.

108. This is a small provincial work, for which no capital or revenue accounts are kept. There was no irrigation from the canal owing to the breach in the weir mentioned in last year's report.

EXPENDITURE.

109. The expenditure for the year was as follows:—

	Rs.
Works	4,729
Maintenance	1,810
Establishment and tools and plant	3,282
Total ...	9,821

that for the previous year was Rs. 6,941, there being increments in all items, but especially in establishment. The masonry of the Teur weir was completed before the rains, and the whole work practically finished by the close of the official year.

REVENUE.

110. The only receipts were Rs. 9 for fishing rents.

GENERAL REMARKS.

NET INCOME.

111. There has been a deficit in the year 1887-88 in working the Major Irrigation Works in Bengal, amounting to Rs. 4,00,356, thus:—

	Rs.
Gross direct receipts	11,03,229
Ditto charges	15,03,585
Deficit ...	4,00,356

The budget estimate for net revenue was (—) Rs. 92,000, and the revised estimate was (—) Rs. 1,67,000, thus:—

	Budget.	Revised estimate.
	Rs.	Rs.
Direct receipts	13,58,000	13,58,000
" charges	14,50,000	15,25,000
Net revenue ...	(—) 92,000	(—) 1,67,000

It will thus be seen that a considerable defect in the year's working was anticipated, but the actual deficit is more than double this, and is wholly due to the failure in the collections, the charges having been somewhat under what had been estimated. The short realisations were practically wholly on the Sone Canals and under water-rates, the irrigation receipts being more than $2\frac{1}{2}$ lakhs short of the revised estimate. This serious defect was in a great measure due to the collections in the last few months of the year having been very far below the usual proportional amount collected in those months. Still a very grave oversight was undoubtedly made in not altering the figures in the revised estimate, when it was clear not only that the arrear balance was smaller than in the previous year and hence that the total amount to be collected was also probably smaller but that the collections were getting far behindhand, and that the agitation which brought about the enquiry into the Sone Canal system was affecting in a most marked manner the realisation of the revenue.

EARNINGS

112. The principal results of the year, based upon the "Earnings," as compared with similar results of the previous year, are shown in the following statement:—

	1886-87.	1887-88.
	Rs.	Rs.
Orissa Canals	(—) 2,93,621	(—) 2,45.842
Midnapore Canal	5,729	6,007
Hidgellee Tidal Canal	31,569	(—) 23,037
Sone Canals	2,05,593	92,863
	(—) 50,730	(—) 1,70,009

The expenditure has been wholly against Provincial funds.

II.—REVENUE ACCOUNT (ACTUALS).

REVENUE ACCOUNTS.

	Expenditure.			Receipts.	
	During 1887-88.	To end of 1887-88.		During 1887-88.	To end of 1887-88.
	Rs.	Rs.		Rs.	Rs.
Maintenance and repairs	18,601	1,68,808	Water-rates ...	21,070	1,31,736
Establishment ...	9,119	43,663	Navigation ...	....	263
Tools and plant ...	400	(—)7,504	Miscellaneous ...	(—)405	7,042
			Total ...	20,665	1,39,041
			Deficit ...	7,455	65,926
Total ...	28,120	2,04,967		28,120	2,04,967

The working expenses, as shown in this statement, are greater than those of the previous year, which were returned at Rs. 27,903. It is as well to note, however, that greater economy was observed in the actual repairs, which cost Rs. 18,601 in 1887-88, as against Rs. 23,481 in 1886-87, and that the excess takes place entirely in the share of establishment charges allotted to the work, which was Rs. 9,119 as against Rs. 5,400.

MAINTENANCE.

96. Among the maintenance charges there is an item of Rs. 681, the cost of a new sluice built under the Sarun-Gunduk embankment to drain impounded water. Of silt, 1,489,900 cubic feet were cleared from the channels at an average rate of Rs. 3-10. In 1886-87 the quantity was 2,359,940 cubic feet, and the average rate Rs. 3-8.

IRRIGATION.

97. These canals were constructed primarily for the supply of water for indigo manufacture. The irrigation is conducted by the gentlemen appointed to be canal managers, who are also the guarantors of the revenue. 4,218 acres were irrigated, of which 1,699 acres were paddy and 2,193 were rabi, including opium. The Superintending Engineer reports that during the rabi season there was a large demand for water for indigo sowings. 105 cubic feet per second was the average discharge supplied during the kharif months and 201 during the rabi months.

The areas irrigated for all years since 1881-82 are as follow:—

1881-82	666
1882-83	1,741
1883-84	21,122
1884-85	7,223
1885-86	4,565
1886-87	2,146
1887-88	4,218

COLLECTIONS.

98. The annual amount for which the guarantors have made themselves liable is Rs. 21,850. The actual amount collected during the year was Rs. 21,070, so that there is an increase in the arrear balance shown at the end of the year. The following statement of account is taken from the Superintending Engineer's report:—

	Rs.
Balance unrecovered on April 1887	23,541
Assessment of the yearly guarantee	21,850
Miscellaneous revenue by Executive Engineer	—405*
Net demand ...	44,986
Recovered on account of guarantee or water-rate	21,070
Recovered by Executive Engineer	—405
Total Collections ...	20,665
Balance on 31st April 1888	24,321

* A minus quantity made in rectification of an error in the previous year's accounts.

The results of the collections is considered by the Commissioner to be unsatisfactory, and guarantors have been called on to pay the balance of their dues without further delay.

Expiry of guarantee.

99. A proposal has been made to increase the efficiency of these canals by the construction of a masonry dam to force the water of the Sota into the Gundaki channel, at a cost to Government of Rs. 48,307. The expediency of incurring this expenditure will be considered with that of renewing the existing guarantee, which will shortly expire. The financial results shown by the guarantee-system have not been encouraging, and it is clear that, if that system is to be continued, the conditions on which it is framed will require to be considerably remodelled.

There have been several changes in the guarantors' *dehats*, the particulars of which are given by the Superintending Engineer in his report, but it appears unnecessary to include them in this note.

NUDDEA RIVERS.

100. No capital or revenue accounts are kept for these works. It was stated in last year's revenue report that a proposal to transfer the management of these rivers from the Board of Revenue to the Public Works Department was under consideration. The transfer has since been accomplished, though not till the close of the year under report, during which the administration remained in the hands of the Board, through whom, as in previous years, the annual account of the revenue has been furnished to Government.

Revenue and Expenditure.

101. The receipts and working expenses for the past eight years are shown in the following statement:—

Year.	Receipts			Working expenses	Net revenue.
	Navigation	Miscellaneous.	Total.		
	Rs	Rs.	Rs.	Rs.	Rs
1880-81	2 31,957	676	2,32,633	1,21,846	1,10,787
1881-82	2,10,041	1,179	2,11,220	2,70,720	(−)59,500
1882-83	1,82 351	616	1,82 967	1,18 231	64,736
1883-84	2,00 908	1,926	2,02 834	1,22 378	80,456
1884 85	1,94,981	476	1,95,457	97,335	98 122
1885-86	1 83 382	399	1,83 781	77,668	1,06 113
1886 87 ...	2,02,707	543	2,03,250	60,213	1 43,037
1887-88	1,98 318	357	1,98,675	92,022	1,06,653

Thus, to compare with the previous year, there is a falling off of Rs. 4,575, or 2·1 per cent., in the receipts, coupled with a rise of Rs. 31,809, or 52 per cent., in the working expenses. The net revenue has consequently declined by Rs. 36,384, or 25 per cent.

Traffic.

102. The Administration Report submitted by the Commissioner of the Presidency Division through the Board of Revenue gives the following details of the number of boats which plied on the Nuddea rivers during the year compared with the year 1886-87:—

Year.	Number of Boats.					Number of Steamers and Flats.		Number of rafts, &c	Total number
	Below 100 maunds	Above 100 maunds	Passenger boats.	Empty boats.	Total boats.	Steamers	Flats		
1886 87 ..	1,284	29,919	23,951	11,192	65,640	354	121	755	66,870
1887-88 ..	1,789	28,711	22,433	11,994	64,927	351	81	560	65,919

The traffic during the last two years is shown in the following statement, of which the figures are taken from the monthly traffic returns:—

Year.	Number of boats.	Tonnage of boats.	Value of cargo.	Tollage (assessed or earnings).
	No.	Tons.	Rs.	Rs.
1886-87	66,313	828,539	3 57,12,518	2,02,611
1887-88	65,319	793,847	3,41,40,361	1,98,274

VALUE OF CROPS.

113. The approximate value of crops irrigated by Major Irrigation Works during the last two years is shown below:—

Canals.	1886-87.		1887-88.	
	Area irrigated.	Value of crops.	Area irrigated.	Value of crops.
	Acres.	Rs.	Acres.	Rs.
Orissa Canals	77,709	9,75,447	109,506	12,88,956
Midnapore Canal	69,762	15,34,764	65,864	13,17,280
Sone Canals	268,204	67,43,580	315,380	63,13,397
Total ...	415,675	92,53,791	490,750	89,19,633

It will be noticed that whereas there has been an increase in the area of over 75,000 acres, the value of the crops has fallen by Rs. 3,34,000, and further that this state of affairs is chiefly due to the figures for the Sone Canals, where, with an increase in the area of more than 47,000 acres, there is a decrease in the value of Rs. 4,30,000. It is quite possible for this to be the case even under ordinary fluctuations in the market price, but an analysis of the divisional figures gives the following somewhat curious results as regards the comparative values per acre of the chief crops in the three divisions:—

Crops.	Rates per Acre.					
	1886-87.			1887-88.		
	Eastern Sone.	Arrah.	Buxar.	Eastern Sone.	Arrah.	Buxar.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Sugarcane	7 2	100	100	3·6	40	100
Wheat	6·5	20	17·2	34	7·5	16·9
Barley	11·2	15	15	22 5	12 5	15
Rice	10·8	15·4	20	24	15	20
Miscellaneous cereals	6	15	25	12·5	12	14
Opium	375	35	50	75	40	50

The above rates, taken in combination with the areas of the respective crops, show that the curious diminution in value is due chiefly to the lower rate for sugarcane in the Arrah Division and for opium in the Eastern Sone Division. Considering the general steadiness of the rates in the Arrah and Buxar Divisions, the fluctuations in the Eastern Sone appear to call for explanation, as do the differences in the rates in the three divisions for sugarcane and opium. The Superintending Engineer's attention will be called to the matter, for, looking at this variety of rates, Statement III E cannot be considered trustworthy.

PLANTATIONS.

114. The state of the canal plantations on the major works is shown in the statement below:—

Canals.	1886-87.			1887-88.		
	Trees 12 feet high and above.	Saplings between 4 and 12 feet.	Seedlings.	Trees 12 feet high and above.	Saplings between 4 and 12 feet.	Seedlings.
	No.	No.	No.	No.	No.	No.
Orissa Canals ...	50,737	28,148	68,719	46,329	23,039	59,459
Midnapore Canal ...	5,023	5,109	4,452	6,770	4,795	4,822
Hidgellee Tidal Canal	942	4,316	2,780	1,172	3 875	3,121
Sone Canals ...	106,637	59,996	113,939	105,476	58,373	132,011
Total ...	163,339	97,569	189,890	159,747	90,082	199,413

The falling off of upwards of 18,000 trees on the Orissa Canals is ascribed to injury caused by excessive heat, storms, and white-ants

NAVIGATION RECEIPTS.

115. The following table shows the total of toll collections on the canals in Bengal, distinguishing between canals solely for navigation and those for irrigation and navigation, with percentage of cost of establishment for collection and cost of measuring each boat:—

	TOLL COLLECTIONS.		PERCENTAGE OF CHARGES FOR COLLECTION TO AMOUNT COLLECTED.		* COST OF MEASURING EACH BOAT.	
	1886-87.	1887-88.	1886-87.	1887-88.	1886-87.	1887-88.
Works partly for Irrigation and partly for Navigation.	Rs.	Rs.	Rs.	Rs.	*Annas.	Annas.
Orissa Canals	58,664	66,628	15·5	13·7	10·1	5·8
Midnapore Canal	1,09,693	1,26,574	6·9	6 1	2·6	2·5
Sone Canals	49,665	50.984	29·2	28·0	27·1	28 2
Total ...	2,18,022	2,44,186	14·3	12·7	7·2	6·0
Works for Navigation only.						
Hidgellee Tidal Canal ...	51.904	40,406	·5 8	7·4	2·7	3 5
Calcutta and Eastern Canals ...	4.73,193*	5.71.872*	8·9	6 8	4·6	3 7
Orissa Coast Canal ...	28,587	52,828	7 6	8·6	3·8	6·0
Nuddea Rivers	2,02,707*	1,98,318*	11·1	11·1	5·5	5·4
Total ...	7,56,391	8,63,424	9·3	7·9	4·7	4·2
GRAND TOTAL ...	9 74,413	11,07,610	......	......	......	......

* Do not include ferry tolls or miscellaneous receipts.

In the case of the canals for irrigation and navigation there is an increase in the toll collections of some Rs. 26,000, which is distributed over all the canals, the Orissa and Midnapore, however, being the chief contributors, the receipts having more than recovered the falling off which 1886-87 showed as compared with 1885-86. The toll collections under canals for navigation only show an increase of Rs. 1,07,000, the Calcutta and Eastern Canals being accountable for nearly 1 lakh of this and the Orissa Coast Canal for the remainder, having nearly doubled its income of the previous year. This increase, however, is reduced by the falling off in the other two canals. In the percentage of charges for collection on amount collected, and in the cost of measuring each boat, there is on the whole an improvement. The retrogression in the case of the Hidgellee Tidal Canal was due to the diminution of income caused by the closure, the establishment having to be continued, whereas that on the Orissa Coast Canal is owing to the canal being still in its infancy, whilst a full establishment has to be maintained.

COMMITTEE OF ENQUIRY, SONE CANAL.

116. A most noteworthy event of the year was the agitation on the Sone Canals, which resulted in the appointment of a Committee to enquire into the administration of those canals. The Committee duly submitted its report, which is still under consideration, it having been considered desirable, on account of the procedure adopted by the Committee who had only a very limited time allowed to them, to supplement their enquiry by further detailed reports and investigation as to much of the evidence placed before the Committee, which reports and investigations are only now approaching completion. It would therefore be premature to make any remarks upon the report of the Committee, which will be dealt with on a future occasion. In the meantime it appears only necessary to note briefly some of the effects produced by the appointment of the Committee.

Firstly, there is little doubt that it caused the cultivators to have an impression that rates were to be reduced, and that with retrospective effect, even to the extent of exempting them from the payment of arrears. Prompt payment was a thing therefore to be avoided, if possible, and the extensive failure of the sugarcane crop in many cases rendered payments difficult. The collections were in consequence considerably retarded, and to these two causes principally may be ascribed the falling off in the receipts and

the large increase in the outstanding balance on the Sone Canals of some Rs. 1,80,000 over the opening balance of the year. In a lesser degree the falling off in the receipts is due to the smaller area irrigated in the previous year. A second result was a large increase in the number of objections to assessment. Neither of these effects were unforeseen.

On the other hand, the agitation and consequent Committee have been undoubtedly beneficial to the establishment, and on this point I would make the following quotation from the report of the Superintending Engineer :—

"Apart from the report, the proceedings of the Irrigation Committee have led irrigation officers to carefully enquire into apparently well-grounded causes of complaint, and, as far as possible, to remedy them. Special care is being taken not to assess unauthorised irrigation, except on the fullest enquiry, the joint liability system in the case of five-years' leases has been nearly if not altogether abandoned, and a few five-years' leases which were entered into, and have proved unprofitable to the cultivators, have been cancelled. Coercive measures in realizing water-rates have been sparingly resorted to; in the Gya district there was not a single certificate case."

The agitation has to a great extent subsided, and the demand for long leases, except in one of the pergunnahs, has again become general. The crops of the present year promise to be good, and if they are so, there should be no real difficulty in realising the balances. In fact, good progress has been made in this particular already. Demand statements are being submitted at earlier dates, and this will permit of greater promptitude in realising the dues, and thus prevent arrears from accumulating. Another matter which is receiving considerable attention is the question of improving the village channels.

117. The date for the submission of revenue reports to the office of the Chief Engineer is the 15th September. The following statement shows the dates when the different reports were received :—

		In 1887.	In 1888.
Orissa Circle	Commissioner's report	21st September	26th October.
	Superintending Engineer's report	26th ditto	3rd ditto.
South-Western Circle	Commissioner's report	8th ditto	24th September.
	Superintending Engineer's report	26th October	Ditto.
Sone Circle	Commissioner's report	15th September	6th October.
	Superintending Engineer's report	Ditto	17th September

The reports were punctual with the exception of that of the Commissioner of the Orissa Division. The Finance and Administrative Accounts of the year 1887-88 were not received from the Examiner until the 4th September.

The delay in the submission of this note is to be regretted, but there has been a considerable increase to the work in this branch, and this combined with changes of officers has materially retarded its compilation.

C. W. I. HARRISON, LT.-COL., R.E.,
Offg. Chief Engineer.

The 4th March 1889.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 16th March 1889.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
		Western Districts.		
Burdwan Divn.	1	Burdwan Mar. 16, '89	Nil	Weather—seasonable. State and prospects of crops still very fair. The potato crop is extra good. Prices have again fallen at Burdwan to 21 seers per rupee, and are steady at 18 seers on an average for the district.
	2	Bankoora „ 16, '89	Nil	Weather—hot. *Rubbi* harvest nearly finished; average outturn 8 annas. Prices stationary.
	3	Birbhum „ 16, '89	Nil	The weather shows a tendency to rain. Prospects of crops continue good.
	4	Midnapur „ 16, '89	Nil	Weather—getting very warm. *Boro* crop is doing well. Fields are being ploughed in parts of the district.
	5	Hugli „ 16, '89	Nil	Weather—hot. Prospects of *boro dhan* good.
		Howrah „ 18, '89	Nil	Weather—seasonable. *Boro* crop doing well.
		Central Districts.		
Presidency Divn.	6	24-Perghs. Mar. 19, '89	Nil	Weather—hot and at times cloudy. Harvesting of *rubbi* crops over. Tillage continues. Manufacture of sugar going on.
	7	Nuddea „ 16, '89	Nil	Weather—seasonable. Harvesting of *rubbi* going on rapidly. Ploughing of land for next season's crop continues.
	8	Khoolna „ 16, '89	0·07	Weather—seasonable; days warm. Harvesting of *rubbi* continues. *Boro* paddy thriving.
	9	Jessore „ 16, '89	Nil	Weather—days hot and nights cool. Ploughing continues. Rain wanted for *dhan* and jute cultivation. Harvesting of *rubbi* crops going on.
	10	Moorshedabad „ 16, '89	Nil	Weather—getting warm daily; mornings fine and cool. Lands are being prepared for *aus*. *Rubbi* crops are being harvested.
Rajshahye Divn.	11	Dinagepur „ 16, '89	Nil	Weather—getting warm. Sugarcane is being cut and the yield is good. Prospects of winter crops fair.
	12	Rajshahye „ 16, '89	Nil	Weather—very hot. Cultivation of land going on for early crops. Pulses being harvested. Rice sells at 17 seers per rupee.
	13	Rungpur „ 16, '89	Nil	Weather—sultry during the day time with high westerly winds at constant intervals, cool at night. Paddy sowings are now completed. *Cheena* and *kawan* are also being sown largely. Rain is wanted
	14	Bogra „ 16, '89	Nil	Weather—dry and fine till 15th instant, when there was a slight storm after nightfall State and prospects of crops satisfactory. Sugarcane is still being crushed. Ploughing is going on. Common rice is selling at 21 seers a rupee.
	15	Pubna „ 16, '89	Nil	Weather—warm. *Rubbi* crops not doing well. Rain wanted. *Boro dhan* being sown.
	16	Darjeeling „ 16, '89	0·27	Rain has done much good. The crops both in head-quarters division and Silliguri are doing well. A heavy hailstorm reported from Kalimpong, damaging wheat and barley to some extent.
	17	Julpigoree „ 16, '89	Nil	Weather—days hot, nights and mornings cool. Wheat and tobacco are being gathered. Ploughing for *bhadoi* continues. No change in the price of rice.
		Eastern Districts.		
Dacca Divn.	18	Dacca Mar. 16, '89	0·11	Weather—days hot, nights cool. Ploughing for early rice and jute going on Sowing has commenced in low lands. *Boro* paddy thriving. Prospects of crops continue favourable. Rain is wanted.
	19	Furreedpur „ 16, '89	Nil	Weather—warm. Lands being prepared for *aus* and *amun* crops. Rain would be beneficial for sowings.
	20	Backergunge „ 14, '89	Nil	Weather—cool nights and mornings hot days. Prospects of crops fair. Rain is wanted.
	21	Mymensingh „ 15, '89	Nil	Weather—hot. Prospects of crops good. Rain wanted
Chittagong Divn.	22	Chittagong „ 19, '89	Nil	Weather—hot. Crops are suffering from want of rain Prices steady
	23	Noakholly „ 15, '89	Nil	Weather—seasonable. Harvesting of *rubbi* crops nearly finished Preparation of soil for *aus* crop going on. Rain is wanted
	24	Tipperah „ 14, '89	Nil	Weather—seasonable State and prospects of crops satisfactory.
	25	Chittagong Hill Tracts. „ 12, '89	Nil	Weather—cool at night, hot during day. *Jum* cutting continues. Tobacco and chillies doing well. Rain much wanted.
		Hill Tipperah „ 14, '89	Nil	Weather—warm. *Jum* cutting finished. Prospects of *boro* paddy and chillies in the plains fair.

	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.					
Patna Divn.	26	Patna	Mar. 16, '89	Nil	Weather—clear and warm. Prospects of *rubbi* generally favourable. Harvesting of *mussoor*, gram and mustard is almost completed, and wheat is being cut. Weather favourable to poppy. Prices stationary.
	27	Gya	„ 16, '89	Nil	Weather—hot. *Rubbi* being harvested and opium extracted.
	28	Shahabad	„ 16, '89	Nil	Weather—fine and hot. Reaping of wheat and barley has commenced. Weather favourable for collection of opium. *Cheena* is being sown and sugarcane planted. Prices stationary.
	29	Durbhunga	„ 16, '89	Nil	Weather—bright and hot. *Rubbi* crops are doing very well, being much improved by former rain and present favourable weather. Prices stationary.
	30	Mozufferpur	„ 16, '89	Nil	Weather—clear and warm. Harvesting of *rubbi* commenced An average outturn of 12 annas may be expected in the Hajeepore and Sudder sub-divisions and of 10 annas in Sitamurhi *Cheena* and *mung* coming up well. Indigo being sown. Collection of opium proceeding very satisfactorily
	31	Sarun	„ 16, '89	Nil	Weather—hot and seasonable. *Rubbi* harvesting going on; outturn about 14 annas expected. Poppy is a short crop of 12 annas. Indigo sowings are over and the crop is doing well.
	32	Chumparun	„ 16, '89	Nil	Weather—fair and warm; getting hot. Harvesting of *rubbi* going on. Opium extraction progressing. Indigo being sown. *Cheena* germinating freely, and germination coming on well. Prices stationary.
Bhagulpore Divn.	33	Monghyr	„ 16, '89	Nil	Weather—bright and hot. East wind prevailing since last three days. Harvesting of *rubbi* crops has commenced; outturn expected to be 12 annas.
	34	Bhagulpur	„ 16, '89	Nil	Weather—seasonable, but less west wind than usual. Harvesting of oilseeds and pulses continues. Standing crops fair. Prospects of *mohua* hopeful, but not yet assured. Mango blossoms not good. Prices fairly steady.
	35	Purneah	„ 16, '89	Nil	Weather—getting very warm; seasonable. The *rubbi* outturn will be a good one on the whole.
	36	Maldah	„ 16, '89	Nil	Weather—bright, warm and calm. Harvesting of *rubbi* crops commenced; about 12 annas outturn expected. *Boro* plants are still being planted and thriving. A shower of rain now would do good.
	37	Sonthal Perghs.	„ 16, '89	Nil	Weather—dry and warm. Reaping of *rubbi* proceeds. Prospects good. Sugarcane doing well. *Mohua* beginning to drop.
ORISSA.					
Orissa Divn.	38	Cuttack	„ 15, '89	Nil	Weather—hot and seasonable. *Dalua* rice in ear. Ploughing for *beali* and *saiad* rice has commenced in some places. Common rice sells at 17 seers 1 chittack per rupee in town.
	39	Pooree	„ 14, '89	Nil	Weather—seasonable. *Dalua* rice is in ear. *Mung* is in flower. *Kulthi* is being gathered. Common rice 17 seers 6 chittacks per rupee in the Sudder sub-division and 15 seers 6 chittacks in the Khoorda sub-division.
	40	Balasore	„ 15, '89	Nil	Weather—getting warmer. Rain very much wanted. Prices stationary.
CHOTA NAGPORE.					
South-West Frontier Agency.					
Chota Nagpore Divn.	41	Hazaribagh	Mar. 15, '89	Nil	Weather—seasonable; getting warm. *Rubbi* still being harvested; outturn 6 to 12 annas. Sugarcane doing well. *Mohua* beginning to fall in parts of the district. Prices as before.
	42	Lohardugga	„ 16, '89	Nil	Weather—getting warm. *Mohua* crop is reported to have suffered somewhat in Palamow owing to the weather being unusually cold during the week. *Rubbi* being threshed. Prices steady.
	43	Singbhoom	„ 15, '89	Nil	Weather—hot in the day, cold at night. The little *rubbi* left is being harvested. Prices stationary.
	44	Manbhoom	„ 16, '89	Nil	Weather—hot; cool nights. *Rubbi* being gathered; outturn varies from 8 to 12 annas. Prospects of *mohua* are not good; outturn estimated at 8 annas. Prices stationary.

Published for general information.

The average fall of the corresponding period for 24 years, S. G.'s Office ...	0·19
The total fall from 1st January to 16th March 1889	2 90
The average fall of the corresponding period for 24 years, S. G.'s Office ...	2·37

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, ═ fog, ⌂ dew.

A. Pedler,

For Offg. Meteorological Reporter to the Govt. of India.

Meteorological Office, Govt. of India;
Calcutta, the 18th March 1889.

* Mean of six days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years.

The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 21 stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

for the week ending Friday, the 15th of March 1889.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at co-operating station.	DISTRICT OBSERVATIONS. RAINFALL. Of week. Mean for district.	Of week. Normal mean. Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA *the* 19*th March* 1889.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 15TH OF MARCH 1889.

Fino settled weather obtained in Bengal at the close of the previous week. Southerly winds had set in at the southern stations, and temperature had commenced to rise rather rapidly; pressure was also high and generally considerably above the normal. For the first four days of the present week pressure generally fell slowly, the fall from the 11th to the 12th being brisk in Upper India, so that towards the close of the week the pressure distribution over Northern India was becoming similar to that which usually obtains during the hot season. On the 14th this distribution was clearly noticeable, though at the same time there was a feeble depression overlying Chutia Nagpur and the eastern districts of the Central Provinces. With the gradual establishment of the hot-weather distribution of pressure, the southerly winds blowing at the head of the Bay commenced to strengthen rapidly and to penetrate to a considerable distance inland, and considerable amounts of moisture were thus brought up to the province. These conditions, together with perhaps the slight disturbance due to the feeble depression over Chutia Nagpur on the 14th, caused a few unimportant local storms or nor'-westers on the 14th and 15th, some of which were accompanied with rain. The only areas, however, over which these rain showers were of any importance were Khoolna, Nuddea and the Darjeeling Hills district, and the only stations at which the falls were heavy were Satkhira 1·25 inches, Chooadanga 0·90 inch, and Kalimpong 1·42 inches. At the close of the week, therefore, the general weather conditions had become almost those characteristic of the hot season in Bengal.

Pressure.—Except for the fairly steady fall which has generally taken place during the week, the pressure changes do not call for any comment. For the whole week the mean pressure over the province, taking into consideration the most reliable stations in Bengal, has been 0·013 inch in excess of the normal for the period. This excess pressure has also been fairly equally distributed.

Temperature.—The principal feature in the temperature changes during the week has again been the steady increase which has taken place. Thus, taking the mean temperature of all the districts of the province into consideration, there has been an increase of 4° during the week, for while the mean of the day and night temperatures of the whole province during the week ending March 8th was 74°, for the past week it has been 78°. This increase has perhaps been more marked in the day than in the night temperatures, and some decidedly high day or maximum temperatures have been reported during the week; thus at Cuttack on the 13th a temperature of 101·9° was registered; on the 14th at Midnapore temperature was 99·8° and at Burdwan 99·7°; and on the 15th at Chyebassa a temperature of 101·0 was recorded. For the whole week the mean temperature of the province has been about one-and-a-half to three degrees above the normal for the period.

The numbers in the following table will show the general distribution of temperature during the week. In the table are given the average maximum, minimum and mean temperatures for the week at nine typical stations in different districts in the province, compared with the normal values for the period:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 15th March 1889.

	Normal mean maximum temperature for the week ending 15th March.	Actual mean maximum temperature for the week ending 15th March 1889.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 15th March	Actual mean minimum temperature for the week ending 15th March 1889.	Variation of actual mean from the normal	Normal mean daily temperature for the week ending 15th March.	Actual mean daily temperature for the week ending 15th March 1889. Darjeeling	56·3	57·1	+0·8	41·6	43·2	+1·6	49·0	50·2	+1·2

Rainfall.—As previously stated, only one or two stations in the province have received rainfalls of any importance during the week, and in no large meteorological district do the amounts recorded average more than a few thousandths of an inch. Behar and Chutia Nagpur have been absolutely rainless.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 15th of March 1889:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week			Rainy days.			Since 1st of month.		Since 15th May 1888.

A. Pedler,
For Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

From the annexed table exhibiting the vital statistics of the principal Municipalities in Bengal for the week ending 2nd March 1889, it appears—

1. That the birth-rate in these Municipalities amounted to 22·6 per 1,000 of population against very nearly the same proportion, viz., 22 4 per 1,000 in the preceding week ending 23rd February, and the death rate to 22·7 per 1,000 against 25·8 per 1,000 in the previous week, indicating a considerable falling off in the registration of deaths.

2. That births and deaths were reported to have been recorded at the highest rates in the following Municipalities :—

Births.

	Ratio per *mille.*
Burdwan	90·0
Comillah	67·8
Rampore Beauleah	52·5
Naraingan j	45 5
Serampore	39·3
Kishnaghur	37·8
Howrah	31·5
Monghyr	30·7
Hughli	29 5

Deaths.

	Ratio per *mille.*
Burdwan	70·2
Suburbs of Calcutta	46 3
Purneah	38·1
Serampore	29·4

3. That, as compared with the results of the preceding week, there was a diminution of mortality from all diseases, excepting cholera and injury :—

	Ratio per *mille* during the weeks ending— 2nd March 1889.	23rd Feb. 1889.
Cholera	4·2	3·4
Small-pox	·1	·2
Fever	9·1	10 9
Bowel-complaints	3·0	4·1
Injury	·5	·2
Other causes	5·8	6·9

4. That the following Municipalities suffered in a more marked degree than the others from cholera, fever and the maladies grouped under the head of "Other causes" :—

Cholera.

	Ratio per *mille.*
Bali	17·5
Suburbs of Calcutta ...	12·4
Burdwan	12·2
Howrah	8 6
Hughli	5·4

Fever.

	Ratio per *mille.*
Burdwan	35·1
Purneah ...	31·2

Other causes.

	Ratio per *mille.*
Burdwan	18 3
Suburbs of Calcutta ...	10·3

5. That the death-rates according to *Sex*, *Class* and *Age*, stood as shown below :—

According to Sex.

	Ratio per *mille.*
Males	25·5
Females	19·6
Ratio of male deaths to every 100 female deaths	148

According to Class.

	Ratio per *mille.*
Christians	21·7
Hindus	23·5
Mahomedans ...	21·2

According to Age.

	Ratio per *mille.*
Under 1 year ...	159·5
1 and under 5 years ...	23·7
5 „ 10 „ ...	9·5
10 „ 15 „ ...	8·6
15 „ 20 „ ...	20 9
20 „ 30 „ ...	17·1
30 „ 40 „ ...	18·7
40 „ 50 „ ...	17·2
50 „ 60 „ ...	27·9
60 years and upwards ...	49 7

W. H. Gregg, *Dip. Publ. Health, Camb.*,
Sanitary Commissioner for Bengal.

The 18*th March* 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

Comparative Statement of the principal commodities carried by the Eastern Bengal State Railway during the month of December 1888.

INCREASES.

	Tons.
Coal ...	4,120
For Railway and Flotilla consumption: also for brick burning for the Kidderpore docks.	
Jute ...	7,975
This increase is principally from the Northern Section, including the Raiganj Extension. Damukdia Ghât, Kooshtea, Serajganj, Dacca and Mymensingh show large decreases. There are increases from Goalundo and Pangsa. A firm market in Calcutta during the month.	
Oilseeds ...	372
A demand for linseed for the United States in the early part of the month probably influenced this increase. The London prices, however, collapsed, and the market at the close of the month was depressed.	
Railway plant, &c. ...	2,189
Repairs and renewals.	
Salt ...	1,722
Exclusively from Chitpore	
Sugar ...	363
All sugar-exporting stations show small increases under this head.	
Firewood ...	773
From the Southern Section.	

DECREASES.

	Tons.
Rice ...	2,988
Large decreases from Hilli, Jaipurhat, Nowabganj, Sultanpur and Sara.	
Jute, screwed ...	694
Falling off in despatches from Dacca.	

Calcutta, the 16*th March* 1889.

Comparative Statement of the principal commodities carried over the Bengal Central Railway during the month of December 1888.

INCREASES.

Coal 1,212
Chiefly for railway and Flotilla consumption.

Jute 614
Principally from Khulna, Singia, and Nawapara; but the increase has been general.

Sugar 145
Gobordanga and Jhikargachi contributed this increase.

DECREASES.

Rice 618
Khoolna and Singhia both show large decreases in this commodity, due to excessive rainfall.

Betelnuts 411
The large falling off is from the B. C. F This traffic seems to be coming into Calcutta by country boats,

REVISED RULES UNDER THE INDIAN CHRISTIAN MARRIAGE ACT XV OF 1872.

GENERAL DEPARTMENT—ECCLESIASTICAL.

Calcutta, the 24th March, 1889.

RESOLUTION.

READ again—

Government Resolution, dated the 11th December, 1888, published in Part I of the *Calcutta Gazette* of the 12th idem, prescribing rules under the Indian Christian Marriage Act XV of 1872.

It has been pointed out that in paragraph 1 of the Resolution quoted in the preamble, reference should be made, not to Act VI of 1871, but to Act XII of 1887, and also that, as regards the supply of stationery, more detailed rules should be prescribed. The Lieutenant-Governor is therefore pleased to direct that the following shall be substituted for the paragraph and rules bearing the corresponding numbers in the Government Resolution of the 11th December referred to above.

PARA. 1.—In accordance with the provisions of section 85 of the Indian Christian Marriage Act XV of 1872, the Lieutenant-Governor is pleased to determine that the District Judge for the purposes of the Act shall be the District Judge appointed under the provisions of Act XII of 1887 (the Bengal Civil Courts Act, 1887), and that his jurisdiction shall extend to the local limits fixed by the Local Government under section 13 of Act XII of 1887.

HEAD VIII.—*General rules relating to the foregoing subjects.*

RULE 2.—Government will supply registers and forms to Marriage Registrars. It will supply the first full set of registers and forms to licensed ministers and to persons authorized to grant certificates of marriage between Native Christians, but subsequent supplies of registers and forms must be paid for out of the fees received and obtained from the Superintendent of Stationery, Calcutta, who will intimate to the indenting officer the cost of the forms required. The indenting officer should then send to the nearest civil treasury the amount notified by the Superintendent of Stationery as the cost of the articles required by him, accompanied by a challan in duplicate, which should quote the month and date of the estimate of the Superintendent of Stationery. One copy of the challan will be retained by the treasury, and the other returned duly receipted to the payer of the money to be forwarded to the Superintendent of Stationery to enable him to comply with the indent.

Forms.

RULE 3.—Indents for forms required by the Registrar of the Archdeaconry, the Senior Chaplain of the Church of Scotland, the Archbishop of Calcutta, and the Vicar-General of the Portuguese Missions in Bengal, should be submitted by them to the Superintendent of Stationery.

RULE 4.—All other indents for register books and forms should be made by or through the Commissioner of the Division, or by or through the Senior Marriage Registrar, Calcutta, on the Superintendent of Stationery.

RULE 5.—Forms of indent, containing lists of the books and forms for which each officer can indent, will be found in Appendices 7(*a*) to 7(*d*).

ORDER.—Ordered that a copy of this Resolution be forwarded to all Commissioners of Divisions for their own information and guidance, and for circulation to Senior Marriage Registrars, to Marriage Registrars, and to Ministers licensed or otherwise legally authorized to solemnize marriages within their respective divisions. A list of Marriage Registrars (other than district officers) and of licensed Ministers is herewith forwarded.

Also, that a copy of this Resolution be forwarded to the Registrar-General of Births, Deaths and Marriages, Calcutta, and to the Senior Marriage Registrar, Calcutta, for their own information and guidance, and for circulation to Marriage Registrars and to Ministers licensed or otherwise legally authorized to solemnize marriages within their respective jurisdictions.

Also, that a copy be forwarded to the Ven'ble the Archdeacon of Calcutta, with a request that he will be so good as to cause the Resolution to be distributed among Chaplains and Clergymen acting under the Bishop's license in Bengal.

Also, that a copy be forwarded to the Registrar of the Archdeaconry for information.

Also, that a copy be forwarded to His Grace the Archbishop of Calcutta for information.

Also, that a copy be forwarded to the Very Reverend the Vicar-General of the Portuguese Missions in Bengal for information.

Also, that a copy be forwarded to the Senior Chaplain of the Church of Scotland for information.

Also, that a copy be forwarded to the Superintendent of Stationery for information.

Also, that a copy be forwarded to the Accountant-General for information.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

SCARCITY IN THE PATNA DIVISION.

REVENUE DEPARTMENT—FAMINE.

Calcutta, the 26th March, 1889.

RESOLUTION.

READ—

A letter No. 166G.F., dated the 20th March, 1889, from the Officiating Commissioner of the Patna Division, reporting on the prospects of the crops and the condition of the people in the districts of that Division during the fortnight ending the 15th idem.

The outturn of the present *rabbi* harvest appears to be fulfilling anticipations, and the condition of the people on the whole is as good as was to be expected. The only places as to the adequacy of the arrangements for which doubts are intimated are Balwa and Madhwapore, in the district of Durbhunga; and the Lieutenant-Governor observes with pleasure that the Commissioner has proceeded to the spot to satisfy himself on this point. The relief afforded in the district of Mozufferpore by the Maharajah of Durbhunga, the Rajah of Sheohur, Baboo Deonundan Singh, and the Sursund zemindars, is remarked by the Lieutenant-Governor with much satisfaction.

2. It has not been deemed necessary to publish the reports submitted between the date of His Honour's visit to Behar, when the result of the partial failure of the rice crop was ascertained, and that of the present letter written when the outturn of the *rabbi* harvest could be stated, as no material change occurred in the interval. The present report and this Resolution will be published in the next issue of the *Calcutta Gazette.*

ORDER.—Ordered that a copy of this Resolution be forwarded for the information of the Commissioner.

Ordered also that a copy of this report and Resolution be submitted for the information of the Government of India.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

SCARCITY IN THE PATNA DIVISION.

THE following report is published for general information.

By order of the Lieutenant-Governor of Bengal,

REVENUE DEPARTMENT;
CALCUTTA,
The 26th March, 1889.

P. NOLAN,
Secy. to the Govt. of Bengal.

No. 166G.F., dated Bankipore, the 20th March, 1889.

From—JOHN BOXWELL, ESQ., Offg. Commissioner of the Patna Division,
To—The Secretary to the Government of Bengal, Revenue Department.

I HAVE the honour to submit my report on the prospects of the crops and the condition of the people in the districts of this Division for the fortnight ending the 15th March, 1889.

SARUN.

2. The Collector writes:—

"The rain which fell at the end of the preceding fortnight injured both the poppy and the *rubbi* crops. The former now gives a prospect of 12 annas and the latter of 14 annas outturn."

The prices of some of the food-grains have fallen owing to the introduction of new grains—

Wheat	...	...	...	... from 15 to 16 seers.
Barley	...	...	...	... „ 21¾ „ 25½ „
Indian-corn	...	...	...	... „ 21⅛ „ 24½ „
Rahar	...	...	...	... „ 21 „ 21¼ „

The Collector has forwarded a statement, from which it appears that 1,27,358 maunds of food-grains, principally Indian-corn, were imported, and 7,655 maunds exported during the fortnight: 75 per cent. of the imports were by boat.

PATNA.

3. The Collector writes:—

"The weather during the past fortnight has been favourable to the *rubbi* harvest which is now being gathered. Considerable damage has been done by rain, and in some parts of Behar and Dinapore by hail, during the previous fortnight. The crops already gathered suffered most, as not only was the grain damaged, but the stalks and leaves were rendered unfit for fodder As far as can be judged at present, the outturn of the *rubbi*, including poppy, will be fair in all parts of the district, except in Behar, where the estimated yield does not exceed 9 annas In the Behar sub-division the rice crop suffered most from the floods and subsequent drought, where also, especially in the extreme south, hail caused the greatest injury; so it is this part of the district which furnishes most ground for anxiety. Up to the present, however, the people have been able to maintain themselves, and the Sub-divisional Officer does not anticipate that it will be necessary to open relief works."

Prices are reported to be nearly stationary with a slightly downward tendency.

SHAHABAD.

4. The Collector writes:—

"The harvesting of the *rubbi* is in progress all over the district, and, excepting the limited areas affected by hailstorms, there is every reason to hope for a good outturn of the crops, especially of wheat and barley. The general condition of the people is, on the whole, tolerably good, and, as far as is known, there is at present no ground for anxiety."

The following quotations are given:—

Common rice	...	...	...	16 seers.
Barley	...	...	...	25 „
Wheat	...	...	...	14-15 „
Makai	...	...	...	20 „
Rahar	...	...	...	18 „

It will be seen that, compared with the previous fortnight, prices show a decided downward tendency.

GYA.

5. *Area affected.*—As last reported.

6. *General state of the affected area.*—The Collector writes:—

"At present the cultivators, as well as the labourers, have ample work in harvesting the *rubbi* crops. Taking into consideration the damage done by hail and rain, the outturn of the *rubbi* is estimated at from 10 to 11 annas. There was no rain during the fortnight."

7. *Public works open.*—The District Board's works opened in Kowakol attracted no labourers.

On civil agency works under payment-by-results and task-work systems	482
On works carried out through tuccavi loans	200
Total ...	682

As the Collector considers that there will be a demand for work in April and May, I have placed myself in correspondence with the Superintending Engineer, Sone Circle, regarding the Saranwan pyne. If the project is approved, the services of a competent Engineer will be required to lay out the channel and prepare working sections.

At present in this district there is little demand for labour.

8. *Gratuitous relief.*—Expenditure *nil.*

9. *Advances.*—No advances have yet been made under the Land Improvement Act, the enquiries not being complete. Rupees 325 were advanced during the fortnight under the Agriculturists' Loans Act.

MOZUFFERPORE.

10. *Area affected.*—Unchanged.

11. *General state of the affected tracts.*—There is practically no change to note. The Collector writes :—

"The prospects of the *rubbi* crop continue good, and a general outturn of 8 annas may be expected in the affected area, while for the entire sub-division (Sitamarhi) I estimate an average of at least 10 annas.

"Near Majargunge the prospects of the *rubbi* are reported to be particularly good. *Cheena* and *mung* are coming up well and promise a satisfactory crop, but much depends on the weather for the next month or six weeks.

"The prospects of the *rubbi* crops throughout the district south of the affected area are excellent. Harvesting has now commenced, and I have no doubt that a good average outturn will be obtained."

12. *Public works open.*—From the annexed statements it will be seen that there were 3,964 persons on the District Board's works, on civil agency works there were 792 persons, and on private agency works 6,935 persons, making a total of 11,691 persons labouring on the various works. The increase in the figures of the last fortnight is considerable. As previously noted, the attendance on the 27th February on the Board's works was much larger than shown in the figured statement submitted with the last report. Discounting, however, this additional number, the figures for the fortnight ending the 15th March show a marked increase.

An average daily number of 2,910 persons received gratuitous relief from the Maharajah of Durbhunga, the Rajah of Shewhur and his uncle Baboo Deonundun Singh, and the Sursund zemindars. In this district private agency has relieved the State of the greater part of the burden of relieving distress.

13. *Grain stock and selling prices.*—I append a price-current. Prices on the whole are fairly stationery. Stocks continue to be sufficient. The barley and wheat now being harvested may be expected in the market shortly, and this increase in the food-supply may have the effect of lowering prices generally.

14. *Gratuitous relief.*—The expenditure at the cost of Government under this head was Rs 86-3-3.

15. *Advances.*—An advance of Rs. 400 under the Land Improvement Act is reported.

DURBHUNGA.

16. *Area affected.*—No alteration.

17. *General state of affected tracts.*—The Collector writes :—

"Mr. Greer's report and the fuller details in his diary for the same period show that there has been no appreciable accentuation of distress during the last fortnight except in the neighbourhood of Madhwapore; that the ordinary works have even there proved sufficient up to the date of this report to avert suffering; that still there is a growing number of beggars owing to pressure in Nepal, and this will be met by the special relief tank he has now actually started at Banshi Behari.

"The Police Inspector reports from Madhubani that poor people in Benipatti, Harlaki, Khajowli, Ladownia, Deodha, Phulpras, Lowkahia, Lowkahi and Mudheypore are in want. He, however, adds that the tobacco poppy and *rubbi* crops are in good condition, and that *mung, cheena, marwa* and *sawan* are being sown. As Mr. Greer has been through all his circles, and has kept a careful diary and has been in communication with his circle officers, I think we may accept the above as simply meaning that prices are high and people require work. Crime, however, has increased, mostly due to dark nights."

Mr. Greer writes :—

"I have toured throughout the four circles during the past fortnight, and have noticed no change in the general state of the affected tracts except in Circles A and B, where the ordinary works which have been opened since the 1st instant have relieved the pressure and satisfied to a large extent the demand for employment. During my late visit to Balwa (on the 12th) the demand for further relief was less pressing, but the large number of children, aged and infirm persons wandering in search of alms around this place and Madhwapore still points to the need of opening special works to meet these cases."

From the Collector's report I see that work has been opened on a tank here under special conditions which admit of the tasks being adjusted to the physical capabilities of the labourers. Mr. Greer continues—

"I have lately toured through Circle B, and am of opinion that there is no need yet of any special treatment, our ordinary works being sufficient at present to maintain the needy

portion of the population. In Circles C and D the condition of the working classes is more satisfactory; on several roads there is little or no demand for employment, labourers being fully engaged in cultivation. A considerable increase may be expected to the number now working on the roads on the completion of these field operations."

Cheena sowing is reported to have been completed: this crop will require rain before long to ensure a full outturn.

In the Sudder sub-division rice and *mung* are being sown together in certain limited areas. The mustard, wheat, barley, *masoor* and linseed crops are estimated at 12 annas. In Tajpore the prospects of the *rubbi* are excellent.

18. *Public works open.*—From the return appended, it will be seen that there was a decrease in the number of persons on the District Board's works for the week ending 9th March as compared with the figures for the preceding fortnight. The return for the second week in March has not been submitted. This decrease, however, is probably more apparent than real, as the returns submitted are not complete The actual number according to these returns on the District Board's works on the 9th March was 3,349. Figures have not been given of the attendance on civil agency works.

The returns for attendance upon works carried out by private agency are so incomplete as to be of no value.

The Collector will be asked to give information under these heads in fuller detail with his next narrative.

19. *Stocks of grain and selling prices.*—There has been little or no variation in the selling prices of food-grains during the fortnight. A price-current showing quotations at the principal marts in the several circles is forwarded. It is said that large stocks of grain are being carted to the northern portion of Circles A and B from Bhagulpore and south-eastern part of the Madhubani sub-division.

The steadiness of prices shows that stocks are sufficient. It is noticeable that the quotations are lower in this district than the adjoining district of Mozufferpore.

20. *Gratuitous relief.*—Expenditure *nil.*

21. *Advances.*—No advances have been made under the Land Improvement or Agriculturists' Loans Act during the fortnight.

22. *Crime*—There has been an increase in reported crime in the different tracts. This increase the Sub-divisional Officer attributes to an influx of Nepalese. It is no doubt in part attributable to the distress resulting from high prices. It is not, however, sufficiently marked to call for any special comment.

CHUMPARUN.

23. *Area affected.*—Remains the same.

24. *General state of the affected tract.*—The harvesting of the *rubbi* continues. The Collector writes:—

"Favourable weather prevailed during the fortnight: easterly winds in the morning, dying down from midday, and sometimes succeeded by westerly winds in the afternoon. This conjunction is locally known as *dooas* and is most favourable for agricultural operations. Numbers of labourers find employment in gathering the *rubbi* harvest The *cheena* crop is safe wherever there is artificial irrigation, and elsewhere is still promising well."

25. *Public works open.*—The numbers of works open are—

(*a*)	Under District Board	3
(*b*)	" Civil agency	41
(*c*)	" Private relief agency	3
(*d*)	Carried on through tuccavi loans	44

The average number of persons daily on the above works is, according to the returns herewith submitted—

District Board's works	322
Civil agency	5,320
Private "	795
On works carried out through tuccavi loans (no returns)	600
Total ...	7,037

The figures of attendance (if the numbers on tuccavi loans works, which were not included in the last report, be excluded) show no increase on those for the preceding fortnight. It will be seen from the figured statement that ample employment is provided for all classes, and for the infirm, old and young.

26. *Stocks and selling prices.*—No depletion of stocks is reported. Prices are fairly stationary. The following quotations are given :—

Coarse rice	13½ to 14¼ seers.
Indian-corn	18¾ to 19½ „
Keshari	24$\frac{6}{25}$ seers.

27. *Gratuitous relief.*—Rupees 121-15 were expended in giving gratuitous relief.

28. *Advances.*—The following advances were made during the fortnight :—

	Rs.
Under Land Improvement Act	2,110
Under Agriculturists' Loans Act	5,621

29. I summarise the points of interest in the present report—

(1) Except in Mozufferpore, there has been no increase in the number of labourers on the works as compared with the figures for the preceding fortnight.

(2). Prices remain fairly stationary, a downward tendency being apparent in some districts. Stocks everywhere are said to be sufficient.

(3). In Chumparun a large number of works have been opened, and elaborate provision has been made for affording employment to the infirm, old and young upon these works, so that they can earn their day's ration without going far from their homes. In this district I understand that all the money allotted under the Agriculturists' Loans Act has been, or is about to be, distributed. The return now submitted does not make this clear, as the accounts had not been fully written up at the time of the submission of the reports. These advances, which have been cautiously made to petty agriculturists and others, will have the effect of preventing them from selling *rubbi* crops at a sacrifice, and will tend to keep them off the works.

(4). In Mozufferpore private agency has come to the assistance of the State in a very marked way in providing employment for, and giving gratuitous relief to, distressed persons.

(5). In Durbhunga around Balwa and Madhwapore distress is more marked than elsewhere. The Sub-divisional Officer reports that he has come across beggars and children wandering in search of alms.

Crime also has increased slightly. These unfavourable symptoms have shown themselves, however, in only two localities. It does not appear that private agency in this district has as yet done much towards bearing its share of relieving distress. Advances under the Agriculturists' Loans Act have been given out on a very limited scale and no gratuitous relief, as the task-work system is only now being introduced. I have proceeded on tour to Circles A and B with a view to satisfying myself that the measures which it is now proposed to adopt are sufficient. I hope in my next report to be able to submit information regarding this.

(6). Gratuitous relief continues to be given with due discretion at the expense of the State, and up to date, except from Durbhunga, where the cases are few and are being carefully watched, no reports have been received which indicate that extreme pressure is being felt by any classes of the community.

(7). With my next report I will submit a financial statement showing the allotments made and the expenditure actually incurred in all districts from the commencement of operations up to the 1st April.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 23rd March 1889.

	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years.
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 21 tations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.
